

FY 2017

FINANCIAL REPORT

OF THE UNITED STATES GOVERNMENT

DEPARTMENT OF THE TREASURY
WASHINGTON,
D.C.

SECRETARY OF THE TREASURY

A Message from the Secretary

I am pleased to present the 2017 *Financial Report of the United States Government*. This Report is a thorough overview of the federal government's current financial position and future fiscal projections.

The country enjoyed a pick-up in growth in 2017. Unemployment is at its lowest level since February 2001, consumer and business confidence are at two-decade highs, and inflation is low and stable. President Trump and this administration are committed to building on these dynamic trends and delivering robust, sustained growth to the U.S. economy. The historic *Tax Cuts and Jobs Act* passed last year is already spurring greater investment in this country and making our businesses more competitive. Our ongoing efforts to provide relief from burdensome overregulation will help improve our economic climate.

The Report discusses current trends in revenues, costs, deficit, and debt. It also highlights the Government's long-term fiscal challenge of funding the Social Security, Medicare, and Medicaid programs.

When making policy decisions, it is essential that we have transparency with respect to our federal government's finances. This Report is a part of that transparency and one that should help facilitate open and productive dialogue to ensure a prosperous future for the American people.

Steven T. Mnuchin

RESULTS IN BRIEF

Highlights of the FY 2017 Financial Report of the U.S. Government

Where We Are Now

The Government's net cost before taxes and other revenues for FY 2017 was \$4.5 trillion - an increase of \$128.8 billion (2.9 percent) from FY 2016.

Net cost equals gross costs of \$4.6 trillion, less earned program revenues (e.g., Medicare premiums, national park entry fees), and then adjusted for gains or losses from assumption changes used to estimate future federal employee and veterans benefits payments.

The increase in net cost is the combined effect of many offsetting increases and decreases across the Government.

Total Government tax and other revenues grew by \$29.3 billion (0.9 percent) to about \$3.4 trillion for FY 2017.

The Government deducts \$3.4 trillion in tax and other revenues from its \$4.5 trillion net cost (with some adjustments) to derive its FY 2017 "bottom line" net operating cost of \$1.2 trillion.

By comparison, the Government's budget deficit for FY 2017 was \$665.7 billion – an increase of \$78.3 billion (about 13.3 percent) over FY 2016. The \$491.0 billion difference between the budget deficit and net operating cost is primarily due to accrued costs (incurred but not necessarily paid) that are included in net operating cost, but not the budget deficit. These include but are not limited to estimated future costs of federal employee and veterans benefits.

Where We Are Headed

The primary deficit is the difference between non-interest spending and receipts. As a ratio relative to GDP (the primary deficit-to-GDP ratio), it is useful for gauging long-term fiscal sustainability.

This ratio spiked from 2009 through 2012 due to the financial crisis, the ensuing severe recession, and increased spending and temporary tax reductions enacted to stimulate the economy and support recovery. As an economic recovery took hold, the primary deficit-to-GDP ratio fell, and is projected to shrink further through 2021 as discretionary spending limits remain in effect and economic recovery boosts tax receipts.

After 2021, increased spending for Social Security and health programs due to the continued retirement of the baby boom generation and increases in health care costs is projected to result in increasing primary deficits through 2038. After 2038, the ratio slowly declines as the aging of the population slows. These projections do not include the effects of the *Tax Cuts and Jobs Act of 2017*.

Projections in the *Financial Report* indicate that the Government's debt-to-GDP ratio is projected to remain relatively stable over the next decade, and then continuously rise over the remaining projection period and beyond if current policy is kept in place. This trend implies that current policy is not sustainable.

As long as changes in policy are not so abrupt as to slow economic growth, the sooner policy changes are adopted, the smaller the changes to revenue and/or spending will need to be to return the Government to a sustainable fiscal path.

NATION BY THE NUMBERS		
A Snapshot of The Government's Financial Position & Condition		
	2017	2016*
Financial Measures (Dollars in Billions):		
Gross Costs	\$ (4,609.3)	\$ (4,515.7)
Less: Earned Revenue	\$ 431.9	\$ 383.9
Gain/(Loss) from Changes in Assumptions	\$ (356.5)	\$ (273.3)
Net Cost	\$ (4,533.9)	\$ (4,405.1)
Less: Total Tax and Other Revenues	\$ 3,374.6	\$ 3,345.3
Unmatched Transactions and Balances	\$ 2.6	\$ 8.1
Net Operating Cost	\$ (1,156.7)	\$ (1,051.7)
Budget Deficit	\$ (665.7)	\$ (587.4)
Assets:	\$ 3,480.7	\$ 3,534.8
Less: Liabilities, comprised of:		
Debt Held By the Public & Accrued Interest	\$ (14,724.1)	\$ (14,221.1)
Federal Employee & Veteran Benefits	\$ (7,700.1)	\$ (7,209.4)
Other	\$ (1,472.7)	\$ (1,401.1)
Total Liabilities	\$ (23,896.9)	\$ (22,831.6)
Net Position (Assets Less Liabilities)	\$ (20,416.2)	\$ (19,296.8)
Sustainability Measures (Dollars in Trillions):		
Social Insurance Net Expenditures	\$ (49.0)	\$ (46.7)
Total Federal Non-Interest Net Expenditures	\$ (16.2)	\$ (10.6)
Sustainability Measures as Percent of Gross Domestic Product (GDP):		
Social Insurance Net Expenditures	(4.0%)	(3.8%)
Total Federal Non-Interest Net Expenditures	(1.2%)	(0.8%)
Fiscal Gap ¹	(2.0%)	(1.6%)
*Restated (See Financial Statement Note 1.V)		
¹ To prevent the debt-to-GDP ratio from rising over the next 75 years, a combination of non-interest spending reductions and receipts increases that amounts to 2.0 percent of GDP on average is needed (1.6 percent of GDP on average in 2016). See Financial Statement Note 23.		

Executive Summary to the Fiscal Year 2017 Financial Report of the United States Government

The Fiscal Year 2017 *Financial Report* of the U.S. Government (*Financial Report*) presents the U.S. Government's current financial position and condition, and discusses key financial topics and trends. The *Financial Report* is produced by the U.S. Department of the Treasury (Treasury) in coordination with the Office of Management and Budget (OMB) of the Executive Office of the President. The table on the preceding page presents several key indicators of the Government's financial position and condition, which are discussed in this Summary and, in greater detail, in the *Financial Report*. The Secretary of the Treasury, Director of OMB, and the Comptroller General of the United States at the Government Accountability Office believe that the information discussed in this *Financial Report* is important to all Americans.

This *Financial Report* addresses the Government's financial activity and results as of September 30, 2017. Note 25, Subsequent Events discusses events that occurred after the end of the fiscal year which may affect the Government's financial position and condition.

Where We Are Now

Comparing the Budget and the Financial Report

The *Budget of the United States Government (Budget)* and the *Financial Report of the U.S. Government* present complementary perspectives on the Government's financial position and condition.

- The *Budget* is the Government's primary financial planning and control tool. It accounts for past Government receipts and spending, and includes the President's proposed receipts and spending plan. *Receipts* are cash received by the U.S. Government (*Government*) and spending is measured as *outlays*, or payments made by the Government to the public. Receipts greater than outlays creates a budget *surplus*; and outlays greater than receipts creates a budget *deficit*.
- The *Financial Report* includes the Government's costs and revenues, assets and liabilities, and other important financial information. It compares the Government's *revenues* (amounts earned, but not necessarily collected), with *costs* (amounts incurred, but not necessarily paid) to derive net operating cost.

Chart 1 compares the Government's budget deficit (receipts vs. outlays) and net operating cost (revenues vs. costs) for Fiscal Years (FY) 2013 - 2017. During FY 2017:

- A \$126.5 billion increase in outlays was offset in part by a \$48.2 billion increase in receipts to increase the budget deficit by \$78.3 billion (about 13.3 percent) to \$665.7 billion.
- Net operating cost increased by \$105.0 billion or 10.0 percent to \$1.2 trillion, due largely to a \$128.8 billion (2.9 percent) increase in net cost, offset by a slight \$29.3 billion (0.9 percent) increase in tax and other revenues.
- The \$491.0 billion difference between the budget deficit and net operating cost is primarily due to accrued costs (incurred but not necessarily paid) related to increases in estimated federal employee and veteran benefits liabilities and certain other liabilities that are included in net operating cost, but not the budget deficit.

The \$491.0 billion difference between the budget deficit and net operating cost is primarily due to accrued costs (incurred but not necessarily paid) related to increases in estimated federal employee and veteran benefits liabilities and certain other liabilities that are included in net operating cost, but not the budget deficit.

Costs and Revenues

The Government's "bottom line" net operating cost increased \$105.0 billion (10.0 percent) during FY 2017 to \$1.2 trillion. It is calculated as follows:

- Starting with total gross costs of \$4.6 trillion, the government subtracts earned program revenues (e.g., Medicare premiums, national park entry fees, and postal service fees) and adjusts the balance for gains or losses from changes in actuarial assumptions used to estimate future federal employee and veterans benefits payments to derive its net cost before taxes and other revenues of \$4.5 trillion (see Chart 2), an increase of \$128.8 billion (2.9 percent) from FY 2016. This net increase is the combined effect of many offsetting increases and decreases across the Government. For example:
 - Agencies administering federal employee and veterans benefits programs, including the Office of Personnel Management (OPM), Department of Veterans Affairs (VA), and Department of Defense (DOD) employ a complex series of assumptions, including but not limited to interest rates, beneficiary eligibility, life expectancy, and medical cost levels, to make actuarial projections of their long-term benefits liabilities. Changes in these assumptions can result in either losses (net cost increases) or gains (net cost decreases). Across the Government, these net actuarial losses amounted to \$356.5 billion in FY 2017, an increase of \$83.2 billion over FY 2016.
 - Agencies that extend credit to the public, including student and housing loans, estimate and re-estimate long-term program cost employing multiple loan performance and economic assumptions. For example, these estimates and re-estimates contributed to a \$19.4 billion net cost decrease at the Department of Education and a \$39.7 billion net cost increase at the Department of Housing and Urban Development.
 - Department of Health and Human Services (HHS) and Social Security Administration (SSA) net costs increased \$11.8 billion and \$17.0 billion, respectively, largely due to increases in benefit expenses from the social insurance programs administered by those agencies (e.g., Medicare, Social Security). DOD net costs increased by \$56.2 billion due largely to the aforementioned changes in assumptions. Interest costs on the debt held by the public increased \$23.3 billion due largely to an increase in the debt.
 - Department of Energy (DOE) net costs decreased \$23.0 billion predominantly due to changes in estimated environmental remediation costs compared to FY 2016 and Department of Homeland Security (DHS) net costs increased \$10.9 billion primarily for hurricane response and recovery.
- The Government deducts tax and other revenues from net cost (with some adjustments) to derive its FY 2017 "bottom line" net operating cost of \$1.2 trillion.
 - From Chart 3, total Government tax and other revenues grew by \$29.3 billion (0.9 percent) to about \$3.4 trillion for FY 2017.
 - Together, individual income tax and tax withholdings, and corporation taxes accounted for about 88.5 percent of total tax and other revenues in FY 2017. Other revenues include Federal Reserve earnings, excise taxes, and customs duties.

Assets and Liabilities

Chart 4 summarizes the assets and liabilities that the Government reports on its balance sheet. As of September 30, 2017:

- Total assets (\$3.5 trillion) consist mostly of \$1.3 trillion in net loans receivable (primarily student loans) and \$1.0 trillion in net property, plant, and equipment).
 - Other significant Government resources not reported on the balance sheet include stewardship assets, natural resources, and the Government's power to tax and set monetary policy.
- Total liabilities (\$23.9 trillion) consist mostly of: (1) \$14.7 trillion in federal debt securities held by the public and accrued interest and (2) \$7.7 trillion in federal employee and veteran benefits payable.

- The “public” consists of individuals, corporations, state and local governments, Federal Reserve Banks, foreign governments, and other entities outside the federal government.
- The Government also reports about \$5.6 trillion of intragovernmental debt outstanding, which arises when one part of the Government borrows from another.
 - For example, Government funds (e.g., Social Security and Medicare trust funds) typically must invest excess annual receipts, including interest earnings, in Treasury-issued federal debt securities. Although not reflected in Chart 4, these securities are included in the calculation of federal debt subject to the debt limit.
- Debt held by the public plus intragovernmental debt equals gross federal debt, which, with some adjustments, is subject to a statutory debt ceiling (“debt limit”).
 - At the end of FY 2017, debt subject to the statutory limit (DSL) was \$20.2 trillion. Increasing or suspending the debt limit does not increase spending or authorize new spending; rather, it permits the Government to continue to honor pre-existing commitments.
 - Legislation most recently suspended the debt limit from November 2, 2015 through March 15, 2017, and from September 8, 2017 through December 8, 2017. See Note 25, Subsequent Events, of the *Financial Report* for developments since the end of the fiscal year.

Considering key macroeconomic indicators can help place the discussion of the Government's financial results in a broader context. During FY 2017, the economy continued to grow, job growth decelerated, and the unemployment rate declined. These and other economic and financial developments are discussed in greater detail in the *Financial Report*.

Where We Are Headed

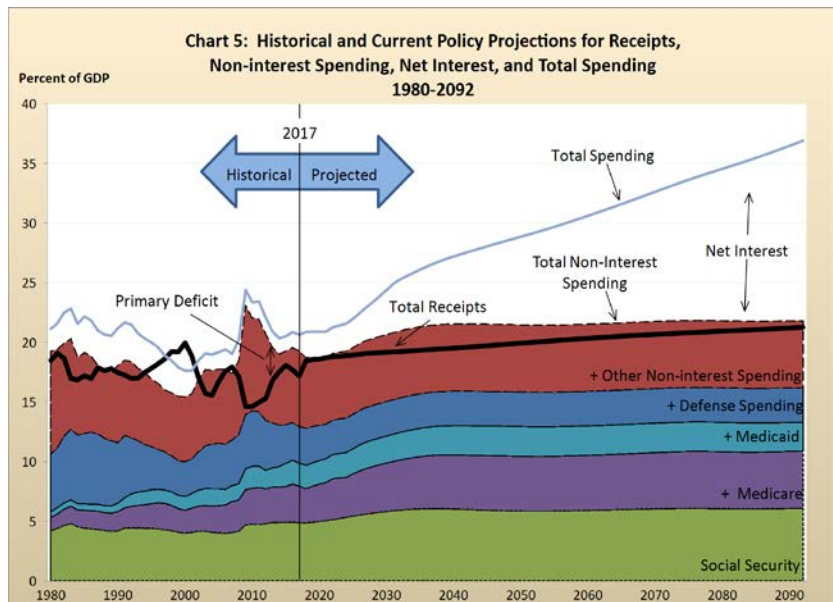

An important purpose of this *Financial Report* is to help citizens understand current fiscal policy and the importance and magnitude of policy reforms necessary to make it sustainable. A sustainable fiscal policy is one where the ratio of debt held by the public to Gross Domestic Product (GDP) (the debt-to-GDP ratio) is stable or declining over the long term. GDP measures the size of the Nation's economy in terms of the total value of all final goods and services that are produced in a year. Considering financial results relative to GDP is a useful indicator of the economy's capacity to sustain the Government's many programs.

To determine if current fiscal policy is sustainable, the projections discussed in the *Financial Report* assume current policy will continue indefinitely.¹ The projections are therefore neither forecasts nor predictions. As policy changes are enacted, actual financial outcomes will be different than those projected.

Receipts, Spending, and the Debt

Chart 5 shows historical and current policy projections for receipts, non-interest spending by major category, net interest, and total spending expressed as a percent of GDP. The projections do not reflect the *Tax Cuts and Jobs Act* (P.L. 115-97) enacted on December 22, 2017; for more information on the Act, see Note 25, Subsequent Events.

- The primary deficit is the difference between non-interest spending and receipts. The primary deficit expressed as a ratio relative to GDP (the primary deficit-to-GDP ratio) is useful for gauging long-term fiscal sustainability.
- The primary deficit-to-GDP ratio spiked during 2009 through 2012 due to the financial crisis and the ensuing severe recession, as well as increased spending and temporary tax reductions enacted to stimulate the economy and support recovery. As an economic recovery took hold, the primary deficit-to-GDP ratio fell, averaging 1.9 percent from 2013-2017. The ratio is projected to shrink further through 2021 as discretionary spending limits remain in effect and economic recovery boosts tax receipts.
- After 2021, increased spending for Social Security and health programs² due to the continued retirement of the baby boom generation and increases in health care costs is projected to result in increasing primary deficits through 2038 when the primary deficit-to-GDP ratio reaches 2.1 percent. After 2038, the ratio slowly declines as the aging of the population slows, and reaches 0.6 percent in 2091.

¹ Current policy in the projections is based on current law, but includes extension of certain policies that expire under current law but are routinely extended or otherwise expected to continue.

² See [the 2017 Trustees Report for Medicare \(pp 4-5\)](#) and [Social Security \(pp 4-23\)](#).

- The persistent long-term gap between projected receipts and total spending shown in Chart 5 occurs despite the projected effects of the *Affordable Care Act (ACA)*³ on long-term deficits.
 - Enactment of the ACA in 2010 and the Medicare Access and CHIP Reauthorization Act (MACRA) in 2015 established cost controls for Medicare hospital and physician payments whose long-term effectiveness is still to be demonstrated.
 - There is uncertainty about the extent to which these projections can be achieved and whether the ACA’s provisions that reduce Medicare cost growth will be overridden by new legislation.

Table 1 summarizes the status and projected trends of the Government’s Social Security and Medicare Trust Funds.

Table 1: Trust Fund Status		
Fund	Projected Depletion	Projected Post-Depletion Trend
Medicare Hospital Insurance (HI)*	2029 (2028 in FY 2016 Report)	In 2029, trust fund income is projected to cover 88 percent of benefits, decreasing to 81 percent in 2041, then increasing to 88 percent by 2091.
Combined Old-Age Survivors and Disability Insurance (OASDI)**	2034 (unchanged from FY 2016 Report)	In 2034, trust fund income is projected to cover 77 percent of scheduled benefits, decreasing to about 73 percent by 2091.

* Source: 2017 Medicare Trustees Report ** Source: 2017 OASDI Trustees Report
Projections assume full Social Security and Medicare benefits are paid after fund depletion contrary to current law.

The primary deficit projections in Chart 5, along with those for interest rates and GDP, determine the debt-to-GDP ratio projections in Chart 6.

- The debt-to-GDP ratio was 76 percent at the end of FY 2017, and under current policy is projected to be 74 percent in 2027, 136 percent in 2047, and 297 percent in 2092.
- The debt-to-GDP ratio rises continuously despite flat primary deficits mainly because higher levels of debt lead to higher net interest expenditures, which lead to higher deficits and debt. The continuous rise of the debt-to-GDP ratio after 2026 indicates that current fiscal policy is unsustainable.
- These debt-to-GDP projections are generally higher than the corresponding projections in both the FY 2016 and FY 2015 *Financial Reports*.

³The ACA refers to P.L. 111-148, as amended by P.L. 111-152. The ACA expands health insurance coverage, provides health insurance subsidies for low-income individuals and families, includes many measures designed to reduce health care cost growth, and significantly reduces Medicare payment rates relative to the rates that would have occurred in the absence of the ACA. (See Note 22 and the Required Supplementary Information section of the *Financial Report*, and the 2017 Medicare Trustees Report for more information).

The Fiscal Gap and the Cost of Delaying Fiscal Policy Reform

- The 75-year fiscal gap is a measure of how much primary deficits must be reduced over the next 75 years in order to make fiscal policy sustainable. That estimated fiscal gap for 2017 is 2.0 percent of GDP (compared to 1.6 percent for 2016).
- This estimate implies that making fiscal policy sustainable over the next 75 years would require some combination of spending reductions and receipt increases that equals 2.0 percent of GDP on average over the next 75 years. The fiscal gap represents 10.0 percent of 75-year present value receipts and 9.4 percent of 75-year present value non-interest spending.
- The timing of policy changes to make fiscal policy sustainable has important implications for the well-being of future generations as is shown in Table 2.

Table 2	
Costs of Delaying Fiscal Reform	
Period of Delay	Change in Average Primary Surplus
Reform in 2018 (No Delay)	2.0 percent of GDP between 2018 and 2092
Reform in 2028 (Ten-Year Delay)	2.4 percent of GDP between 2028 and 2092
Reform in 2038 (Twenty-Year Delay) ..	3.0 percent of GDP between 2038 and 2092

- Table 2 shows that, if action is delayed by 10 years, the estimated magnitude of primary surplus increases necessary to close the 75-year fiscal gap increases by about 20 percent from 2.0 percent of GDP on average over 75 years to 2.4 percent on average over 65 years; if action is delayed by 20 years, the magnitude of reforms necessary increases by about 50 percent.
- Future generations are harmed by a policy delay because the higher the primary surpluses are during their lifetimes, the greater is the difference between the taxes they pay and the programmatic spending from which they benefit.

Conclusion

- Projections in the *Financial Report* indicate that the Government's debt-to-GDP ratio is projected to remain relatively stable over the next decade, and then continuously rise over the remaining projection period and beyond if current policy is kept in place. This trend implies that current policy is not sustainable.
- As long as changes in policy are not so abrupt as to slow economic growth, the sooner policy changes are adopted, the smaller the changes to revenue and/or spending will need to be to return the Government to a sustainable fiscal path.

The *2017 Financial Report of the United States Government* and other information about the nation's finances are available at:

- U.S. Department of the Treasury, <http://www.fiscal.treasury.gov/reports-statements/financial-report/>;
- OMB's Office of Federal Financial Management, <https://www.whitehouse.gov/omb/management/office-federal-financial-management/>; and
- GAO, <http://www.gao.gov/financial.html>

The Government Accountability Office's (GAO) audit report on the U.S. Government's consolidated financial statements can be found beginning on page 218 of the full *Financial Report*. GAO was unable to express an opinion (disclaimed) on these consolidated financial statements for the reasons discussed in the audit report.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Introduction

The Fiscal Year (FY) 2017 *Financial Report of the United States Government (Financial Report)* provides the President, Congress, and the American people with a comprehensive view of the federal government's financial position and condition, and discusses important financial issues and significant conditions that may affect future operations, including the need to achieve fiscal sustainability over the medium and long term.

Pursuant to 31 U.S.C. § 331(e)(1), the Department of the Treasury (Treasury), in cooperation with the Office of Management and Budget (OMB), must submit an audited (by the Government Accountability Office or GAO) financial statement for the preceding fiscal year, covering all accounts and associated activities of the executive branch of the United States Government¹ to the President and Congress no later than six months after the September 30 fiscal year-end.

The *Financial Report* is prepared from the audited financial statements of specifically designated federal agencies, (see organizational chart on the next page and Appendix A). As it has for the past twenty years, GAO issued a disclaimer of opinion on the accrual-based, consolidated financial statements for the fiscal years ended September 30, 2017 and 2016. GAO also issued a disclaimer of opinion on the sustainability financial statements, which consist of the 2017 and 2016 Statements of Long-Term Fiscal Projections (SLTFP); the 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance (SOSI); and the 2017 and 2016 Statements of Changes in Social Insurance Amounts (SCSIA). A disclaimer of opinion indicates that sufficient information was not available for the auditors to determine whether the reported financial statements were fairly presented in accordance with Generally Accepted Accounting Principles (GAAP). In FY 2017, 33² of the 39 most significant agencies earned unmodified opinions on their financial statement audits.

The FY 2017 *Financial Report* consists of:

- Management's Discussion and Analysis (MD&A), which provides management's perspectives on and analysis of information presented in the *Financial Report*, such as financial and performance trends;
- Principal financial statements and the related notes to the financial statements;
- Required Supplementary Information (RSI), Required Supplementary Stewardship Information (RSSI), and Other Information; and
- GAO's audit report.

This *Financial Report* addresses the Government's financial activity and results as of September 30, 2017. Note 25, *Subsequent Events* discusses events that occurred after the end of the fiscal year which may affect the Government's financial position and condition.

In addition, the Executive Summary to this *Financial Report* provides a quick reference to the key issues in the *Financial Report* and an overview of the Government's financial position and condition.

Mission & Organization

The Government's fundamental mission is derived from the Constitution: ***"...to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings of liberty to ourselves and our posterity."*** The Government's functions have evolved over time to include health care, income security, veterans benefits and services, housing and transportation, security, and education. Exhibit 1 provides an overview of how the U.S. Government (Government) is organized.

¹ The *Government Management Reform Act* of 1994 has required such reporting, covering the executive branch of the Government, beginning with financial statements prepared for FY 1997. Treasury and OMB included the legislative and judicial branches in the consolidated financial statements as well.

² The 33 agencies include: (1) the Department of Health and Human Services, which received disclaimers of opinion on its 2017, 2016, 2015, 2014, and 2013 SOSI and on its 2017 and 2016 SCSIA; (2) the Department of Labor, which received disclaimers of opinion on its 2017 SCSIA and 2016 SOSI and SCSIA; and (3) the Department of Agriculture (USDA), which received an unmodified opinion only on its balance sheet (other statements were not audited). The Department of Energy (DOE) expects to issue its audited Agency Financial Report (AFR) after the release of this *Financial Report*.

Exhibit 1

The Government's Financial Position and Condition

This *Financial Report* discusses the Government's financial position at the end of the fiscal year, explains how and why the financial position changed during the year, and discusses the Government's financial condition and how it may change in the future.

	2017	2016*	Increase / (Decrease)	
			\$	%
FINANCIAL MEASURES (Dollars in Billions)

*Restated (See Financial Statement Note 1.V)

Table 1 on the previous page and the following summarize the federal government's financial position:

- The Government's gross costs of \$4.6 trillion, less \$431.9 billion in revenues earned for goods and services provided to the public (e.g., Medicare premiums, national park entry fees, and postal service fees), plus \$356.5 billion in net losses from changes in assumptions (e.g., interest rates, inflation, disability claims rates) yields the Government's net cost of \$4.5 trillion, an increase of \$128.8 billion or 2.9 percent over FY 2016.
- Deducting \$3.4 trillion in tax and other revenues, with some adjustment for unmatched transactions and balances, results in a "bottom line" net operating cost of \$1.2 trillion for FY 2017, (an increase of \$105.0 billion or 10.0 percent) over FY 2016.
- Comparing total 2017 Government assets of \$3.5 trillion to total liabilities of \$23.9 trillion (comprised mostly of \$14.7 trillion in federal debt held by the public and accrued interest payable³, and \$7.7 trillion of federal employee and veterans benefits payable) yields a negative net position of \$20.4 trillion.
- The budget deficit is primarily financed through borrowing from the public. As of September 30, 2017, debt held by the public, excluding accrued interest, was \$14.7 trillion. This amount, plus intragovernmental debt (\$5.6 trillion) equals gross federal debt, which, with some adjustments, is subject to the statutory debt limit. As of September 30, 2017, the Government's total debt subject to the debt limit was \$20.2 trillion. The statutory debt limit was most recently suspended through December 8, 2017. See Note 25, Subsequent Events, for developments since the end of the fiscal year.

This *Financial Report* also contains information about projected impacts on the Government's future financial condition. Under federal accounting rules, social insurance amounts as reported in both the SLTFP and in the SOSI are not considered liabilities of the Government. From Table 1:

- The SLTFP shows that the present value (PV)⁴ of total non-interest spending, including Social Security, Medicare, Medicaid, defense, and education, etc.), over the next 75 years, under current policy, is projected to exceed the PV of total receipts by \$16.2 trillion (total federal non-interest net expenditures from Table 1).
- The SOSI shows that the PV of the Government's expenditures for Social Security and Medicare Parts A, B and D, and other social insurance programs over 75 years is projected to exceed social insurance revenues⁵ by about \$49.0 trillion, a \$2.3 trillion increase over 2016 social insurance projections.
- The two sustainability measures in Table 1 differ primarily because total non-interest net expenditures from the SLTFP include the effects of general revenues and non-social insurance spending, neither of which is included in the SOSI.

The Government's current financial position and long-term financial condition can be evaluated both in dollar terms and in relation to the economy as a whole. Gross Domestic Product (GDP) is a measure of the size of the nation's economy in terms of the total value of all final goods and services that are produced in a year. Considering financial results relative to GDP is a useful indicator of the economy's capacity to sustain the Government's many programs. For example:

- The budget deficit (i.e., including the consolidated receipts and outlays from federal funds and the Social Security Trust Fund) increased from \$587.4 billion in FY 2016 to \$665.7 billion in FY 2017. The deficit-to-GDP ratio in 2017 was 3.5 percent, compared to 3.2 percent in FY 2016 and the 3.1 percent average over the past 40 years.⁶
- The budget deficit is primarily financed through borrowing from the public. As of September 30, 2017, the \$14.7 trillion in debt held by the public, excluding accrued interest, equates to approximately 76 percent of GDP.
- The 2017 SOSI projection of \$49.0 trillion net PV excess of expenditures over receipts over 75 years represents about 4.0 percent of the PV of GDP over 75 years. The excess of total projected non-interest spending over receipts of \$16.2 trillion from the SLTFP represents 1.2 percent of GDP over 75 years. As discussed in this *Financial Report*, these projections can, in turn, have a significant impact on projected debt as a percent of GDP.
- To prevent the debt-to-GDP ratio from rising over the next 75 years, a combination of non-interest spending reductions and receipts increases that amounts to 2.0 percent of GDP on average is needed (1.6 percent of GDP on average in the 2016 projections). The fiscal gap represents 10.0 percent of 75-year present value receipts and 9.4 percent of 75-year present value non-interest spending.

³ On the Government's balance sheet, debt held by the public and accrued interest payable consists of Treasury securities, net of unamortized discounts and premiums, and accrued interest payable. The "public" consists of individuals, corporations, state and local governments, Federal Reserve Banks, foreign governments, and other entities outside the federal government.

⁴ Present values recognize that a dollar paid or collected in the future is worth less than a dollar today because a dollar today could be invested and earn interest. To calculate a present value, future amounts are thus reduced using an assumed interest rate, and those reduced amounts are summed.

⁵ Social Security is funded by the payroll taxes and revenue from taxation of benefits. Medicare Part A is funded by the payroll taxes, revenue from taxation of benefits, and premiums that support those programs. Medicare Parts B and D are primarily financed by general revenues and premiums. By accounting convention, general revenues transferred to Medicare Parts B and D are eliminated in consolidation at the governmentwide level and, as such, are not included in the SOSI.

Fiscal Year 2017 Financial Statement Audit Results

For FY 2017, GAO issued a disclaimer of audit opinion on the accrual-based, governmentwide financial statements, as it has for the past twenty years, due to certain material weaknesses in internal control over financial reporting and other limitations on the scope of its work. In addition, GAO issued a disclaimer of opinion on the sustainability financial statements due to significant uncertainties primarily related to the achievement of projected reductions in Medicare cost growth and certain other limitations. GAO's audit report on page 218 of this *Financial Report*, discusses GAO's findings.

21 of the 24 agencies required to issue audited financial statements under the *Chief Financial Officers (CFO) Act* received unmodified audit opinions, as did 12 of 15 additional significant reporting agencies (see Table 10 and Appendix A).⁷

The Governmentwide Reporting Entity

This *Financial Report* includes the financial status and activities of the executive, legislative, and judicial branches of the federal government, even though the legislative and judicial branches are not required by law to submit financial statement information to Treasury. Appendix A includes a list of the agencies and entities contributing to this *Financial Report*.⁸

A number of entities are not consolidated due to the nature of their operations, including the Federal Reserve System (considered to be an independent central bank under the general oversight of Congress), all fiduciary funds, and Government-Sponsored Enterprises (GSEs), including the Federal Home Loan Banks, the Federal National Mortgage Association (Fannie Mae), and the Federal Home Loan Mortgage Corporation (Freddie Mac). Following U.S. GAAP for federal entities, the Government has not consolidated into its financial statements the assets, liabilities, or results of operations of any financial organization or commercial entity in which Treasury holds either a direct, indirect, or beneficial majority equity investment. Under Statement of Federal Financial Accounting Concepts (SFFAC) No. 2, these entities meet the criteria of paragraph 50 and do not appear in the Federal Budget section "Federal Programs by Agency and Account." As such, these entities are not consolidated into the financial reports of the Government. However, the values of the investments in and any related liabilities to such entities are presented on the balance sheet.

The following pages contain a more detailed discussion of the Government's financial results for FY 2017, the budget, the economy, the debt, and a long-term perspective about fiscal sustainability, including the Government's ability to meet its social insurance benefits obligations. The information in this *Financial Report*, when combined with the Budget of the U.S. Government, collectively presents information on the Government's financial position and condition.

Accounting Differences Between The Budget and the Financial Report

Each year, the Administration issues two reports that detail the Government's financial results: the *Budget of the U.S. Government (Budget)*, and this *Financial Report*. The exhibit on the following page provides the key characteristics and differences between the two documents.

Treasury generally prepares the financial statements in this *Financial Report* on an accrual basis of accounting as prescribed by U.S. GAAP for federal entities.⁹ These principles are tailored to the Government's unique characteristics and circumstances. For example, agencies prepare a uniquely structured "Statement of Net Cost," which is intended to present net Government resources used in its operations. Also, unique to Government is the preparation of separate statements to reconcile differences and articulate the relationship between the budget and financial accounting results.

⁷The 21 agencies include: (1) the Department of Health and Human Services, which received disclaimers of opinions on its 2017, 2016, 2015, 2014, and 2013, SOSI and its 2017 and 2016 SCSIA; and (2) the Department of Labor, which received a disclaimer of opinion on its 2017 SCSIA and 2016 SOSI and SCSIA. This also includes the Department of the Agriculture which received an unmodified audit opinion on its Balance Sheet as of September 30, 2017, but its other financial statements were not audited. The Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), and the Farm Credit System Insurance Corporation (FCSIC) are among the 39 significant entities. These entities operate on a calendar year basis (December 31 year-end). Statistic reflects 2016 audit results for these organizations. In addition, neither the Defense Security Cooperation Agency (DSCA) nor the General Fund of the U.S. Government was subject to audit for FY 2017.

⁸Since programs are not administered at the governmentwide level, performance goals and measures for the federal government, as a whole, are not reported here. The outcomes and results of those programs are addressed at the individual agency level and can be found in each agency's financial report. Go to www.performance.gov for more information about Government performance.

⁹Under U.S. GAAP, most U.S. Government revenues are recognized on a 'modified cash' basis, or when they become measurable. The Statement of Social Insurance presents the present value of the estimated future revenues and expenditures for scheduled benefits over the next 75 years for the Social Security, Medicare, Railroad Retirement programs; and 25 years for the Black Lung program. The Statement of Long-Term Fiscal Projections presents the present value of the projected future receipts and non-interest spending for the federal government.

Budget of the U.S. Government	Financial Report of the U.S. Government
<p><u>Prepared primarily on a "cash basis"</u></p> <ul style="list-style-type: none"> Initiative-based and prospective: focus on current and future initiatives planned and how resources will be used to fund them. Receipts ("cash in"), taxes and other collections recorded when received. Outlays ("cash out"), largely recorded when payment is made. 	<p><u>Prepared on an "accrual and modified cash basis"</u></p> <ul style="list-style-type: none"> Agency-based and retrospective – prior and present resources used to implement initiatives. Revenue: Tax revenue (more than 90 percent of total revenue) recognized on modified cash basis (see Financial Statement Note 1.B). Remainder recognized when earned, but not necessarily received. Costs: recognized when incurred, but not necessarily paid.

Budget Deficit vs. Net Operating Cost

The budget deficit is measured as the excess of outlays, or payments made by the Government, over receipts, or cash received by the Government. Net operating cost, on an accrual basis, is the excess of costs (what the Government has incurred, but has not necessarily paid) over revenues (what the Government has collected and expects to collect, but has not necessarily received). As shown in Chart A, net operating cost typically exceeds the budget deficit due largely to the inclusion of cost accruals associated with increases in estimated liabilities for the Government's postemployment benefit programs for its military and civilian employees and veterans as well as environmental liabilities.

The Government's primarily cash-based¹⁰ budget deficit increased by \$78.3 billion (about 13.3 percent) from approximately \$587.4 billion in FY 2016 to about \$665.7 billion in FY 2017 due to lower growth in receipts compared to the increase in outlays in FY 2017. The \$48.2 billion (1.5 percent) increase in receipts can be attributed to higher social insurance and retirement receipts and net individual income taxes, partially offset by lower deposits of earnings by the Federal Reserve. Outlays increased \$126.5 billion (3.3 percent). Contributing to the increase over FY 2016 were higher outlays for Social Security, Medicare and Medicaid, and interest on the debt held by the public. In addition, revisions in estimates of credit subsidy for outstanding Federal loans and loan guarantees, primarily in the Departments of Education and Housing and Urban Development, as well as lower spectrum auction receipts and higher spending by the Federal Emergency Management

¹⁰ Interest outlays on Treasury debt held by the public are recorded in the budget when interest accrues, not when the interest payment is made. For federal credit programs, outlays are recorded when loans are disbursed, in an amount representing the present value cost to the Government, (commonly referred to as credit subsidy cost. Credit subsidy cost excludes administrative costs.

Agency for hurricane relief and recovery contributed to the increase.¹¹ The Government's largely accrual-based net operating cost also increased, by \$105.0 billion (10.0 percent) from \$1.1 trillion to \$1.2 trillion, over FY 2016. As explained below, net operating costs are affected by both changes in revenues and costs.

The *Reconciliation of Net Operating Cost and Budget Deficit Statement* is summarized in Table 2. Table 2 details the relationship between the Government's accrual-based net operating cost relates to the cash-based budget deficit. From Table 2, the \$491.0 billion net difference between the Government's budget deficit and net operating cost for FY 2017, is mostly attributable to: (1) a \$490.7 billion net increase in liabilities for Federal employee and veteran benefits payable (FEVBP); and (2) several offsetting items, including, but not limited to a net \$55.0 billion increase in Property, Plant, and Equipment (PP&E) and a \$17.9 billion increase in environmental and disposal liabilities. These and most of the other "Change in" amounts summarized in Table 2 affect net operating cost, but not the budget deficit. In particular, the \$490.7 billion FEVBP change not only represents most (99.9 percent) of the difference between the budget deficit and net operating cost, but is also, as discussed in the following section, the most significant driver of the increase in the government's net operating cost for 2017.

Table 2: Net Operating Cost vs. Budget Deficit		
Dollars in Billions	2017	2016*
Net Operating Cost	\$ (1,156.7)	\$ (1,051.7)

The Government's Net Position: "Where We Are"

The Government's financial position and condition have traditionally been expressed through the *Budget*, focusing on surpluses, deficits, and debt. However, this primarily cash-based discussion of the Government's net outlays (deficit) or net receipts (surplus) tells only part of the story. The Government's accrual-based net position, (the difference between its assets and liabilities), and its "bottom line" net operating cost (the difference between its revenues and costs) are also key financial indicators.

Costs and Revenues

The Government's *Statement of Operations and Changes in Net Position*, much like a corporation's income statement, shows the Government's "bottom line" and its impact on net position (i.e., assets net of liabilities). To derive the Government's "bottom line" net operating cost, the *Statement of Net Cost* first shows how much it costs to operate the federal government, recognizing expenses when incurred, regardless of when payment is made (accrual basis). It shows the derivation of the Government's *net cost* or the net of: (1) gross costs, or the costs of goods produced and services rendered by the Government, (2) the earned revenues generated by those goods and services during the fiscal year, and (3) gains or losses from changes in actuarial assumptions used to estimate certain liabilities. This amount, in turn, is offset against the Government's taxes and other revenue reported in the *Statement of Operations and Changes in Net Position* to calculate the "bottom line" or *net operating cost*.¹²

Dollars in Billions	2017		2016*		Increase / (Decrease)		
	\$		\$		\$	%	
Gross Cost	\$	(4,609.3)	\$	(4,515.7)	\$	93.6	2.1%
Less: Earned Revenue	\$	431.9	\$	383.9	\$	48.0	12.5%
Gain/(Loss) from Changes in Assumptions	\$	(356.5)	\$	(273.3)	\$	83.2	30.4%
Net Cost	\$	(4,533.9)	\$	(4,405.1)	\$	128.8	2.9%
Less: Tax and Other Revenues	\$	3,374.6	\$	3,345.3	\$	29.3	0.9%
Unmatched Transactions and Balances	\$	2.6	\$	8.1	\$	(5.5)	(67.9%)
Net Operating Cost	\$	(1,156.7)	\$	(1,051.7)	\$	105.0	10.0%

*Restated (See Financial Statement Note 1.V)

Table 3 shows that the Government's "bottom line" net operating cost increased by \$105.0 billion (10.0 percent), from \$1.1 trillion in FY 2016 to \$1.2 trillion in FY 2017.¹³ This increase is largely attributable to a \$128.8 billion (2.9 percent) increase in agency net costs, which was offset slightly by a \$29.3 billion (0.9 percent) increase in tax and other revenues over the past fiscal year as summarized in the following.

Gross Cost and Net Cost

The *Statement of Net Cost*, starts with the Government's total gross costs of \$4.6 trillion, subtracts revenues earned for goods and services provided (e.g., Medicare premiums, national park entry fees, and postal service fees), and adjusts the balance for gains or losses from changes in actuarial assumptions used to estimate certain liabilities, including federal employee and veterans benefits to derive its net cost of \$4.5 trillion (See Chart B), a \$128.8 billion (2.9 percent) increase over FY 2016.

Typically, the annual change in the Government's net cost is impacted by a variety of offsetting increases and decreases across agencies. For example, offsetting changes in net cost during FY 2017 included:

- Agencies administering federal employee and veterans benefits programs employ a complex series of assumptions, including but not limited to interest rates, beneficiary eligibility, life expectancy, and medical cost levels, to make actuarial projections of their long-term benefits liabilities. Changes in these assumptions can result in either losses (net cost increases) or gains (net cost decreases). Across the Government, net actuarial losses from these assumption changes amounted to \$356.5 billion in FY 2017, an increase of \$83.2 billion over FY 2016. The primary agencies that administer programs impacted by these assumptions – typically federal employee pension and benefit programs

¹² As shown in Table 3, net operating cost includes an adjustment for unmatched transactions and balances, which represent unreconciled differences in intragovernmental activity and balances between Federal agencies. These amounts are described in greater detail in the Other Information section of this *Financial Report*.

¹³ The Statement of Net Cost in this *Financial Report* reflects FY 2016 net cost restatements for the Pension Benefit Guaranty Corporation from \$4.7 billion to \$5.4 billion, (See Financial Statement Note 1.V).

– are the Office of Personnel Management (OPM), the Department of Veterans Affairs (VA), and the Department of Defense (DOD). These agencies recorded losses from changes in actuarial assumptions in the amounts of \$102.5 billion, \$229.7 billion, and \$24.1 billion, respectively.

- These analyses and the resulting gains or losses can sometimes cause significant swings in total agency costs from year to year. For example, for FY 2017, changes in net cost at VA (\$169.4 billion decrease), OPM (\$178.5 billion increase), and DOD (\$56.2 billion increase), were impacted by the corresponding changes in gains or losses from assumption changes at these agencies.
- Agencies that extend credit to the public in the form of loans, including student and housing loans, estimate and annually re-estimate the long-term costs of these programs employing multiple loan performance and economic assumptions. These estimates and reestimates can have varying effects on an agency’s net cost each year. For example, the \$19.4 billion net cost decrease at the Department of Education and the \$39.7 billion increase at the Department of Housing and Urban Development were both largely attributed to these “credit subsidy estimates and re-estimates.”¹⁴;
- \$11.8 billion and \$17.0 billion net cost increases at the Department of Health and Human Services (HHS) and the Social Security Administration (SSA), respectively, primarily due to cost increases of the benefits programs that these agencies administer (HHS – Medicare and Medicaid programs, SSA – Old Age Survivors and Disability Insurance (OASDI) programs);
- A \$23.3 billion cost increase in interest on debt held by the public due largely to an increase in the debt¹⁵;
- \$23.0 billion net cost decrease at the Department of Energy predominantly due to changes in estimated environmental remediation costs compared to FY 2016; and
- A \$10.9 billion net cost increase at the Department of Homeland Security primarily to support response and recovery efforts related to the recent hurricanes.¹⁶

Chart B shows the composition of the Government’s net cost. In FY 2017, nearly three fourths of total net cost came from HHS, SSA, DOD, and VA. Chart C shows that these agencies have consistently incurred the largest agency shares of the Government’s total net cost in recent years. As indicated above, HHS and SSA net costs for FY 2017 (\$1.1 trillion and \$1.0 trillion, respectively) are attributable to major social insurance programs administered by these agencies. DOD net costs of \$665.4 billion relate primarily to operations, readiness, and support; personnel; research; procurement; and retirement and health benefits. VA costs (\$479.7 billion during FY 2017, nearly half of which was due to losses from changes in actuarial assumptions as referenced earlier) support health, education and other benefits programs for our Nation’s veterans. Chart B also shows that interest on debt held by the public contributed an additional 6 percent, and the other agencies included in the Government’s FY 2017 Statement of Net Cost accounted for a combined 22 percent of the Government’s total net cost for FY 2017.

¹⁴ FY 2017 Department of Education Agency Financial Report, pp. 17-18; FY 2017 Department of Housing and Urban Development Agency Financial Report, pp. 20-23.
¹⁵ FY 2017 Department of the Treasury Agency Financial Report, p. 28
¹⁶ FY 2017 U.S. Department of Homeland Security Agency Financial Report, p. 27

Tax and Other Revenues

As noted earlier, tax and other revenues from the *Statement of Operations and Changes in Net Position* are deducted from total net cost to derive the Government's "bottom line" net operating cost. Chart D shows that total tax and other revenue did not change significantly, increasing slightly by \$29.3 billion or 0.9 percent to \$3.4 trillion for FY 2017. This increase is attributable mainly to an overall growth in individual income tax collections, partially offset by reduced estate and corporation income tax collections and deposit of earnings from the Federal Reserve System.¹⁷ Earned revenues from Table 3 are not considered "taxes and other revenue" and, thus, are not shown in Chart D. Individual income tax and tax withholdings and corporation income taxes accounted for about 79.7 percent and 8.9 percent of total revenue, respectively in FY 2017; other revenues from Chart D include Federal Reserve earnings, excise taxes, unemployment taxes, and customs duties.

As previously shown in Table 3, the increase in net cost more than offset the slight increase in tax and other revenues, resulting in a slight increase in the government's net operating cost from \$ 1.1 trillion for FY 2016 to \$1.2 trillion for FY 2017.

Assets and Liabilities

The Government's net position at the end of the year is derived by netting the Government's assets against its liabilities, as presented in the *Balance Sheet* (summarized in Table 4). The balance sheet does not include the financial value of the Government's sovereign powers to tax, regulate commerce, or set monetary policy or value of nonoperational resources, such as national and natural resources, for which the Government is a steward. In addition, as is the case with the *Statement of Operations and Changes in Net Position*, the *Balance Sheet* includes a separate presentation of the portion of net position related to funds from dedicated collections. Moreover, the Government's exposures are broader than the liabilities presented on the balance sheet. The Government's future social insurance exposures (e.g., Medicare and Social Security) as well as other fiscal projections, commitments and contingencies, are reported in separate statements and disclosures. This information is discussed later in this Management Discussion and Analysis (MD&A) section, the financial statements, and RSI sections of this *Financial Report*.

¹⁷ FY 2017 [Department of the Treasury Agency Financial Report](#), p. 29

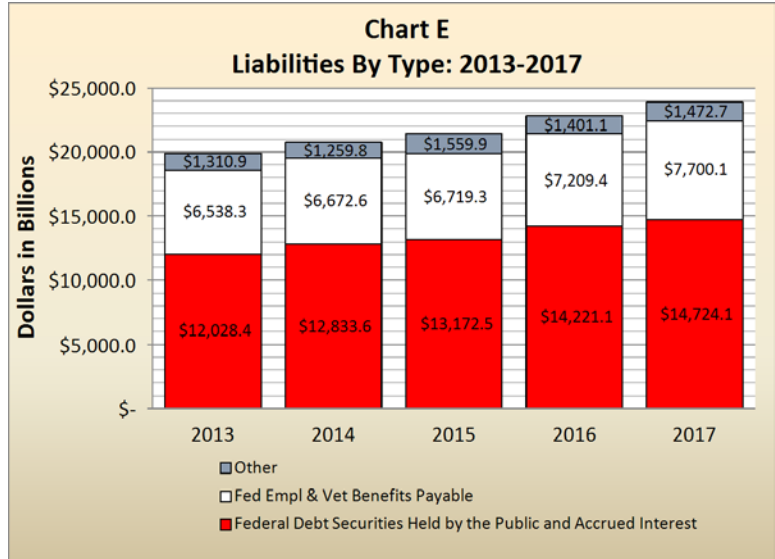

Assets

As of September 30, 2017, the Government’s \$3.5 trillion in assets are comprised mostly of net loans receivable (\$1.3 trillion) and net property, plant, and equipment (\$1.0 trillion).¹⁸ From Financial Statement Note 4, the Department of Education’s (Education’s) Federal Direct Student Loan Program accounted for \$1.0 trillion (77.2 percent) of total net loans receivable. Education’s direct student loan program receivables balances have grown by more than 170 percent since FY 2011 largely due to increased direct loan disbursements, attributable to the continued effect of 2010 legislation requiring a transition for new loans from guaranteed student loans to full direct lending by Education.¹⁹

Liabilities

As indicated in Table 4 and Chart E, of the Government’s \$23.9 trillion in total liabilities, the largest liability is federal debt securities held by the public and accrued interest, the balance of which increased by \$503.0 billion (3.5 percent) to \$14.7 trillion as of September 30, 2017.

The other major component of the Government’s liabilities is federal employee and veteran benefits payable (i.e., the Government’s pension and other benefit plans for its military and civilian employees), which increased \$490.7 billion (6.8 percent) during FY 2017, to \$7.7 trillion. This total amount is comprised of \$2.5 trillion in benefits payable for the current and retired civilian workforce, and \$5.2 trillion for the military and veterans. OPM administers the largest civilian pension plan, covering nearly 2.7 million current employees and 2.6 million annuitants and survivors. The military pension plan covers about 2.1 million current military personnel (including active service, reserve, and National Guard) and approximately 2.3 million retirees and survivors.

Federal Debt

The budget surplus or deficit is the difference between total federal spending and receipts (e.g., taxes) in a given year. The Government borrows from the public (increases federal debt levels) to finance deficits. During a budget surplus (i.e., when receipts exceed spending), the Government typically uses those excess funds to reduce the debt held by the public. *The Statement of Changes in Cash Balance from Budget and Other Activities* reports how the annual budget surplus or deficit relates to the federal government’s borrowing and changes in cash and other monetary assets. It also explains how a budget surplus or deficit normally affects changes in debt balances.

The Government’s publicly-held debt, or federal debt held by the public, and accrued interest (balance sheet liability) totaled \$14.7 trillion as of September 30, 2017. It is comprised of Treasury securities, such as bills, notes, and bonds, net of unamortized discounts and premiums; and accrued interest payable. The “public” consists of individuals, corporations, state and local governments, Federal Reserve Banks, foreign governments, and other entities outside the federal government. As indicated above, budget surpluses have typically resulted in borrowing reductions, and budget deficits have conversely yielded borrowing increases. However, the Government’s debt operations are generally much more complex. Each year, trillions of dollars of debt mature and new debt is issued to take its place. In FY 2017, new borrowings were \$8.7 trillion, and repayments of maturing debt held by the public were \$8.2 trillion, both increases from FY 2016).

¹⁸ For financial reporting purposes, other than multi-use heritage assets, stewardship assets are not recorded as part of Property, Plant, and Equipment. Stewardship assets are comprised of stewardship land and heritage assets. Stewardship land consists of public domain land (e.g., national parks, wildlife refuges). Heritage assets include national monuments and historical sites that among other characteristics are of historical, natural, cultural, educational, or artistic significance. See Note 24 – Stewardship Land and Heritage Assets.

¹⁹ With the enactment of the SAFRA Act, which was included as part of the *Health Care and Education Reconciliation Act of 2010* (HCERA) (Pub. L. 111-152), no new loans were originated under the Federal Family Education Loan (FFEL) Program (guaranteed loan program) since July 1, 2010. See [U.S. Department of Education FY 2017 Agency Financial Report](#) p. 52.

In addition to debt held by the public, the Government has about \$5.6 trillion in intragovernmental debt outstanding, which arises when one part of the Government borrows from another. It represents debt issued by the Treasury and held by Government accounts, including the Social Security (\$2.9 trillion) and Medicare (\$268.4 billion) trust funds. Intragovernmental debt is primarily held in Government trust funds in the form of special nonmarketable securities by various parts of the Government. Laws establishing Government trust funds generally require excess trust fund receipts (including interest earnings) over disbursements to be invested in these special securities. Because these amounts are both liabilities of the Treasury and assets of the Government trust funds, they are eliminated as part of the consolidation process for the governmentwide financial statements (see Note 11). When those securities are redeemed, e.g., to pay Social Security benefits, the Government will need to obtain the resources necessary to reimburse the trust funds. The sum of debt held by the public and intragovernmental debt equals gross federal debt, which (with some adjustments), is subject to a statutory ceiling (i.e., the debt limit). At the end of FY 2017, debt subject to the statutory limit (DSL) was \$20.2 trillion (see sidebar). See Note 25, Subsequent Events for developments since the end of the fiscal year.

Prior to 1917, Congress approved each debt issuance. In 1917, to facilitate planning in World War I, Congress and the President established a dollar ceiling for federal borrowing. With the Public Debt Act of 1941 (Public Law 77-7), Congress and the President set an overall limit of \$65 billion on Treasury debt obligations that could be outstanding at any one time. Since then, Congress and the President have enacted a number of measures affecting the debt limit, including several in recent years. Congress and the President most recently suspended the debt limit from September 8, 2017 through December 8, 2017. It is important to note that increasing or suspending the debt limit does not increase spending or authorize new spending; rather, it permits the United States to continue to honor pre-existing commitments to its citizens, businesses, and investors domestically and around the world.

The federal debt held by the public measured as a percent of GDP (debt-to-GDP ratio) (Chart F) compares the country's debt to the size of its economy, making this measure sensitive to changes in both. Over time, the debt-to-GDP ratio has varied widely:

- For most of the nation's history, through the first half of the 20th century, the debt-to-GDP ratio has tended to increase during wartime and decline during peacetime.
- Chart F shows that wartime spending and borrowing pushed the debt-to-GDP ratio to an all-time high of 106 percent in 1946, soon after the end of World War II, but it decreased rapidly in the post-war years.
- The ratio grew rapidly from the mid-1970s until the early 1990s. Strong economic growth and fundamental fiscal decisions, including measures to reduce the federal deficit and implementation of binding "Pay As You Go" (PAYGO) rules (which require that new tax or spending laws not add to the deficit), generated a significant decline in the debt-to-GDP ratio, from a peak of 48 percent in 1993-1995, to 31 percent in 2001.
- During the first decade of the 21st century, PAYGO rules were allowed to lapse, significant tax cuts were implemented, entitlements were expanded, and spending related to defense and homeland security increased. By September 2008, the debt-to-GDP ratio was 39 percent of GDP.
- PAYGO rules were reinstated in 2010, but the extraordinary demands of the last economic and fiscal crisis and the consequent actions taken by the federal government, combined with slower economic growth in the wake of the crisis, pushed the debt-to-GDP ratio up to 74 percent by the end of FY 2014.
- The debt was 76 percent of GDP at the end of FY 2017.²⁰

²⁰10/20/2017 press release: [Joint Statement of OMB Director, Mick Mulvaney and Treasury Secretary, Steven T. Mnuchin.](#)

The Economy in Fiscal Year 2017

A review of the nation's key macroeconomic indicators can help place the discussion of the Government's financial results in a broader context. As summarized in Table 5, the economic expansion accelerated during FY 2017 and the economy continued to generate jobs, though at a slower pace. The unemployment rate trended lower, and by the end of the fiscal year, stood at its lowest level since February 2001.

Real (i.e., inflation-adjusted) GDP expanded 2.3 percent during FY 2017, accelerating from the 1.5 percent advance recorded over the four quarters of FY 2016. The acceleration reflected a rebound in business fixed investment, particularly in the energy sector, a significant contribution from net exports, and a small contribution from inventory investment. Growth of consumer spending remained strong, growing 2.6 percent in FY 2017 compared with a rise of 2.8 percent in FY 2016. Recovery in the housing sector continued through the fiscal year, but at a slower pace, with residential fixed investment increasing by 1.2 percent, compared with an advance of 2.6 percent during FY 2016. Nonresidential fixed investment jumped 4.6 percent during FY 2017, reversing from a 0.7 percent decline during the previous fiscal year.

Labor market conditions improved further during FY 2017. The economy added 1.9 million nonfarm payroll jobs during the course of the fiscal year, compared with the 2.6 million jobs added during FY 2016. On a monthly basis, nonfarm payroll employment rose at an average rate of 157,000 jobs per month, somewhat less than the average monthly increase of 219,000 in FY 2016. The number of unemployed persons declined significantly to 6.8 million in September 2017, down from 7.9 million a year earlier. The unemployment rate declined 0.7 percentage point, from 4.9 percent in September 2016 to 4.2 percent in September 2017. At the end of FY 2017, the unemployment rate was 5.8 percentage points lower than the peak of 10.0 percent, reached in October 2009.

Headline inflation accelerated during FY 2017, as energy prices trended higher, but core inflation (the Consumer Price Index (CPI) excluding food and energy) slowed. CPI rose 2.2 percent during FY 2017, up from 1.5 percent during FY 2016, and a flat reading in FY 2015. Underlying core inflation decelerated to 1.7 percent, compared with a reading of 2.2 percent during FY 2016.

Growth of real disposable (i.e., after-tax) personal income was stable during FY 2017, as a small pickup in growth of nominal disposable personal income was partially offset by faster inflation. The level of corporate profits grew 5.4 percent during FY 2017, after a decline of 1.6 percent during the previous fiscal year.

Table 5: National Economic Indicators*

	FY 2017	FY 2016
Real GDP Growth	2.3%	1.5%
Residential Investment Growth	1.2%	2.6%
Average monthly payroll job change (thousands)	157	219
Unemployment rate (percent, end of period)	4.2%	4.9%
Consumer Price Index (CPI)	2.2%	1.5%
CPI, excluding food and energy	1.7%	2.2%

* Some FY2016 data may differ from the FY2016 Financial Report due to updates and revisions.

The Long-Term Fiscal Outlook: “Where We Are Headed”

An important purpose of the *Financial Report* is to help citizens understand current fiscal policy and the importance and magnitude of policy reforms necessary to make it sustainable. This *Financial Report* includes the *Statements of Long-Term Fiscal Projections* and a related Note Disclosure (Note 23). The Statements display the present value of 75-year projections of the federal government’s receipts and non-interest spending²¹ for FY 2017 and FY 2016. The projections and accompanying discussion do not reflect the *Tax Cuts and Jobs Act* (P.L. 115-97) enacted on December 22, 2017. Additional information about these projections may be found in Note 23 and the RSI section of this *Financial Report*; and additional information about the *Tax Cuts and Jobs Act* may be found in Note 25, *Subsequent Events*.

Fiscal Sustainability

A sustainable fiscal policy is one where the debt-to-GDP ratio is stable or declining over the long term. The projections discussed here show the impact on the ratio if current policy (i.e., current law, with certain adjustments, such as extension of expiring policies that are expected to continue)²² is assumed to continue indefinitely. The projections are therefore neither forecasts nor predictions. As policy changes are enacted, actual financial outcomes will be different than those projected.

The projections in this *Financial Report* show that current policy is not sustainable. As discussed below, if current policy is left unchanged, the debt-to-GDP ratio is projected to fall about 4 percentage points by 2023 before commencing a steady rise to 297 percent in 2092 and is projected to rise continuously thereafter. Preventing the debt-to-GDP ratio from rising over the next 75 years is estimated to require some combination of spending reductions and revenue increases that amount to 2.0 percent of GDP over the period. While this estimate of the “75-year fiscal gap” is highly uncertain, it is nevertheless nearly certain that current fiscal policies cannot be sustained indefinitely.

Delaying action to reduce the gap increases the magnitude of spending and/or revenue changes necessary to stabilize the debt-to-GDP ratio. For example, reforms necessary to close the gap rises about 20 percent if reforms are delayed ten years, and about 50 percent larger if reform is delayed 20 years.

The estimates of the cost of policy delay assume policy does not affect GDP or other economic variables. Delaying fiscal adjustments for too long raises the risk that growing federal debt would increase interest rates, which would, in turn, reduce investment and ultimately economic growth.

The Primary Deficit, Interest, and Debt

The primary deficit – the difference between non-interest spending and receipts – is the determinant of the debt-to-GDP ratio over which the Government has the greatest control (the other determinants include interest rates and growth in GDP). Chart G shows receipts, non-interest spending, and the difference – the primary deficit – expressed as a share of GDP. The primary deficit-to-GDP ratio spiked during 2009 through 2012 due to the 2008-09 financial crisis and the ensuing severe recession, as well as the increased spending and temporary tax reductions enacted to stimulate the economy and support recovery. These elevated primary deficits resulted in a sharp increase in the ratio of debt to GDP, which rose from 39 percent at the end of 2008 to 70 percent at the end of 2012. As an economic recovery took hold, the primary deficit ratio fell, averaging 1.9 percent of GDP over 2013 through 2017. This primary deficit ratio was still high enough that the debt increased further relative to GDP, ending 2017 at 76 percent. The primary deficit is projected to shrink further through 2021 as discretionary spending limits called for in the BCA continue and the economic recovery boosts tax receipts. After 2021, however, increased spending for Social Security and health programs due to the ongoing retirement of the baby boom generation and increases in the price of health care services is projected to result in increasing primary deficits that reach 1.1 percent of GDP in 2027. The primary deficit peaks at 2.1 percent of GDP in 2037 and 2038, gradually decreases beyond that point as aging of the population continues at a slower pace and reaches 0.6 percent of GDP in 2088 through 2091.

Primary deficit trends are heavily influenced by tax receipts. Receipts as a share of GDP were markedly depressed in 2009 through 2012 because of the recession and tax reductions enacted as part of the *American Recovery and Reinvestment Act of 2009* (ARRA) and the *Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010*. The share has increased in subsequent years and was 17.2 percent in 2017, similar to its 30-year average due to continued economic growth and the higher tax rates enacted under the ATRA.

²¹ For the purposes of the Statement of Long-Term Fiscal Projections and this analysis, spending is defined in terms of outlays. In the context of federal budgeting, spending can either refer to: (1) budget authority – the authority to commit the government to make a payment; (2) obligations – binding agreements that will result in either immediate or future payment; or (3) outlays, or actual payments made.

²² Current policy in the projections is based on current law, but includes certain adjustments, such as extension of certain policies that expire under current law but are routinely extended or otherwise expected to continue (e.g., reauthorization of the Supplemental Nutrition Assistance Program).

After 2020, receipts are projected to grow slightly more rapidly than GDP over the projection period as increases in real incomes cause more taxpayers and a larger share of income to fall into the higher individual income tax brackets.

Non-interest spending as a share of GDP is projected to stay at or below its current level of about 19 percent until 2025, and to then rise gradually to 21.5 percent of GDP by 2037 and 21.8 percent of GDP in 2070 through 2092. Slight reductions in the non-interest spending share of GDP over the next few years are mostly due to caps on discretionary spending, which hold growth in discretionary spending below GDP growth. The subsequent increases are principally due to faster growth in Medicare, Medicaid, and Social Security spending (see Chart G).

The aging of the baby boom generation over the next 25 years is projected to increase the Social Security, Medicare, and Medicaid spending shares of GDP by about 1.1 percentage points, 1.5 percentage points, and 0.5 percentage points, respectively. After 2042, the Social Security spending share of GDP remains relatively stable, while the combined Medicare and Medicaid spending share of GDP continues to increase, albeit at a slower rate, due to projected increases in health care costs.

One of the most important assumptions underlying the projections is the future growth of health care costs. As discussed in Note 22, these future growth rates – both for health care costs in the economy generally and for Federal health care programs such as Medicare, Medicaid, and Affordable Care Act (ACA) exchange subsidies – are highly uncertain. In particular, enactment of the ACA in 2010 and the *Medicare Access and CHIP Reauthorization Act (MACRA)* in 2015 established cost controls for Medicare hospital and physician payments whose long-term effectiveness is still to be demonstrated. The Medicare spending projections in the long-term fiscal projections are based on the projections in the 2017 Medicare trustees’ report, which assume the ACA and MACRA cost control measures will be effective in producing a substantial slowdown in Medicare cost growth. As discussed in Note 22, the Medicare projections are subject to much uncertainty about the ultimate effects of these provisions to reduce health care cost growth. For the long-term fiscal projections, that uncertainty also affects the projections for Medicaid and exchange subsidies, because the cost per beneficiary in these programs is assumed to grow at the same reduced rate as Medicare cost growth per beneficiary.

The primary deficit-to-GDP projections in Chart G, projections for interest rates, and GDP growth rates are the primary determinants for the debt-to-GDP ratio projections shown in Chart H. That ratio was 76 percent at the end of FY 2017 and under current policy is projected to be 74 percent in 2027, 136 percent in 2047, and 297 percent in 2092. The debt-to-GDP ratio rises continually despite primary deficits that flatten out because higher levels of debt lead to higher net interest expenditures, and higher net interest expenditures lead to higher debt.²³ The continuous rise of the debt-to-GDP ratio after 2023 indicates that current policy is unsustainable.

These debt-to-GDP projections are generally higher than the corresponding projections in both the FY 2016 and FY 2015 *Financial Reports*. For example, the debt-to-GDP projection for 2090 (the final projection year for the 2015 report) is 289 percent in this year's *Financial Report*, 249 percent in the FY 2016 *Financial Report*, and 223 percent in the FY 2015 *Financial Report*.²⁴

Subsequent to the close of the reporting period, and after the preparation of these long-term fiscal projections, Congress passed and the President signed the *Tax Cuts and Jobs Act* (Public Law 114-411) which enacts comprehensive reforms to the individual and corporation income tax code. See Note 25, Subsequent Events, for more information.

The Fiscal Gap and the Cost of Delaying Policy Reform

The 75-year fiscal gap is one measure of the degree to which current fiscal policy is unsustainable. It is the amount by which primary surpluses over the next 75 years must, on average, rise above current-policy levels in order for the debt-to-GDP ratio in 2092 to remain at its level in 2017 (76 percent). This fiscal gap is estimated to equal 2.0 percent of GDP. The projections show that projected primary deficits average 1.2 percent of GDP over the next 75 years under current policies. If policies were adopted to eliminate the fiscal gap, the average primary surplus over the next 75 years would be 0.8 percent of GDP, 2.0 percentage points higher than the projected present value of receipts less non-interest spending shown in the basic financial statement. The 75-year fiscal gap represents 10.0 percent of 75-year present value receipts and 9.4 percent of 75-year present value non-interest spending. The fiscal gap was estimated at 1.6 percent in the 2016 *Financial Report*, 0.4 percentage points lower than estimated in this Report.

In these projections, closing the fiscal gap requires running substantially positive primary surpluses, rather than simply eliminating the primary deficit. The primary reason is that the projections assume future interest rates will exceed the growth rate of GDP. Achieving primary balance (that is, running a primary surplus of zero) implies that the debt grows each year by the amount of interest spending, which under these assumptions would result in debt growing faster than GDP.

Table 6 shows the cost of delaying policy reform to close the fiscal gap by comparing policy reforms that begin in three different years. Immediate reform would require increasing primary surpluses by 2.0 percent of GDP on average between 2018 and 2092 (i.e., some combination of reducing spending and increasing revenue by a combined 2.0 percent of GDP on average

Period of Delay	Change in Average Primary Surplus
Reform in 2018 (No Delay)	2.0 percent of GDP between 2018 and 2092
Reform in 2028 (Ten-Year Delay)	2.4 percent of GDP between 2028 and 2092
Reform in 2038 (Twenty-Year Delay)	3.0 percent of GDP between 2038 and 2092

Note: Reforms taking place in 2017, 2027, and 2037 from the 2016 *Financial Report* were 1.6, 1.9, and 2.4 percent of GDP, respectively.

²³ The change in debt each year is also affected by certain transactions not included in the budget deficit, such as changes in Treasury's cash balances and the nonbudgetary activity of Federal credit financing accounts. These transactions are assumed to hold constant at about 0.4 percent of GDP each year, with the same effect on debt as if the primary deficit was higher by that amount.

²⁴ See the Note 23 of the *FY 2016 Financial Report of the U.S. Government* for more information about changes in the long term fiscal projections between FY 2015 and FY 2016.

over the 75-year projection period). Table 6 shows that delaying policy reform forces larger and more abrupt policy reforms over shorter periods. For example, if policy reform is delayed by 10 years, any reforms must increase the primary surplus by 2.4 percent of GDP on average between 2028 and 2092. Similarly, delaying reform by 20 years requires primary surplus increases of 3.0 percent of GDP on average between 2038 and 2092. The differences between the required primary surplus increases that start in 2028 and 2038 (2.4 and 3.0 percent of GDP, respectively) and that which starts in 2018 (2.0 percent of GDP) is a measure of the additional burden that delay would impose on future generations. Future generations are harmed by such a policy reform delay, because the higher the primary surplus is during their lifetimes the greater the difference is between the taxes they pay and the programmatic spending from which they benefit.

Conclusion

The past nine years saw the national debt nearly double as a share of GDP, bringing it to a level not seen since shortly after World War II. The debt-to-GDP ratio is projected to remain relatively stable over the next decade and then rise indefinitely if current policies are unchanged, which implies that current policies are not sustainable and must ultimately change. As long as policy changes are not so abrupt as to hinder economic growth, the sooner policies are adopted to avert these trends, the smaller the changes to revenue and/or spending will need to be to achieve sustainability over the long term. While the estimated magnitude of the fiscal gap is subject to a substantial amount of uncertainty, there is little doubt that current policy is not sustainable.

These long-term fiscal projections and the topic of fiscal sustainability are discussed in further detail in Note 23 and the RSI section of this *Financial Report*.

Social Insurance

The long-term fiscal projections reflect Government receipts and spending as a whole. The Statement of Social Insurance (SOSI) focuses on the Government's "social insurance" programs: Social Security, Medicare, Railroad Retirement, and Black Lung.²⁵ For these programs, the SOSI reports: (1) the actuarial present value of all future program revenue (mainly taxes and premiums) - excluding interest - to be received from or on behalf of current and future participants; (2) the estimated future scheduled expenditures to be paid to or on behalf of current and future participants; and (3) the difference between (1) and (2). Amounts reported in the SOSI and in the RSI section in this *Financial Report* are based on each program's official actuarial calculations.

Table 7 summarizes amounts reported in the SOSI, showing that net social insurance expenditures are projected to be \$49.0 trillion over 75 years as of January 1, 2017 for the "Open Group," an increase of \$2.3 billion over net expenditures of \$46.7 trillion projected in the 2016 *Financial Report*.²⁶ The current-law 2017 amounts reported for Medicare reflect the physician payment levels expected under the MACRA payment rules and the ACA-mandated reductions in other Medicare payment rates, but not the payment reductions and/or delays that would result from trust fund depletion.²⁷ Similarly, current-law projections for Social Security do not reflect benefit payment reductions and/or delays that would result from fund depletion. By accounting convention, the transfers of general revenues are eliminated in the consolidation of the SOSI at the governmentwide level and as such, the general revenues that are used to finance Medicare Parts B and D are not included in these calculations even though the expenditures on these programs are included. For the FY 2017 and 2016 SOSI, the amounts eliminated totaled \$30.0 trillion and \$28.7 trillion, respectively. SOSI programs and amounts are included in the broader fiscal sustainability analysis in the previous section, although on a slightly different basis (as described in Note 23).

The amounts reported in the SOSI provide perspective on the Government's long-term estimated exposures for social insurance programs. These amounts are not considered liabilities in an accounting context. Future benefit payments will be recognized as expenses and liabilities as they are incurred based on the continuation of the social insurance programs' provisions contained in current law. The social insurance trust funds account for all related program income and expenses. Medicare and Social Security taxes, premiums, and other income are credited to the funds; fund disbursements may only be made for benefit payments and program administrative costs. Any excess revenues are invested in special non-marketable U.S. Government securities at a market rate of interest. The trust funds represent the accumulated value, including interest, of all prior program surpluses, and provide automatic funding authority to pay cover future benefits.

²⁵ The *Black Lung Benefits Act* (BLBA) provides for monthly payments and medical benefits to coal miners totally disabled from pneumoconiosis (black lung disease) arising from their employment in or around the nation's coal mines. See http://www.dol.gov/owcp/regs/compliance/ca_main.htm

²⁶ 'Closed' Group and 'Open' Group differ by the population included in each calculation. From the SOSI, the 'Closed' Group includes: (1) participants who have attained eligibility and (2) participants who have not attained eligibility. The 'Open' Group adds future participants to the 'Closed' Group. See 'Social Insurance' in the Required Supplementary Information section in this *Financial Report* for more information.

²⁷ The *Medicare Access and CHIP Reauthorization Act* (MACRA) of 2015 permanently replaces the sustainable growth rate (SGR) formula, which was used to determine payment updates under the Medicare physician fee schedule with specified payment updates through 2025. The changes specified in MACRA also establish differential payment updates starting in 2026 based on practitioners' participation in eligible alternative payment models; payments are also subject to adjustments based on the quality of care provided, resource use, use of certified electronic health records, and clinical practice improvement.

Table 7: Social Insurance Future Expenditures in Excess of Future Revenues					
Dollars in Trillions	2017	2016	Increase / (Decrease)

Total (Closed Group)	(5.5%)	(5.3%)			

Source: Statement of Social Insurance (SOSI). Amounts equal estimated present value of projected revenues and expenditures for scheduled benefits over the next 75 years of certain 'Social Insurance' programs (e.g., Social Security, Medicare). 'Open Group' totals reflect all current and projected program participants during the 75-year projection period. 'Closed Group' totals reflect only current participants.

* GDP values used are from the 2017 & 2016 Social Security and Medicare Trustees Reports and represent the present value of GDP over the 75-year projection period. As the GDP used for Social Security and Medicare differ slightly in the Trust Fund Reports, the two values are averaged to estimate the 'Other' and Total Net Social Insurance Expenditures as percent of GDP.

Table 8 identifies the principal reasons for the changes in projected social insurance amounts during 2017 and 2016.

¹ Relates to SSA.

² Relates to HHS.

Note: Some totals may not equal sum of components due to rounding.

The following briefly summarizes the significant changes for the current valuation (as of January 1, 2017) as disclosed in Note 22, Social Insurance. See Note 22 for additional information.

- Change in valuation period (relates to both Social Security and Medicare): This change replaces a small negative net cash flow for 2016 with a much larger negative net cash flow for 2091. As a result, the present value of the estimated future net cash flows decreased (became more negative) by \$2.0 trillion.

- Changes in economic data and assumptions (relates to Social Security only): For the current valuation, the only change to any of the ultimate assumptions was to the ultimate average real wage differential,²⁸ which was assumed to be 1.20 percent, an approximate 0.01 percent decrease from the previous year. The assumed real-wage differential for the first 10 years of the projection period was also lower than previous years. Otherwise, the ultimate economic assumptions for the current valuation period are the same as those for the prior year valuation. However, the starting economic values and the way these values transition to the ultimate assumptions were changed. Most significantly, an assumed weaker recovery from the recent recession than previously expected led to a reduction in the ultimate level of actual and potential GDP of about 1.0 percent for all years after the short-range period. Overall, changes to these assumptions caused the present value of the estimated future net cash flows to decrease (become more negative) by \$576 billion.
- Change in Projection Base (relates to Medicare only): Actual income and expenditures in 2016 were different than what was anticipated when the 2016 Medicare Trustees Report projections were prepared. Part A income was higher and expenditures were lower than anticipated, based on actual experience. Part B total income and expenditures were higher than estimated based on actual experience. For Part D, actual income and expenditures were both lower than prior estimates. Actual experience of the Medicare Trust Funds between January 1, 2016 and January 1, 2017 is incorporated in the current valuation and is slightly more favorable than projected in the prior valuation. The net impact of the Part A, B, and D projection base changes is an increase (become less negative) in the estimated future net cash flow by \$700 billion.

Projected net expenditures for Medicare Parts A and B declined significantly between FY 2009 and FY 2010 reflecting provisions of the ACA. As reported in Note 22, uncertainty remains about whether the projected cost savings and productivity improvements will be sustained in a manner consistent with the projected cost growth over time. Note 22 includes an alternative projection to illustrate the uncertainty of projected Medicare costs. As indicated earlier, GAO disclaimed opinions on the 2017, 2016, 2015, 2014 and 2013 SOSI because of these significant uncertainties.

Costs as a percent of GDP of both Medicare and Social Security, which are analyzed annually in the Medicare and Social Security Trustees' Reports, are projected to increase substantially through the mid-2030s because: (1) the number of beneficiaries rises rapidly as the baby-boom generation retires and (2) the lower birth rates that have persisted since the baby boom cause slower growth in the labor force and GDP.²⁹ According to the Medicare Trustees' Report, spending on Medicare is projected to rise from its current level of 3.6 percent of GDP to 5.6 percent in 2041 and to 5.9 percent in 2091.³⁰ As for Social Security, combined spending is projected to generally increase from its current level of 4.9 percent of GDP to about 6.1 percent by 2037, declining to 5.9 percent by 2050 and then generally increase to 6.1 percent by 2091. Table 9 summarizes additional current status and projected trend information for the Medicare and Social Security Trust Funds.

Fund	Projected Depletion	Projected Post-Depletion Trend
Medicare Hospital Insurance (HI)*	2029 (2028 in FY 2016 Report)	In 2029, trust fund income is projected to cover 88 percent of benefits, decreasing to 81 percent in 2041, then increasing to 88 percent by 2091.
Combined Old-Age Survivors and Disability Insurance (OASDI)**	2034 (unchanged from FY 2016 Report)	In 2034, trust fund income is projected to cover 77 percent of scheduled benefits, decreasing to about 73 percent by 2091.

* Source: 2017 Medicare Trustees Report ** Source: 2017 OASDI Trustees Report

Projections assume full Social Security and Medicare benefits are paid after fund depletion contrary to current law.

As previously discussed and as noted in the Trustees' Reports, it is apparent that these programs are on a fiscally unsustainable path. Additional information from the Trustees Reports may be found in the RSI section of this *Financial Report*.

²⁸ The real wage differential is the annual percentage change in the average covered wage, minus the annual percentage change in the CPI. Source: www.ssa.gov/oact/tr/2014/V_B_econ.html Item 4.

³⁰ Percent of GDP amounts are expressed in gross terms (including amounts financed by premiums and state transfers).

Agency Audit Results, Systems, Controls, and Legal Compliance

Audit

Since the passage of the CFO Act of 1990, the federal financial community has made significant progress in financial accounting and reporting. As shown in Table 10, for FY 2017, 21 of the 24 CFO Act agencies obtained an opinion from the independent auditors on their financial statements.³¹ In addition, 45 auditor-identified material weaknesses were reported at the beginning of FY 2017 and 40 were reported at the end of the year. An increasing number of federal agencies have adopted and maintained disciplined financial reporting operations, implemented effective internal controls over financial reporting, and integrated transaction processing with accounting records. These efforts improved the results of financial statement audits. However, weaknesses in financial management practices continue to prevent three of the CFO Act agencies, and the Government as a whole, from achieving an audit opinion.

Table 10: Audit Opinions and Auditor-Reported Material Weaknesses: FY 2017

Agency	Audit Opinion	Auditor-Reported Material Weaknesses				
		Beginning	New	Resolved	Consolidated	Ending
Department of Agriculture (USDA)	Unmodified/Not Audited	2	0	0	0	2

Totals		45	5	7	3	40

*Audit results for DOE were not available as of the issuance of this *Financial Report*.

Ending Total assumes DOE has zero material weaknesses as of September 30, 2017.

³¹ The 21 agencies include HHS, which received unmodified ("clean") opinions on all statements except the SOSI and the SCSIA; DOL, which received clean opinions on all statements except the SCSIA; and USDA, which received a clean opinion only on its balance sheet. DOE expects to issue its audited AFR after the release of this *Financial Report*. For more information, see MD&A footnote #7.

Systems

Federal agencies improved, but continue to face challenges, in implementing financial management systems that meet federal requirements. The number of CFO Act agencies reporting lack of substantial compliance with one or more of the three Section 803(a) requirements of the *Federal Financial Management Improvement Act* (FFMIA) fell to eight in FY 2017 from nine in FY 2016, and the number of auditors reporting lack of substantial compliance with one or more of the three Section 803(a) FFMIA requirements fell to 10 in FY 2017 from 11 in FY 2016.³²

Controls

Federal managers are responsible for developing and maintaining effective internal controls. Internal controls help to ensure effective and efficient operations, reliable financial reporting, and compliance with applicable laws and regulations. The safeguarding of assets is a goal of each of these three objectives.

In response to major management challenges to achieving their mission and goals, agencies continue to recognize the utility of Enterprise Risk Management (ERM) as a tool to identify, assess, mitigate, manage and prepare for risk. ERM contributes to risk-informed decision-making, adopting a proactive rather than a reactive approach to risk, and fostering a risk-aware culture. Under ERM internal controls are not limited to compliance and financial reporting. Instead, internal controls are a means to address management challenges that cut across multiple agency functions. ERM is currently used in the private and public sectors in the U.S. and internationally, including by the governments of the United Kingdom, Canada, and Japan. OMB has promoted ERM as a management tool and the 2016 update to OMB Circular A-123, *Management's Responsibility for Enterprise Risk Management and Internal Control*, explains ERM and the importance of integrating ERM with internal control processes.

OMB Circular No. A-123 implements the requirements of 31 U.S.C. 3512 (c), (d) (commonly known as the *Federal Managers' Financial Integrity Act* or FMFIA). The Circular's focus for internal controls is on providing agencies a framework for assessing and managing risks more strategically and effectively. The Circular reflects changes incorporated in GAO's updated Standards for Internal Control in the Federal Government and contains multiple appendices that address one or more of the objectives of effective internal control, specifically:

- Appendix A provides a methodology for agency management to assess, document, test, and report on internal controls over financial reporting;
- Appendix B requires agencies to maintain internal controls that reduce the risk of fraud, waste, and error in government charge card programs;
- Appendix C implements the requirements for effective estimation and remediation of improper payments; and
- Appendix D defines new requirements for determining compliance with the FFMIA that are intended to reduce the cost, risk, and complexity of financial system modernizations.

As noted above, the total number of reported material weaknesses for the CFO Act agencies as of the issuance of this *Financial Report* was 40³³ and 45 for FYs 2017 and 2016, respectively. Effective internal controls are a challenge at the agency level and at the governmentwide level, with GAO reporting that at the governmentwide level, material weaknesses resulted in ineffective internal control over financial reporting. While progress is being made at many agencies and across the Government in identifying and resolving internal control deficiencies, continued work is needed.

Legal Compliance

Federal agencies are required to comply with a wide range of laws and regulations, including appropriations, employment, health and safety, among others. Responsibility for compliance rests with agency management and compliance is addressed as part of agency financial statement audits. Agency auditors test for compliance with selected laws and regulations related to financial reporting and certain individual agency audit reports contain instances of noncompliance. None of these instances were material to the governmentwide financial statements; however, GAO reported that its work on compliance with laws and regulations was limited by the material weaknesses and scope limitations discussed in its report.

³² The FY 2017 results do not include the Department of Energy (DOE). For FY 2016, DOE and its auditor noted no lack of compliance with one or more of the three section 803(a) requirements of the FFMIA. The FY 2016 results include DOD, HUD, and NSF, which were pending when the FY 2016 FR was released; DOD, HUD, and their auditors noted lack of compliance with one or more of the FFMIA section 803(a) requirements for FY 2016.

³³ The FY 2017 reported results do not include DOE, which had no material weaknesses in FY 2016. As shown in Table 10, if the number of material weaknesses for DOE does not change between FY 2016 and FY 2017, the total for CFO Act agencies for FY 2017 will be 40. The FY 2016 results include DOD, HUD, and NSF, which were pending when the FY 2016 FR was released; HUD's material weaknesses increased by two for 2016, which was not reflected in the FY 2016 FR.

Financial Management Progress and Priorities

Improving the Quality, Utility, and Transparency of Federal Financial Information

The *Digital Accountability and Transparency Act of 2014* (DATA Act), signed on May 9, 2014, sets forth a clear vision for the future of federal spending transparency. The Act amended the *Federal Funding Accountability and Transparency Act of 2006* (FFATA) by requiring that all federal spending be displayed on a website in searchable, downloadable, and machine-readable format and by requiring publication of agency financial data.

In May 2017, OMB and Treasury launched beta.USAspending.gov, a new website connecting financial and award data for the first time for more than 75 federal agencies and in August 2017, OMB and Treasury submitted to Congress a report on the pilot to Reduce Administrative Burden required under section 5 of the DATA Act. OMB and Treasury are continuing to make regular improvements to the completeness of the data and quality of the display.

In November 2017, the Government Accountability Office (GAO) and many agency Offices of Inspector General published audits of the quality of the data as required under the DATA Act. OMB, Treasury, and agencies are reviewing the results of these audits in order to make further improvements to the quality of the data and display in the coming year.

Improving the quality, utility and transparency of federal spending information reflects a commitment to openness, as identified in the U.S. Government's National Action Plan for Open Government.

Improving Program Efficiency

Payment Integrity

Addressing improper payments is necessary for legal compliance and the efficient use of financial resources. In FY 2017, OMB analyzed program-by-program improper payment data and concluded that it was more useful than aggregate improper payment data. For this reason, in November 2017, PaymentAccuracy.gov was updated with program-specific information, and now includes both the amount of improper payments that result in a monetary loss to the government and the amount of improper payments that does not result in monetary loss.

For FY 2017, there were improvements in four of the five programs with the highest payment error activity, including the Earned Income Tax Credit, Medicare Fee for Service (FFS), Medicaid, and Medicare Part C for both monetary and non-monetary losses; however, in some cases these improvements were in the statistical margin of error and may not represent actual changes in losses. Medicare FFS showed the largest improvement, reporting \$36 billion in improper payments for FY 2017 compared to \$41 billion in improper payments for FY 2016. This was primarily driven by the Centers for Medicare and Medicaid Services (CMS) ongoing efforts to provide more individualized provider education and clarification of Medicare coverage and documentation requirements. In FY 2017, agencies recovered approximately \$20 billion in overpayments through payment recapture audits and other methods (just as in FY 2015 and 2016).

In FY 2018, OMB will work with agencies, the Chief Financial Officers Council (CFOC), and other stakeholders to develop strategies to minimize and eliminate improper payments and to develop a comprehensive strategy that finds customized solutions for agencies that materially contribute to improper payments rates and methods to address root causes. In addition, OMB will continue to rely on agency IG recommendations for additional improvements that can be made in the prevention of improper payments within specific programs.

Other efforts to prevent improper payments leverage advanced data analytics and improved technologies. As part of the continuation of the Do Not Pay Initiative, the Treasury Working System provides agencies a single-point of entry to access data and matching services to help detect, prevent, and recover improper payments during the award or payment lifecycle. Treasury has also begun analyzing data across agencies to identify potential duplicative benefit payments in programs with related missions and beneficiaries. In addition, agency payment integrity tools include the CMS Fraud Prevention System (FPS); the Department of Defense (DOD) Business Activity Monitoring (BAM) tool; the Social Security Administration's (SSA) efforts to intercept payments to beneficiaries who have died or been incarcerated; and the Department of Labor's Unemployment Insurance (UI) Integrity Center of Excellence, a federal-state partnership that helps prevent, detect, and reduce improper payments in the UI program.

The Treasury Working System has 56 agencies performing matches against several databases (e.g., Death Master File, System for Award Management, Treasury Debt Check). In FY 2017, agencies screened over \$1.3 billion payments through the Treasury Working System using their payment integration function. While the vast majority of these payments were determined to be proper, the Office of Personnel Management stopped over \$25 million in improper payments. In addition to the Treasury Working System, the agency-specific integrity centers have demonstrated solid returns. Currently, SSA has 23 computer matching agreements that generate over \$7 billion in annual savings. During FY 2016, HHS took administrative action against 1,044 providers and suppliers as a result of the CMS FPS, resulting in an estimated \$527 million in identified savings. For FY 2017, the DOD BAM tool prevented \$1.4 billion in improper payments in DOD's commercial payment systems.

Combating improper payments within the federal government is a priority for OMB and agencies who will work to share government data while maintaining privacy. Going forward, the goal of data transparency is to provide relevant granularity that makes it easier for agencies to take action on root cause issues.

Grants Management

The federal government awards approximately \$700 billion in federal financial assistance each year to state and local governments and nonprofit organizations. Federal agencies have oversight responsibilities for the funds that they award to nonfederal entities. The effective and efficient oversight of these awards helps agencies to achieve mission success while protecting these resources from fraud, waste, and mismanagement and improper payment. Federal awarding agencies are taking measures to address areas where needed improvement in federal oversight has been identified. The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, 2 CFR 200 (Uniform Guidance), issued in December of 2014, is the authoritative OMB guidance governing federal financial assistance, which is comprised primarily of grants.

Since adoption of the Uniform Guidance, OMB and 28 federal awarding agencies have been diligently working to implement these requirements.

In addition to Uniform Guidance implementation, OMB in collaboration with the former Council on Financial Assistance Reform (COFAR) and the CFOC recently published the Financial Assistance Career Roadmap. This Roadmap is intended to serve as a resource for agencies and financial assistance professionals to ensure that they have the proper skills and competencies to perform their duties. OMB and COFAR also developed an interactive on-line Grant Training program, consisting of five modules, to aid agencies in training their staff in grant requirements and management.

Starting with FY 2015 submissions, all annual Single Audits of grantees that expend more than \$750,000 in federal funds (approximately 38,000) have been available publicly on the Federal Audit Clearinghouse website (<https://harvester.census.gov/facweb/Default.aspx>). These compliance audits are a valuable tool for agencies and pass-through entities to monitor and manage federal funds efficiently and effectively.

OMB and the federal awarding agencies are committed to working together to continue to ensure that the government promotes effective stewardship over its federal financial assistance funds.

Enhancing Program Efficiency through Mission Support

Mission Support Services and Financial IT

The federal financial management infrastructure exists in a complex environment of legacy information technology, customized tools built to unique requirements, and business processes, that do not fully leverage modern technology. The sharing of financial technology and services has been successful for smaller agencies, but has not met expectations for larger agencies. A cross-agency subgroup of the CFOC developed the core business framework for financial management that was used in the fall of 2017 to explore industry capabilities for smarter use of technology in federal financial management. This information will be included in overall efforts to develop and implement recommendations and solutions that can improve federal financial management.

Efficient Use of Real Property Assets

The federal domestic building inventory is diverse and contains 252,000 buildings requiring approximately \$18.8 billion in annual operation and maintenance expenditures, including approximately \$7.3 billion in annual lease costs. The domestic portfolio is 2.6 billion square feet in size and the total replacement value of the government's 232,000 owned buildings is approximately \$1 trillion, with a repair need of \$115 billion. Within both the owned and leased inventories, there are opportunities to realize cost savings by utilizing space more efficiently and reducing the portfolio. In 2013, the "Freeze the Footprint" (FTF) Policy (OMB Management Procedures Memorandum 2013-02) was issued, requiring agencies to freeze their real property footprint. From FY 2013 to FY 2015, when the FTF policy expired, agencies reduced their federal domestic office and warehouse space by 24.7 million square feet. OMB estimates that this 24.7 million square foot reduction will generate \$370 million of annual cost avoidance for the government from FY 2016 onward. To improve the quality of federal real property data in annual Performance and Accountability Reports (PARs) or Agency Financial Reports (AFRs), agencies were required to validate and report "Freeze the Footprint" square footage and associated operations and maintenance costs in their 2014 through 2016 PARs or AFRs.

In FY 2017, the Government issued the National Strategy for the Efficient Use of Real Property (Strategy) and its companion implementation policy, the Reduce the Footprint (RTF) policy. The Strategy provides a strategic framework for agencies to measure the efficiency of their real property portfolios in order to identify and prioritize efficiency actions that reduce portfolio size and cost.

The RTF policy requires that agencies reduce the size of the federal real property portfolios to improve utilization of government-owned buildings and reduce reliance on leasing, lower the number of excess and underutilized properties, and improve the cost effectiveness and efficiency of the federal real property portfolio. Agencies have developed and annually update five-year Real Property Efficiency Plans (Plans) to identify reductions to their portfolios over a five-year time-period. In FY 2016, agencies reduced their FY 2015 RTF baselines by 11.2 million square feet, resulting in an annual estimated cost avoidance of \$100 million. During the FY 2017 to FY 2021 timeframe, the agencies' Plans target a net office and warehouse reduction of 22.4 million square feet and a reduction of 49.4 million square feet in owned space. The magnitude of the reduction targets indicates that the Strategy and RTF policy will be effective tools to improve the efficiency of the

Government's real property portfolio. Agencies will update their Plans and annual reduction targets in March of 2018. Agencies will continue to validate square footage and operations and maintenance costs in their PARs or AFRs under RTF.

Efficiency will be further improved by OMB's implementation of the Federal Assets Sale and Transfer Act of 2016 (FASTA) and the Federal Property Management Reform Act of 2016 (FPMRA). The RTF Plans help the agencies identify projects appropriate for inclusion in the FASTA process. To date, OMB has met all of its responsibilities under FASTA and FPMRA by the required deadlines.

To support increased reduction targets, the General Services Administration and OMB have developed a new management tool within the Federal Real Property Profile (FRPP) database that enables agencies to fully analyze the efficiency of their portfolios and to collocate with other agencies. The new management tool uses real property performance metrics to measure the efficiency of agencies' portfolios and thereby enable the identification and prioritization of improvement opportunities. The management tool and the improved FRPP data quality resulting from the implementation of GSA's technical guidance issued in FY 2017 (to establish mandatory FRPP data validation and verification requirements), will enhance agencies' abilities to implement data driven decision making when developing their annual RTF reduction targets. Focusing policy on reducing the portfolio, improving the quality of FRPP data through mandatory data validation and verification procedures, and the broad use of the new FRPP management tool will support higher RTF square foot reduction targets and efficiency gains in future years.

Conclusion

The federal government has seen significant progress in financial management since the passage of the CFO Act more than 20 years ago; yet significant challenges remain. The issues that the federal government faces today require financial managers to move beyond the status quo and improve both the efficiency and effectiveness of financial management activities. The steps outlined above leverage the tools and capacities that are in place today, and refocus energies on critical and emerging priorities – cutting wasteful spending, improving the efficiency of our operations and information technology, and laying a foundation for improved data quality and collaboration.

Additional Information

This *Financial Report's* Appendix contains the names and websites of the significant Government entities included in the *Financial Report's* financial statements. Details about the information in this *Financial Report* can be found in these entities' financial statements included in their Performance and Accountability and Agency Financial Reports. This *Financial Report*, as well as those from previous years, is also available at the Treasury, OMB, and GAO websites at: <http://www.fiscal.treasury.gov/reports-statements/financial-report/>; <https://www.whitehouse.gov/omb/management/office-federal-financial-management/>; and <http://www.gao.gov/financial.html>, respectively. Other related Government publications include, but are not limited to the:

- *Budget of the United States Government*,
- *Treasury Bulletin*,
- *Monthly Treasury Statement of Receipts and Outlays of the United States Government*,
- *Monthly Statement of the Public Debt of the United States*,
- *Economic Report of the President*, and
- *Trustees' Reports for the Social Security and Medicare Programs*.

Limitations of the Financial Statements

The principal financial statements have been prepared to report the financial position and results of operations of the federal government; the financial condition and changes in financial condition of its social insurance programs; and the federal government's projected long-term trends in receipts, spending, and debt, pursuant to the requirements of 31 U.S.C. § 331(e)(1). These statements are in addition to the financial reports used to monitor and control budgetary resources that are prepared from the same books and records.

U.S. GOVERNMENT ACCOUNTABILITY OFFICE

441 G St. N.W.
Washington, DC 20548Comptroller General
of the United States

February 15, 2018

The President
The President of the Senate
The Speaker of the House of Representatives

To operate as effectively and efficiently as possible, Congress, the administration, and federal managers must have ready access to reliable and complete financial and performance information—both for individual federal entities and for the federal government as a whole. Our report on the U.S. government's consolidated financial statements for fiscal years 2017 and 2016 underscores that much work remains to improve federal financial management and that the federal government continues to face an unsustainable long-term fiscal path.

Our audit report on the U.S. government's consolidated financial statements is enclosed. In summary, we found the following:

- Certain material weaknesses¹ in internal control over financial reporting and other limitations on the scope of our work resulted in conditions that prevented us from expressing an opinion on the accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016.² About 38 percent of the federal government's reported total assets as of September 30, 2017, and approximately 20 percent of the federal government's reported net cost for fiscal year 2017 relate to significant federal entities that as of the date of our audit report, were unable to issue audited financial statements, were unable to receive audit opinions on the complete set of financial statements, or received a disclaimer of opinion on their fiscal year 2017 financial statements.³
- Significant uncertainties (discussed in Note 22 to the consolidated financial statements), primarily related to the achievement of projected reductions in Medicare cost growth, prevented us from

¹A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected, on a timely basis. A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis.

²The accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016, consist of the (1) Statements of Net Cost, (2) Statements of Operations and Changes in Net Position, (3) Reconciliations of Net Operating Cost and Budget Deficit, (4) Statements of Changes in Cash Balance from Budget and Other Activities, and (5) Balance Sheets, including the related notes to these financial statements. Most revenues are recorded on a modified cash basis.

³As of the date of this audit report, the audited fiscal year 2017 financial statements for the Department of Energy were not issued. The Department of Agriculture obtained an unmodified opinion on its consolidated balance sheet as of September 30, 2017, but its consolidated statement of net cost, consolidated statement of changes in net position, combined statement of budgetary resources, and the related notes for the fiscal year ended September 30, 2017, were not audited. The Department of Defense, the Department of Housing and Urban Development, and the Railroad Retirement Board each received a disclaimer of opinion on their respective fiscal year 2017 financial statements.

expressing an opinion on the sustainability financial statements,⁴ which consist of the 2017 and 2016 Statements of Long-Term Fiscal Projections;⁵ the 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance;⁶ and the 2017 and 2016 Statements of Changes in Social Insurance Amounts. About \$33.7 trillion, or 68.7 percent, of the reported total present value of future expenditures in excess of future revenue presented in the 2017 Statement of Social Insurance relates to Medicare programs reported in the Department of Health and Human Services' 2017 Statement of Social Insurance, which received a disclaimer of opinion. A material weakness in internal control also prevented us from expressing an opinion on the 2017 and 2016 Statements of Long-Term Fiscal Projections.

- Material weaknesses resulted in ineffective internal control over financial reporting for fiscal year 2017.
- Material weaknesses and other scope limitations discussed in our audit report limited tests of compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements for fiscal year 2017.

Overall, significant progress has been made in improving federal financial management since the enactment of key federal financial management reforms in the 1990s. With few exceptions, all of the 24 Chief Financial Officers Act of 1990 (CFO Act) agencies received unmodified ("clean") opinions on their respective entities' fiscal year 2017 financial statements, up from 6 CFO Act agencies that received clean audit opinions for fiscal year 1996. In addition, accounting and financial reporting standards have continued to evolve to provide greater transparency and accountability over the federal government's operations, financial condition, and fiscal outlook. Further, the preparation and audit of individual federal entities' financial statements have identified numerous deficiencies, leading to corrective actions to strengthen federal entities' internal controls, processes, and systems.

However, since the federal government began preparing consolidated financial statements over 20 years ago, three major impediments have continued to prevent us from rendering an opinion on the federal government's accrual-based consolidated financial statements over this period: (1) serious financial management problems at the Department of Defense (DOD) that have prevented its financial statements from being auditable, (2) the federal government's inability to adequately account for and reconcile intragovernmental activity and balances between federal entities, and (3) the federal government's ineffective process for preparing the consolidated financial statements.

⁴The sustainability financial statements are based on projections of future receipts and spending, while the accrual-based consolidated financial statements are based on historical information, including the federal government's assets, liabilities, revenue and net cost.

⁵The Statements of Long-Term Fiscal Projections for fiscal years 2017 and 2016 present, for all the activities of the federal government, the present value of projected receipts and non-interest spending under current policy without change, the relationship of these amounts to projected gross domestic product (GDP), and changes in the present value of projected receipts and non-interest spending from the prior year. The valuation date for the Statements of Long-Term Fiscal Projections is September 30.

⁶Statements of Social Insurance are presented for the current year and each of the 4 preceding years as required by U.S. generally accepted accounting principles. For the Statements of Social Insurance, the valuation date is January 1 for the Social Security and Medicare programs, October 1 for the Railroad Retirement program (January 1 for fiscal years 2013, 2014, and 2015), and September 30 for the Black Lung program.

Following years of unsuccessful financial improvement efforts at DOD and consistently being unable to receive an audit opinion on its financial statements, the DOD Comptroller established the Financial Improvement and Audit Readiness (FIAR) Directorate to develop, manage, and implement a strategic approach for addressing internal control weaknesses and for achieving auditability, and to integrate those efforts with other improvement activities, such as the department's business systems modernization efforts. Until recently, DOD's FIAR strategy and methodology focused on several priorities with an overall goal of having its department-wide financial statements audit ready by September 30, 2017.⁷ Because budgetary information is widely and regularly used for management, one of DOD's highest priorities was to improve its budgetary information and processes underlying its Statement of Budgetary Resources (SBR).

Because of difficulties in supporting beginning balances, DOD decided to limit the scope of the first-year SBR audits. Specifically, the scope of these initial SBR audits focused on current-year budget activity, which was reported on a Schedule of Budgetary Activity (SBA).⁸ This was intended to be an interim step toward achieving the audit of multiple-year budget activity required for an audit of the SBR. The Departments of the Army, Navy, and Air Force underwent their first SBA audits for fiscal year 2015. These DOD components' SBAs were again audited for fiscal year 2016 but with an expanded scope that included beginning balances carried over from fiscal year 2015. Independent public accountants (IPA) issued disclaimers of opinion for all three DOD components' SBAs for both of these fiscal years and identified material weaknesses in internal control at all three DOD components.⁹

For fiscal year 2017, the Army, Navy, and Air Force underwent differing levels of financial audits or examinations as noted in the following.

- The Army expanded its scope to a SBR audit for both its General Fund and Working Capital Fund. The Army also had line item examinations conducted for its General Equipment and Operating Materials and Supplies and an examination of the design of the internal controls over its system supporting the delivery of munitions inventory management services. The audits of the Army's General Fund and Working Capital Fund SBRs and the line item examinations resulted in disclaimers of opinion. The internal control examination concluded that internal controls were not suitably designed.
- The Air Force underwent another SBA audit for fiscal year 2017, which resulted in a disclaimer of opinion.
- The Navy had reviews of selected closing balances as of September 30, 2017, for its General Fund and Working Capital Fund Balance Sheets. The IPA reported on the detailed audit procedures performed and the respective observations for each of the significant line items, including numerous findings and recommendations to address them.

⁷Section 1003 of the National Defense Authorization Act for Fiscal Year 2010, Pub. L. No. 111-84, 123 Stat. 2190, 2439-41 (Oct. 28, 2009), made the development and maintenance of the FIAR Plan a statutory requirement. Under the act, the FIAR Plan must describe specific actions to be taken and the costs associated with ensuring that DOD's financial statements are validated as ready for audit by September 30, 2017. In addition, section 1005 of the National Defense Authorization Act for Fiscal Year 2013, Pub. L. No. 112-239, 126 Stat. 1632, 1904-05 (Jan. 2, 2013), enacted a requirement for DOD's FIAR Plan to describe specific actions to be taken and the costs associated with ensuring that one of DOD's financial statements, the Statement of Budgetary Resources, would be validated as ready for audit by September 30, 2014, but DOD has acknowledged that it did not meet this target date. Subsequently, section 1003 of the National Defense Authorization Act for Fiscal Year 2014, Pub. L. No. 113-66, 127 Stat. 672, 842 (Dec. 26, 2013) (*reprinted in* 10 U.S.C. § 2222 note), mandated an audit of DOD's fiscal year 2018 financial statements and that the audit results be submitted to Congress by March 31, 2019.

⁸Unlike the SBR, which reflects multiple-year budget activity, the SBA reflects the balances and associated activity related only to funding from fiscal year 2015 forward. As a result, the SBAs exclude unobligated and unexpended amounts carried over from funding prior to fiscal year 2015 as well as information on the status and use of such funding (e.g., obligations incurred and outlays) in fiscal year 2015 and thereafter.

⁹Disclaimer of opinion means that the auditors were unable to express an opinion because of a lack of sufficient evidence to support the amounts presented.

While DOD made some progress closing notices of findings and recommendations issued in prior years, the IPAs that performed the above-noted fiscal year 2017 financial audits or examinations issued or reissued hundreds of notices of findings and recommendations for corrective actions to address financial reporting and information system control deficiencies.

In its November 2017 FIAR Plan Status Report, DOD stated that it will undergo a DOD-wide consolidated financial statement audit for fiscal year 2018. As a result, the focus of DOD's strategy for achieving a clean opinion on its financial statements and improving overall financial management has shifted from preparing for audit readiness to undergoing a full financial statement audit and remediating audit findings. DOD stated that undergoing financial statement audits will be valuable for a number of reasons, including the following.

- Audits will provide management with independent validation and feedback on the effectiveness of DOD business systems, processes, and controls.
- Component managers will use audit information to identify root causes of deficiencies and prioritize remediation work.
- DOD leadership will be able to use root cause information to manage risk and make strategic decisions.
- Audits will ensure that DOD leadership has visibility over quantities, locations, and conditions of DOD property, which affects readiness, as well as programming and budgeting decisions.

DOD acknowledged that achieving a clean audit opinion will take time. However, it stated that over the next several years, the closure of audit findings will serve as an objective measure of progress toward that goal.

Various efforts are also under way to address the other two major impediments to an audit of the consolidated financial statements. For example, during fiscal year 2017, the Department of the Treasury (Treasury) continued to actively work with significant federal entities¹⁰ to resolve differences in intragovernmental activity and balances between federal entities through its quarterly scorecard process.¹¹ This process highlights differences requiring the entities' attention, identifies differences that need to be resolved through a formal dispute resolution process,¹² and reinforces the entities' responsibilities to resolve intragovernmental differences. Treasury also continues to develop and refine policies and procedures over accounting for and reporting all significant activity and balances of the General Fund of the U.S. Government (General Fund),¹³ and continues to improve its reconciliation process of the activity and balances between the General Fund and federal entity trading partners. Further, for the first time, Treasury will prepare and GAO will audit the Schedules of the General Fund, which will include activity and balances for fiscal year 2018. Over the past few years, Treasury's corrective actions have included implementing new systems for compiling the consolidated financial

¹⁰The Office of Management and Budget and Treasury have identified 39 federal entities that are significant to the U.S. government's fiscal year 2017 consolidated financial statements, including the 24 CFO Act agencies. See *Treasury Financial Manual*, vol. 1, pt. 2, ch. 4700, for a listing of the 39 entities.

¹¹For each quarter, Treasury produces a scorecard for each significant entity that reports various aspects of the entity's intragovernmental differences with its trading partners, including the composition of the differences by trading partner and category. Entities are expected to resolve, with their respective trading partners, the differences identified in their scorecards.

¹²When an entity and its respective trading partner cannot resolve an intragovernmental difference, the entity must request that Treasury resolve the dispute. Treasury will review the dispute and issue a decision on how to resolve the difference, which the entities must follow.

¹³The General Fund is a component of Treasury's central accounting function. It is a stand-alone reporting entity that comprises the activities fundamental to funding the federal government (e.g., issued budget authority, cash activity, and debt financing activities).

statements, improving guidance for collecting data from component entities, and implementing new or enhanced procedures to address certain internal control deficiencies detailed in our previously issued management report.¹⁴ In addition to continued leadership by Treasury and the Office of Management and Budget (OMB), strong and sustained commitment by federal entities is critical to fully address these issues.

The material weaknesses underlying these three major impediments have continued to (1) hamper the federal government's ability to reliably report a significant portion of its assets, liabilities, costs, and other related information; (2) affect the federal government's ability to reliably measure the full cost, as well as the financial and nonfinancial performance, of certain programs and activities; (3) impair the federal government's ability to adequately safeguard significant assets and properly record various transactions; and (4) hinder the federal government from having reliable financial information to operate in an efficient and effective manner. Over the years, we have made a number of recommendations to OMB, Treasury, and DOD to address these issues.¹⁵ These entities have taken or plan to take actions to address these recommendations.

In addition to the material weaknesses referred to above, we identified three other material weaknesses. These are the federal government's inability to (1) determine the full extent to which improper payments occur and reasonably assure that appropriate actions are taken to reduce them, (2) identify and resolve information security control deficiencies and manage information security risks on an ongoing basis, and (3) effectively manage its tax collection activities. Our audit report presents additional details concerning these material weaknesses and their effect on the accrual-based consolidated financial statements and on the management of federal government operations. Until the problems outlined in our audit report are adequately addressed, they will continue to have adverse implications for the federal government and American taxpayers.

Further, there are several issues that could impact the federal government's financial position and condition and its financial management in the future, including (1) financial and other risks, (2) the quality of spending data, and (3) the unsustainability of the federal government's fiscal path. Financial risk factors that could affect the federal government's financial condition in the future include the following.

- The Pension Benefit Guaranty Corporation's (PBGC) financial future is uncertain because of long-term challenges related to PBGC's governance and funding structure. PBGC's liabilities exceeded its assets by almost \$76 billion as of the end of fiscal year 2017—an increase of about \$40 billion from the end of fiscal year 2013. PBGC reported that it is subject to potential further losses of \$252 billion if plan terminations occur that are considered reasonably possible.
- In 2008, during the financial crisis, the federal government placed the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac) under conservatorship and entered into preferred stock purchase agreements with these government-sponsored enterprises (GSE) to help ensure their financial stability. The agreements with the GSEs could affect the federal government's financial position. At the end of fiscal year 2017, the federal government continued to report about \$93 billion of investments in the GSEs, which is net of about \$102 billion in valuation losses. The GSEs paid Treasury cash dividends of \$25.3 billion and \$11.5 billion during fiscal years 2017 and 2016, respectively. The reported maximum remaining contractual commitment to the GSEs, if needed, is \$258.1 billion. Importantly, the ultimate role of the GSEs in the mortgage market could affect the financial condition of the Federal Housing

¹⁴GAO, *Management Report: Improvements Needed in Controls over the Processes Used to Prepare the U.S. Consolidated Financial Statements*, GAO-17-524 (Washington, D.C.: July 12, 2017).

¹⁵See GAO-17-524. In addition, see GAO, *DOD Financial Management – High Risk Issue*, accessed February 9, 2018, http://www.gao.gov/key_issues/dod_financial_management/issue_summary/#t=1. Further, other auditors have made recommendations to DOD for improving its financial management.

Administration, which in the past expanded its lending role in distressed housing and mortgage markets.

- The U.S. Postal Service (USPS) continues to be in poor financial condition, with a reported net loss of \$2.7 billion in fiscal year 2017, its 11th consecutive year of net losses totaling \$65.1 billion over the period. USPS's business model continues to put it at risk of not being able to sufficiently fund its services and financial obligations.¹⁶
- We have reported that the Federal Emergency Management Agency (FEMA), which administers the National Flood Insurance Program, likely will not be able to repay its debt to Treasury from premiums collected from policyholders.¹⁷ FEMA owed \$30.4 billion as of the end of fiscal year 2017 to Treasury for money borrowed to pay claims and other expenses, including \$1.6 billion borrowed following a series of floods in 2016. In response to the disaster assistance needed as a result of the hurricane season in 2017, in October 2017, the Additional Supplemental Appropriations for Disaster Relief Requirements Act, 2017, among other things, canceled \$16 billion of FEMA's debt to Treasury for the National Flood Insurance Program.¹⁸

Every 2 years, GAO provides Congress with an update on its High-Risk Series, which highlights federal entities and program areas that are at high risk due to their vulnerabilities to fraud, waste, abuse, and mismanagement or are most in need of broad reform. We issued our most recently updated High-Risk Series on February 15, 2017.¹⁹ GAO's High-Risk Series includes most of the above-noted issues, such as DOD financial management, ensuring the security of federal information systems and cyber critical infrastructure and protecting the privacy of personally identifiable information, the PBGC insurance programs, modernizing the U.S. financial regulatory system and the federal role in housing finance, restructuring the USPS to achieve sustainable financial viability, and the National Flood Insurance Program.

The Digital Accountability and Transparency Act of 2014 (DATA Act) continues to hold great promise for improving the transparency and accountability of federal spending data by providing consistent, reliable, and complete data on federal spending, which will assist decision makers in addressing the federal government's fiscal challenges. Full implementation of the DATA Act will enable federal agencies to report information that complements the annual audited financial statements by providing much more detailed information on federal program spending and the activities of those programs. OMB and Treasury have taken significant steps toward implementing the DATA Act's various requirements and addressing our related recommendations.

In May 2017, more than 78 federal agencies, including all 24 CFO Act agencies, submitted their second quarter fiscal year 2017 data, as required by the DATA Act, reporting almost \$3 trillion in obligations. However, as we reported in November 2017,²⁰ there were issues and challenges with the completeness and accuracy of the data submitted, use of data elements, and presentation of the data on Beta.USAspending.gov. In order to fully and effectively implement the DATA Act, the federal

government will need to continue addressing complex policy and technical issues. These issues include clarifying compliance and reporting guidance and the disclosure of data quality issues on the website.

The 2017 Statement of Long-Term Fiscal Projections and related information in Note 23 and in the unaudited Required Supplementary Information section of the *Fiscal Year 2017 Financial Report of the United States Government (2017 Financial Report)* show that absent policy changes, the federal government continues to face an unsustainable long-term fiscal path. Over the long term, the imbalance between spending and revenue that is built into current law and policy is projected to lead to continued growth of the deficit and debt held by the public as a share of gross domestic product (GDP). This situation—in which debt grows faster than GDP—means the current federal fiscal path is unsustainable.²¹

GAO and the Congressional Budget Office (CBO) prepare long-term federal fiscal simulations, which also continue to show debt held by the public rising as a share of GDP in the long term.²² GAO, CBO, and the 2017 Statement of Long-Term Fiscal Projections all project that debt held by the public as a share of GDP will surpass its historical high (106 percent in 1946) within the next 14 to 22 years. The Tax Cuts and Jobs Act will hold important implications for this timeframe. Health care spending is a key programmatic and policy driver of the long-term outlook on the spending side of the budget. Eventually, however, spending on net interest is projected to become the largest category of spending in both the Statement of Long-Term Fiscal Projections and GAO's simulations.

All of these long-term projections each use somewhat different assumptions, but their results are the same; absent policy changes, the federal government's fiscal path is unsustainable. Reliable and complete financial information for federal entities will be needed for making policy changes that effectively address the unsustainable long-term fiscal path. GAO plans to issue an update to its report on the fiscal health of the federal government.²³

One cannot overstate the importance of preserving the confidence that investors have that debt backed by the full faith and credit of the United States will be honored. Failure to increase (or suspend) the debt limit in a timely manner could have serious negative consequences for the Treasury market and increase borrowing costs. Since December 9, 2017, Treasury had been taking extraordinary actions to continue funding government activities until the debt limit was addressed.²⁴ The Bipartisan Budget Act of 2018 temporarily suspended the debt limit from February 9, 2018, through March 1, 2019.²⁵

As we have previously reported, the debt limit does not restrict Congress's ability to enact spending and revenue legislation that affects the level of federal debt; nor does it otherwise constrain fiscal policy.

²¹The 2017 Statement of Long-Term Fiscal Projections is based on current policy as of September 30, 2017. Therefore, the 2017 projections, related footnotes, and Required Supplementary Information do not reflect the effects of the Tax Cuts and Jobs Act, Pub. L. No. 115-97, 131 Stat. 2054, enacted on December 22, 2017, or any other legislation enacted after September 30, 2017 that changes policy that was in effect as of the end of the fiscal year. Management notes that next year's 2018 Statement of Long-Term Fiscal Projections in the Financial Report will incorporate the effects of such legislation enacted after September 30, 2017, based on an updated economic forecast and other economic developments.

²²Similar to the 2017 Statement of Long-Term Fiscal Projections, GAO and CBO simulations also do not reflect the effects of the Tax Cuts and Jobs Act or other legislation enacted after September 30, 2017. For more information on GAO's simulations, see GAO, *The Nation's Fiscal Health: Action is Needed to Address the Federal Government's Fiscal Future*, GAO-17-237SP (Washington, D.C.: Jan. 17, 2017). For more information on CBO's simulations, see Congressional Budget Office, *The 2017 Long-Term Budget Outlook* (Washington, D.C.: March 2017).

²³GAO-17-237SP.

²⁴Actions that are not part of Treasury's normal cash and debt management operations are considered "extraordinary actions" by Treasury.

²⁵Section 30301 of Division C, "Temporary Extension of the Public Debt Limit," of the Bipartisan Budget Act of 2018, Pub. L. No. 115-123, div. C, tit. III, § 30301, 132 Stat. 64 (Feb. 9, 2018), temporarily suspended the statutory debt limit.

Rather, the debt limit is an after-the-fact measure; the spending and tax laws that result in debt have already been enacted. In other words, the debt limit restricts Treasury's authority to borrow to finance the decisions already enacted by Congress and the President.²⁶ U.S. Treasury securities play a vital role in the U.S. and global financial markets, to a great extent because of their large, liquid, and transparent market and because investors are confident that debt backed by the full faith and credit of the United States will be honored. Because Treasury securities are viewed as one of the safest assets in the world, they are broadly held by individuals—often in pension funds or mutual funds—and by institutions and central banks for use in everyday transactions.

Treasury securities serve as a close substitute for cash for financial institutions and corporate treasurers, are one of the cheapest and most widely used forms of collateral for financial transactions, and are the basis for pricing many financial products, such as corporate bonds, derivatives, and mortgages. In many ways, U.S. Treasury securities are the underpinning of the world financial system. As we have also previously reported, delays in raising the debt limit can create uncertainty in the Treasury market. To avoid such uncertainty and the disruption to the Treasury market that it creates, as well as to help inform the fiscal policy debate in a timely way, we have suggested that Congress should consider ways to better link decisions about the debt limit with decisions about spending and revenue at the time those decisions are made.²⁷

Our audit report on the U.S. government's consolidated financial statements would not be possible without the commitment and professionalism of inspectors general throughout the federal government who are responsible for annually auditing the financial statements of individual federal entities. We also appreciate the cooperation and assistance of Treasury and OMB officials as well as the federal entities' chief financial officers. We look forward to continuing to work with these individuals, the administration, and Congress to achieve the goals and objectives of federal financial management reform.

Our audit report begins on page 218. Our guide, *Understanding the Financial Report of the United States Government*, is intended to help those who seek to obtain a better understanding of the *Financial Report* and is available on GAO's website at <http://www.gao.gov>.²⁸ In addition, the website includes a guide to understanding the differences between accrual and generally cash-based budget measures and provides a useful perspective on the different purposes that cash and accrual measures serve in providing a comprehensive picture of the federal government's fiscal condition today and over time.²⁹

Financial Statements of the United States Government for the Fiscal Years Ended September 30, 2017, and 2016

The consolidated financial statements of the United States Government (Government) were prepared using U.S. Generally Accepted Accounting Principles (GAAP). The consolidated financial statements include the accrual-based financial statements and the sustainability financial statements, which are discussed in more detail below, and the related notes to the consolidated financial statements. Collectively, the accrual-based financial statements, the sustainability financial statements, and the notes represent basic information that is deemed essential for the consolidated financial statements to be presented in conformity with GAAP.

ACCRUAL-BASED FINANCIAL STATEMENTS

The accrual-based financial statements present historical information on what the federal government owns (assets) and owes (liabilities) at the end of the year, what came in (revenues) and what went out (net costs) during the year, and how accrual-based net operating costs of the federal government reconcile to the budget deficit and changes in its cash balance during the year. The following sections discuss each of the accrual-based financial statements.

Statements of Net Cost

These statements present the net cost of the Government operations for fiscal years 2017 and 2016, including the operations related to funds from dedicated collections. Costs and earned revenues are categorized on the Statement of Net Cost by significant entity, providing greater accountability by showing the relationship of the agencies' net cost to the governmentwide net cost. Costs and earned revenues are presented in this *Financial Report* on an accrual basis, while the budget presents outlays and receipts, generally on a cash basis. The focus of the budget of the United States is by agency. Budgets are prepared, defended, and monitored by agency. In reporting by agency, we are assisting the external users in assessing the budget integrity, operating performance, stewardship, and systems and controls of the Government.

The Statements of Net Cost contain the following four components:

- Gross cost—is the full cost of all the departments and entities excluding (gain)/loss from changes in assumptions. These costs are assigned on a cause-and-effect basis, or reasonably allocated to the corresponding entities.
- Earned revenue—is exchange revenue resulting from the Government providing goods and services to the public at a price.
- (Gain)/loss from changes in assumptions—is the gain or loss from changes in long-term assumptions used to measure the liabilities reported for federal civilian and military employee pensions, other post-employment benefits, and other retirement benefits, including veterans' compensation.
- Net cost—is computed by subtracting earned revenue from gross cost, adjusted by the (gain)/loss from changes in assumptions.

Individual agency net cost amounts will differ from the agency's financial statements primarily because of reallocations completed at the governmentwide level which are listed below.

- Benefit program costs.
- Intragovernmental eliminations, as adjusted for buy/sell costs and related revenues.
- Imputed costs.

Because of its specific function, most of the benefit program costs originally associated with the Office of Personnel Management (OPM) have been reallocated to the user agencies for governmentwide reporting purposes. The remaining costs for OPM on the Statements of Net Cost are the administrative operating costs, the expenses from prior costs from health and pension plan amendments, and the actuarial gains and losses, if applicable.

General Services Administration (GSA) is the primary provider of goods and services to federal agencies. GSA's net cost is adjusted for its intragovernmental buy/sell costs and related revenues. The remaining costs for GSA on the Statements of Net Cost are administrative operating costs. With regard to intragovernmental buy/sell costs and related revenues, the amounts recognized by each agency are added to, and subtracted from, respectively, the individual agency non-federal net cost amounts. In addition, the intragovernmental imputed costs recognized for the receipt of goods and services, financed in whole or part by the providing agencies, are added to the individual agency non-federal net cost amounts.

The interest on securities issued by the Department of the Treasury (Treasury) and held by the public is reported on Treasury's financial statements, but, because of its importance and the dollar amounts involved, it is reported separately in these statements.

Statements of Operations and Changes in Net Position

These statements report the results of Government operations, net operating costs, which include the results of operations for funds from dedicated collections. They include non-exchange revenues, which are generated from transactions that do not require a Government entity to give value directly in exchange for the inflow of resources. The Government does not "earn" the non-exchange revenue. These are generated principally by the Government's sovereign power to tax, levy duties, and assess fines and penalties. These statements also include the net cost reported in the Statements of Net Cost. They further include certain adjustments and unreconciled transactions that affect the net position.

Revenue

Inflows of resources to the government that the government demands or that it receives by donations are identified as non-exchange revenue. The inflows that it demands include individual income tax and tax withholdings, excise taxes, corporation income taxes, unemployment taxes, custom duties, and estate and gift taxes. The non-exchange revenue is recognized when collected and adjusted for the change in net measurable and legally collectable amounts receivable.

Individual income tax and tax withholdings include *Federal Insurance Contributions Act (FICA)/Self-Employment Contributions Act (SECA)* taxes and other taxes.

Excise taxes consist of taxes collected for various items, such as airline tickets, gasoline products, distilled spirits and imported liquor, tobacco, firearms, and other items.

Other taxes and receipts include Federal Reserve Banks (FRBs) earnings, tax related fines, penalties and interest, and railroad retirement taxes.

Miscellaneous earned revenues consist of earned revenues received from the public with virtually no associated cost. These revenues include rents and royalties on the Outer Continental Shelf Lands resulting from the leasing and development of mineral resources on public lands.

Generally, funds from dedicated collections are financed by specifically identified revenues, provided to the government by non-federal sources, often supplemented by other financing sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits or purposes, and must be accounted for separately from the Government's general revenue. See Note 20—Funds from Dedicated Collections for detailed information.

Intragovernmental interest represents interest earned from the investment of surplus dedicated collections, which finance the deficit spending of all other fund's non-dedicated operations. These investments are recorded as intragovernmental debt holdings and are included in Note 11—Federal Debt Securities Held by the Public and Accrued Interest, in the table titled Intragovernmental Debt Holdings: Federal Debt Securities Held as Investments by Government Accounts. These interest earnings and the associated investments are eliminated in the consolidation process.

Net Cost of Government Operations

The net cost of Government operations—gross cost (including gains/losses from changes in assumptions) less earned revenue—flows through from the Statements of Net Cost. The net cost and intragovernmental net cost associated with funds from dedicated collections activities are separately reported.

Intragovernmental Transfers

Intragovernmental transfers reflect budgetary and other financing sources for funds from dedicated collections, excluding financing sources related to non-exchange revenues, intragovernmental interest, and miscellaneous revenues. These intragovernmental transfers include appropriations, transfers, and other financing sources. These amounts are labeled as “other changes in fund balance” in Note 20—Funds from Dedicated Collections. Some transfers reflect amounts required by statute to be transferred from the General Fund of the U.S. Government (General Fund) to funds from dedicated collections. For Supplementary Medical Insurance (SMI), transfers from the General Fund financed 74 percent and 76 percent of 2017 program costs to Part B and D, respectively.

Unmatched Transactions and Balances

Unmatched transactions and balances are adjustments needed to bring the change in net position into balance due primarily to unreconciled intragovernmental differences. See Note 1.S—Unmatched Transactions and Balances for detailed information.

The unmatched transactions and balances are included in net operating cost to make the sum of net operating costs and prior period adjustments for the year equal to the change in the net position balance.

Net Operating Cost

The net operating cost equals revenue less net cost of Government operations (that flows from the Statement of Net Cost) adjusted by unmatched transactions and balances. See Note 1.S—Unmatched Transactions and Balances for detailed information.

Net Position, Beginning of Period

The net position, beginning of period, reflects the amount reported on the prior year’s balance sheet as of the end of that fiscal year. The net position for funds from dedicated collections is shown separately.

Prior-period adjustments are revisions to the beginning net position presented on the prior year financial statements due to corrections of material errors or certain changes in accounting principles. See Note 1.T—Prior-Period Adjustments for detailed information.

Net Position, End of Period

The net position, end of period, reflects the amount as of the end of the fiscal year. The net position for funds from dedicated collections is separately shown.

Reconciliations of Net Operating Cost and Budget Deficit

These statements reconcile the results of operations (net operating cost) on the Statements of Operations and Changes in Net Position (SOCNP) to the budget deficit. The premise of the reconciliation is that the accrual and budgetary accounting basis share transaction data.

Receipts and outlays in the budget are measured primarily on a cash basis and differ from the accrual basis of accounting used in the *Financial Report*. Refer to Note 1.B—Basis of Accounting and Revenue Recognition for details. These statements begin with the net results of operations (net operating cost) and report activities where the basis of accounting for the components of net operating cost and the budget deficit differ.

Some presentations of the budget deficit make the distinction between on-budget and off-budget totals. On-budget totals reflect the transactions of all Government entities, except those excluded from the budget by law. Off-budget totals reflect the transactions of Government entities that are excluded from the on-budget totals by law. Under current law, the off-budget totals include the Social Security trust funds and the Postal Service. The budget deficit, as presented in the *Financial Report*, combines the on-budget and off-budget totals to derive consolidated totals for federal activity.

Components of Net Operating Cost Not Part of the Budget Deficit

This information includes the operating components, such as the changes in benefits payable for veterans, military and civilian employees, environmental and disposal liabilities, and depreciation expense, not included in the budget results.

Components of the Budget Deficit Not Part of Net Operating Cost

This information includes the budget components, such as capitalized fixed assets (that are recorded as outlays in the budget when purchased and reflected in net operating cost through depreciation expense over the useful life of the asset) and increases in other assets that are not included in the operating results.

Statements of Changes in Cash Balance from Budget and Other Activities

The primary purpose of these statements is to report how the annual budget deficit relates to the change in the Government's cash and other monetary assets, as well as debt held by the public. It explains why the budget deficit normally would not result in an equivalent change in the Government's cash and other monetary assets.

These statements reconcile the budget deficit to the change in cash and other monetary assets during the fiscal year. They also serve to explain how the budget deficits were financed. A budget deficit is the result of outlays exceeding receipts during a particular fiscal year.

The budget deficit is primarily financed through borrowings from the public. Other transactions, such as the payment of interest on Treasury securities held by the public, also require cash disbursements and are not part of the deficit. Additionally, the budget deficit includes certain amounts that are recognized in the budget, but will be disbursed in a future period, or are adjustments that did not affect the cash balance. These amounts include interest accrued on Treasury securities held by the public, as well as subsidy expense related to direct and guaranteed loans.

These statements show the adjustments for non-cash outlays included in the budget, and items affecting the cash balance not included in the budget, to explain the change in cash and other monetary assets.

In fiscal year 2017, additional lines were included in the presentation of this statement to provide further breakdown of certain categories of transactions. This presentation change did not affect the fiscal year 2016 totals related to cash and other monetary assets balances.

Balance Sheets

The balance sheets show the Government's assets, liabilities, and net position. When combined with stewardship information, this information presents a more comprehensive understanding of the Government's financial position. The net position for funds from dedicated collections is shown separately.

Assets

Assets included on the balance sheets are resources of the Government that remain available to meet future needs. The most significant assets that are reported on the balance sheets are loans receivable, net; property, plant, and equipment (PP&E), net; inventories and related property, net; and cash and other monetary assets. There are, however, other significant

resources available to the Government that extend beyond the assets presented in these balance sheets. Those resources include Stewardship Land and Heritage Assets in addition to the Government's sovereign powers to tax and set monetary policy.

Liabilities and Net Position

Liabilities are obligations of the Government resulting from prior actions that will require financial resources. The most significant liabilities reported on the balance sheets are federal debt securities held by the public and accrued interest, and federal employee and veteran benefits payable. Liabilities also include environmental and disposal liabilities, benefits due and payable, as well as insurance and guarantee program liabilities.

As with reported assets, the Government's responsibilities, policy commitments, and contingencies are much broader than these reported balance sheet liabilities. They include the social insurance programs reported in the Statements of Social Insurance and disclosed in the Required Supplementary Information (RSI)—Social Insurance section, fiscal long-term projections of non-interest spending reported in the Statements of Long-Term Fiscal Projections, and a wide range of other programs under which the Government provides benefits and services to the people of this Nation, as well as certain future loss contingencies.

The Government has entered into contractual commitments requiring the future use of financial resources and has unresolved contingencies where existing conditions, situations, or circumstances create uncertainty about future losses. Contingencies and commitments that do not meet the criteria for recognition as liabilities on the balance sheets, but for which there is at least a reasonable possibility that losses have been incurred, are disclosed in Note 18—Contingencies and Note 19—Commitments.

The collection of certain taxes and other revenue is credited to the corresponding funds from dedicated collections that will use these funds to meet a particular Government purpose. If the collections from taxes and other sources exceed the payments to the beneficiaries, the excess revenue is invested in Treasury securities or deposited in the General Fund; therefore, the trust fund balances do not represent cash. An explanation of the trust funds for social insurance is included in Note 20—Funds from Dedicated Collections. That note also contains information about trust fund receipts, disbursements, and assets.

Due to its sovereign power to tax and borrow, and the country's wide economic base, the Government has unique access to financial resources through generating tax revenues and issuing federal debt securities. This provides the Government with the ability to meet present obligations and those that are anticipated from future operations, and are not reflected in net position.

The net position is the residual difference between assets and liabilities and is the cumulative results of operations since inception. For detailed components that comprise the net position, refer to the section "Statement of Operations and Changes in Net Position."

SUSTAINABILITY FINANCIAL STATEMENTS

The sustainability financial statements are comprised of the Statements of Long-Term Fiscal Projections, covering all federal government programs, and the Statements of Social Insurance and the Statement of Changes in Social Insurance Amounts, covering social insurance programs (Social Security, Medicare, Railroad Retirement, and Black Lung programs). The sustainability financial statements are designed to illustrate the relationship between projected receipts and expenditures if current policy is continued over a 75 year time horizon¹. For this purpose, the projections assume that scheduled social insurance benefit payments would continue after related trust funds are projected to be exhausted, contrary to current law, and that debt could continue to rise indefinitely without severe economic consequences. The sustainability financial statements are intended to help citizens understand current policy and the importance and magnitude of policy reforms necessary to make it sustainable.

By accounting convention, the Statements of Social Insurance do not include projected general revenues that, under current law, would be used to finance the remainder of the expenditures in excess of revenues for Medicare Parts B and D reported in the Statements of Social Insurance. The Statements of Long-Term Fiscal Projections include all revenues (including general revenues) of the federal government.

¹ With the exception of the Black Lung program, which has a rolling 25-year projection period through September 30, 2042.

Statements of Long-Term Fiscal Projections

The Statements of Long-Term Fiscal Projections are intended to assist readers of the Government's financial statements in assessing the financial condition of the federal government and how the Government's financial condition has changed (improved or deteriorated) during the year and may change in the future. They are also intended to assist readers in assessing whether future budgetary resources of the Government will likely be sufficient to sustain public services and to meet obligations as they come due, assuming that current policy for Federal Government public services and taxation is continued without change.

The Statements of Long-Term Fiscal Projections display the present value of 75-year projections by major category of the Federal Government's receipts and non-interest spending. These projections show the extent to which future receipts of the Government exceed or fall short of the Government's non-interest spending. The projections are presented both in terms of present value dollars and in terms of present value dollars as a percent of present value Gross Domestic Product (GDP). The projections are on the basis of policies currently in place and are neither forecasts nor predictions. These projections are consistent with the projections for Social Security and Medicare presented in the Statements of Social Insurance and are based on the same economic and demographic assumptions as underlie the Statements of Social Insurance. These statements also display the fiscal gap, which is a summary measure of the combination of non-interest spending reductions and receipt increases necessary to hold the ratio of debt held by the public to GDP at the end of the projection period to its value at the beginning of the period. Note 23—Long-Term Fiscal Projections, further explains the methods used to prepare these projections and provides additional information. Unaudited required supplementary information further assesses the sustainability of current fiscal policy and provides results based on alternative assumptions to those used in the basic statement.

As discussed further in Note 23, a sustainable policy is one where the ratio of debt held by the public to GDP (the debt-to-GDP ratio) is stable or declining over the long term. GDP measures the size of the Nation's economy in terms of the total value of all final goods and services that are produced in a year. Considering financial results relative to GDP is a useful indicator of the economy's capacity to sustain the Government's many programs.

Statements of Social Insurance and Changes in Social Insurance Amounts

The Statements of Social Insurance provide estimates of the status of the most significant social insurance programs: Social Security, Medicare, Railroad Retirement, and Black Lung². They are administered by the Social Security Administration (SSA), U.S. Department of Health and Human Services (HHS), the Railroad Retirement Board (RRB), and the Department of Labor (DOL), respectively. The estimates are actuarial present values³ of the projections and are based on the economic and demographic assumptions representing the trustees' reasonable estimates as set forth in the relevant Social Security and Medicare trustees' reports as well as in the agency financial reports of HHS, SSA, and DOL (Black Lung) and in the relevant agency performance and accountability report for the RRB. The SOSI projections, with one exception related to Medicare Part A and OASDI, are based on current law; that is, they assume that scheduled social insurance benefit payments would continue after related trust funds are projected to be depleted, contrary to current law. By law, once assets are exhausted, expenditures cannot be made except to the extent covered by ongoing tax receipts and other trust fund income.

The magnitude and complexity of social insurance programs, coupled with the extreme sensitivity of projections relating to the many assumptions of the programs, produce a wide range of possible results. In preparing the Statements of Social Insurance, Government management considers and selects assumptions and data that it believes provide a reasonable basis for the assertions in the statements. However, because of the large number of factors that affect the Statements of Social Insurance, plus the fact that such assumptions are inherently subject to substantial uncertainty (arising from the likelihood of future events, significant uncertainties, and contingencies), there will be differences between the estimates in the Statements of Social Insurance and the actual results, and those differences may be material. Note 22—Social Insurance describes the social insurance programs, reports long-range estimates that can be used to assess the financial condition of the programs,

² In relation to the amounts presented in the Statements of Social Insurance and Changes in Social Insurance Amounts, the combined Railroad Retirement and Black Lung programs account for less than a quarter of one percent of the statement totals, and therefore, are not material from the consolidated perspective.

³ Present values recognize that a dollar paid or collected in the future is worth less than a dollar today, because a dollar today could be invested and earn interest. To calculate a present value, future amounts are thus reduced using an assumed interest rate, and those reduced amounts are summed.

and explains some of the factors that impact the various programs. The Statements of Changes in Social Insurance Amounts reconcile the change between the current valuation period and the prior valuation period.

Fiscal gap⁵.....				(2.0)	(1.6)	(0.4)

¹75-year present value projections for 2017 are as of 9/30/2017 for the period FY 2018-2092; projections for 2016 are as of 9/30/2016 for the period FY 2017-2091.

²The 75-year present value of nominal Gross Domestic Product (GDP), which drives the calculations above is \$1,347.0 trillion starting in FY 2018, and was \$1,302.8 trillion starting in FY 2017.

³Represents portions of Medicare supported by payroll taxes.

⁴Represents portions of Medicare supported by general revenues. Consistent with the President's Budget, outlays for Parts B & D are presented net of premiums.

⁵To prevent the debt-to-GDP ratio from rising over the next 75 years, a combination of non-interest spending reductions and receipts increases that amounts to 2.0 percent of GDP on average is needed (1.6 percent of GDP on average in 2016). See Financial Statement Note 23.

Totals may not equal the sum of components due to rounding.

The accompanying notes are an integral part of these financial statements.

<i>Future participants:</i>					
Revenue (e.g., contributions and dedicated taxes)	43.3	41.9	36.8	34.3	32.9
Expenditures for scheduled future benefits	(24.0)	(23.7)	(20.1)	(19.6)	(18.6)
Present value of future revenue in excess of future expenditure	19.3	18.2	16.8	14.8	14.3
Open-group - Total present value of future expenditures in excess of future revenue	(49.0)	(46.7)	(41.5)	(41.9)	(39.7)

¹ The projection period for Social Security and Medicare is 1/1/2017-12/31/2091 and the valuation date is 1/1/2017.

² The projection period for Social Security and Medicare is 1/1/2016-12/31/2090 and the valuation date is 1/1/2016.

³ The projection period for Social Security and Medicare is 1/1/2015-12/31/2089 and the valuation date is 1/1/2015.

⁴ The projection period for Social Security and Medicare is 1/1/2014-12/31/2088 and the valuation date is 1/1/2014.

⁵ The projection period for Social Security and Medicare is 1/1/2013-12/31/2087 and the valuation date is 1/1/2013.

⁶ These amounts represent the present value of the future transfers from the General Fund to the Supplementary Medical Insurance Trust Fund. These future intragovernmental transfers are included as income in both HHS' and the Centers for Medicare & Medicaid Services' Financial Reports but are not income from the governmentwide perspective of this report.

⁷ Includes Railroad Retirement and Black Lung.

⁸ These amounts do not include the present value of the financial interchange between the railroad retirement and social security systems, which is included as income in the Railroad Retirement Financial Report, but is not included from the governmentwide perspective of this report. (See discussion of Railroad Retirement Program in the unaudited required supplementary information section of this report).

⁹ Does not include interest expense accruing on the outstanding debt of the Black Lung Disability Trust Fund.

¹⁰ For information on the projection periods and valuation dates for the Railroad Retirement and Black Lung programs, refer to the financial statements of RRB and DOL, respectively.

¹¹ Current participants for the Social Security and Medicare programs are assumed to be the "closed-group" of individuals who are at least 15 years of age at the start of the projection period, and are participating as either taxpayers, beneficiaries, or both.

Totals may not equal the sum of components due to rounding.

The accompanying notes are an integral part of these financial statements.

United States Government Notes to the Financial Statements for the Fiscal Years Ended September 30, 2017, and 2016

Note 1. Summary of Significant Accounting Policies

A. Reporting Entity

This *Financial Report* includes the financial status and activities of the executive branch, the legislative branch, and the judicial branch of the government. The financial reporting period ends September 30 and is the same as used for the annual budget. The legislative and judicial branches are not required by law to submit financial statement information to Treasury; however, these branches are included in the *Financial Report*. Appendix A of this report lists the organizations and agencies (entities) included in the U.S. Government's consolidated reporting entity for the *Financial Report*, as well as some entities not included in the reporting entity. Federal Accounting Standards Advisory Board's (FASAB) Statement of Federal Financial Accounting Concepts (SFFAC) 2, *Entity and Display*, provides criteria for determining which entities are included in the reporting entity. Such criteria are summarized in Appendix A. Also, as discussed further in Appendix A, certain entities are excluded from the *Financial Report* because they do not meet the criteria, such as Federal Home Loan Banks, or were specifically excluded from the consolidated reporting entity in accordance with SFFAC 2, such as the Board of Governors of the Federal Reserve System and bailout entities. Examples of bailout entities include the Federal Home Loan Mortgage Corporation (Freddie Mac) and Federal National Mortgage Association (Fannie Mae).

During fiscal year 2008, the government began a number of emergency economic measures relating to the economy that involved various financing programs. Key initiatives beginning in fiscal year 2008 involved programs concerning Fannie Mae and Freddie Mac (Government-Sponsored Enterprises [GSEs]), provision of a credit facility for GSEs and Federal Home Loan Banks, purchase of Mortgage-Backed Securities (MBSs), see Note 1.H—Investments in Government-Sponsored Enterprises and Note 8—Investments in Government-Sponsored Enterprises for detailed information.

Following GAAP for federal entities, the government has not consolidated into its financial statements the assets, liabilities, or results of operations of any financial organization or commercial entity in which Treasury holds either a direct, indirect, or beneficial equity investment. Even though some of the equity investments are significant, under SFFAC 2, these entities meet the criteria of paragraph 50 and do not appear in the federal budget section "Federal Programs by Agency and Account." As such, these entities are not consolidated into the financial reports of the government. However, the values of the investment in such entities are presented on the balance sheet.

Intragovernmental transactions are eliminated in consolidation, except as described in the Other Information—Unmatched Transactions and Balances, see Note 1.S—Unmatched Transactions and Balances for detailed information.

B. Basis of Accounting and Revenue Recognition

Consolidated Financial Statements

The consolidated financial statements of the government were prepared using GAAP, primarily based on FASAB's Statement of Federal Financial Accounting Standards (SFFAS). The consolidated financial statements include accrual-based financial statements and sustainability financial statements, which are discussed in more detail below, and the related notes to the consolidated financial statements. Collectively, the accrual-based financial statements, the sustainability financial statements, and the notes represent basic information that is deemed essential for the financial statements and notes to be presented in conformity with GAAP.

Accrual-Based Financial Statements

The accrual-based financial statements were prepared under the following principles:

- Expenses are generally recognized when incurred.
- Non-exchange revenue, including taxes, duties, fines, and penalties, are recognized when collected and adjusted for the change in net measurable and legally collectible amounts receivable. Related refunds and other offsets, including those that are measurable and legally payable, are netted against non-exchange revenue.
- Exchange (earned) revenue is recognized when the government provides goods and services to the public for a price. Exchange revenue includes user charges such as admission to federal parks and premiums for certain federal insurance.

The basis of accounting used for budgetary purposes, which is primarily on a cash basis (budget deficit) and follows budgetary concepts and policies, differs from the basis of accounting used for the financial statements which follow U.S. GAAP. See the Reconciliations of Net Operating Cost and Budget Deficit in the Financial Statements section.

Sustainability Financial Statements

The sustainability financial statements were prepared based on the projected present value of the estimated future revenue and estimated future expenditures, primarily on a cash basis, for a 75 year period¹. They include the Statements of Long-Term Fiscal Projections, covering all federal government programs, and the Statements of Social Insurance and the Statements of Changes in Social Insurance Amounts, covering social insurance programs (Social Security, Medicare, Railroad Retirement, and Black Lung programs). These estimates are based on economic as well as demographic assumptions presented in Notes 22 and 23. The sustainability financial statements are not forecasts or predictions. The sustainability financial statements are designed to illustrate the relationship between receipts and expenditures, if current policy is continued. For this purpose, the projections assume that scheduled social insurance benefit payments would continue after related trust funds are projected to be exhausted, contrary to current law, and that debt could continue to rise indefinitely without severe economic consequences.

By accounting convention, the Statements of Social Insurance do not include projected general revenues that, under current law, would be used to finance the remainder of the expenditures in excess of revenues for Medicare Parts B and D that is reported in the Statements of Social Insurance. The Statements of Long-Term Fiscal Projections include all revenues (including general revenues) of the federal government.

New Standards Issued in Prior Years and Implemented in Current Year

Beginning in fiscal year 2016, the government implemented the requirements of new standards related to the reporting for: Inventories and Related Property and Property, Plant, and Equipment. The standards being implemented are:

- FASAB issued SFFAS No. 48, *Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials*. SFFAS No. 48 permits a reporting entity to apply an alternative valuation method in establishing opening balances and applies when a reporting entity is presenting financial statements or one or more line items addressed by this statement. This method is permitted when presenting financial statements or one or more line items addressed in the standard. This standard can be applied for the first time or after a period during which existing systems could not provide the information necessary for producing GAAP-based financial statements without use of the alternative valuation methods. This is intended to provide an alternative method to adoption of GAAP when historical records and systems do not provide a basis for valuation of opening balances in accordance with SFFAS No. 3, *Accounting for Inventory and Related Property*. Reporting entities that meet either condition and elect to apply this statement should follow the guidance in SFFAS No. 21, *Reporting Corrections of Errors and Changes in Accounting Principles*. SFFAS No. 48 is effective beginning in fiscal year 2017. Early implementation was permitted. DOD did partially implement in 2016 and select component entities have continued to implement in 2017. DOD has not declared full implementation yet.
- FASAB issued SFFAS No. 50, *Establishing Opening Balances for General Property, Plant and Equipment*. SFFAS No. 50 permits a reporting entity to apply an alternative valuation method in establishing opening balances and applies when a reporting entity is presenting financial statements or one or more line items addressed by this statement. This standard can be applied for the first time or after a period during which existing systems could not provide the information necessary for producing GAAP-based financial statements without use of the alternative valuation methods. This is intended to provide an alternative method to adoption of GAAP when historical records and systems do not provide a basis for valuation of opening balance in accordance with SFFAS No. 6, *Accounting for Property, Plant, and Equipment*. This application is available to each reporting entity only once per line item

¹With the exception of the Black Lung program, which has a rolling 25-year projection period through September 30, 2042.

addressed in this statement. Reporting entities meeting the conditions and electing to apply this statement should follow the guidance in SFFAS No. 21, *Reporting Corrections of Errors and Changes in Accounting Principles*. SFFAS No. 50 is effective beginning in fiscal year 2017. Early implementation was permitted. DOD did partially implement in 2016 and select component entities have continued to implement in 2017. DOD has not declared full implementation yet.

New Standards Issued and Not Yet Implemented

FASAB issued the following new standards that are applicable to the *Financial Report*, but are not yet implemented at the governmentwide level for fiscal year 2017:

- In December 2014, FASAB issued SFFAS No. 47, *Reporting Entity*. SFFAS No. 47 establishes principles to identify organizations for which elected officials are accountable. The standard also guides preparers of general purpose federal financial reports in determining what organizations to report upon, whether such organizations are considered “consolidation entities” or “disclosure entities,” and what information should be presented about those organizations. An organization is considered a consolidation entity if, based on assessment of the following characteristics as a whole, the organization: is financed through taxes and other non-exchange revenues, is governed by the Congress and/or President, imposes or may impose risks and rewards to the federal government, and provides goods and services on a non-market basis. Organizations listed in the budget, except for non-federal organizations receiving federal assistance, would generally qualify as consolidation entities (Consolidation aggregates the individual financial statements of organizations that constitute a reporting entity and results in presentation of information for a single economic entity representing consolidated activities supported by taxes and other non-exchange revenue, resources, and obligations). A disclosure entity has a greater degree of autonomy with the federal government than a consolidation entity. To avoid obscuring information about these more autonomous organizations while still providing accountability, certain information for each disclosure entity (such as the nature of the federal government’s relationship to the disclosure entity, magnitude of relevant activity, and future exposure) and the aggregation of the disclosure entities are only going to be disclosed at the governmentwide level. The standard also requires information to be provided about related party relationships (organizations are considered related parties if one party has the ability to exercise significant influence over the other party in making policy decisions). SFFAS No. 47 is effective for periods beginning after September 30, 2017 and early implementation is not permitted.
- In April 2016, FASAB issued SFFAS No. 49, *Public-Private Partnerships Disclosure Requirements*. SFFAS No. 49 establishes principles to ensure disclosure about Public-Private Partnerships (P3s) are presented in the reporting entity’s general purpose federal financial reports (GPFRRs). P3s are defined as “risk sharing” arrangements or transactions lasting more than five years between public and private sector entities. Disclosure requirements comprise quantitative and qualitative information to assist users in understanding the nature of P3s. P3s disclosures help achieve the operating performance and budgetary integrity objectives outlined in SFFAC No. 1. P3s are a form of investments. They should be adequately disclosed in order to assist report users in determining: (a) the important assets of the U.S. government and how effectively they are being managed and (b) the identification of risks. SFFAS No. 49 is effective for periods beginning after September 30, 2018 and early implementation is permitted; however, it is not being early implemented in fiscal year 2017.
- In January 2017, FASAB issued SFFAS No. 51, *Insurance Programs*. SFFAS No. 51 establishes accounting and financial reporting standards to ensure that insurance programs are adequately defined and report consistent information about the liabilities for losses incurred and claimed as well as expected losses during remaining coverage. These will replace the insurance guarantee program standards provided in paragraphs 97-121 of SFFAS No. 5, *Accounting for Liabilities of the Federal Government*. To support consistency, it identifies three categories: 1) exchange transaction insurance programs other than life insurance, 2) nonexchange transaction insurance programs and 3) life insurance programs. Insurance programs are categorized based upon the type of revenue received as defined by SFFAS No. 7, *Accounting for Revenue and Other Financing and Concepts for Reconciling Budgetary and Financial Accounting*, as amended. This provides guidance as to how and when insurance programs should recognize revenue, expenses and liabilities according to the aforementioned categories. The recognition measurement, and disclosure guidance provides for concise, meaningful and transparent information regarding the operating performance of insurance programs. SFFAS No. 51 is effective for periods beginning after September 30, 2018 and early implementation is not permitted.
- In May 2017, FASAB issued SFFAS 52, *Tax Expenditures*. SFFAS No. 52 requires certain information on tax expenditures to assist users of the *Financial Report* in understanding the existence, purpose, and impact of tax expenditures. It requires that the *Financial Report* include narrative disclosures and information regarding tax expenditures, the general purpose of tax expenditures, the impact on and treatment of tax expenditures within the federal budget process, and the impact of tax expenditures on the government’s financial position and condition. It

also requires that the *Financial Report* alert readers regarding the availability of published information on tax expenditure estimates, such as those published annually by the Department of the Treasury's Office of Tax Policy. SFFAS No. 52 also encourages presentation of tax expenditures as other information (OI) in the *Financial Report*. SFFAS No. 52 is effective for periods beginning after September 30, 2017 and early implementation is permitted; however, it is not being early implemented.

C. Accounts and Taxes Receivable

Accounts receivable represent claims to cash or other assets from entities outside the government that arise from the sale of goods or services, duties, fines, certain license fees, recoveries, or other provisions of the law. Accounts receivable are reported net of an allowance for uncollectible amounts. An allowance is established when it is more likely than not the receivables will not be totally collected. The allowance method varies among the agencies in the government and is usually based on past collection experience and is re-estimated periodically as needed. Methods include statistical sampling of receivables, specific identification and intensive analysis of each case, aging methodologies, and percentage of total receivables based on historical collection.

Taxes receivable consist primarily of uncollected tax assessments, penalties, and interest when taxpayers have agreed or a court has determined the assessments are owed. Taxes receivable do not include unpaid assessments when taxpayers or a court have not agreed that the amounts are owed (compliance assessments) or the government does not expect further collections due to factors such as the taxpayer's death, bankruptcy, or insolvency (write-offs). Taxes receivable are reported net of an allowance for the estimated portion deemed to be uncollectible. The majority of the allowance for uncollectible amounts is based on projections of collectible amounts from a statistical sample of unpaid assessments.

D. Loans Receivable and Loan Guarantee Liabilities

Direct loans obligated and loan guarantees committed after fiscal year 1991 are reported based on the present value of the net cash flows estimated over the life of the loan or guarantee. The difference between the outstanding principal of the direct loans and the present value of their net cash inflows is recognized as a subsidy cost allowance. The present value of estimated net cash flows of the loan guarantees is recognized as a liability for loan guarantees.

The subsidy expense for direct or guaranteed loans disbursed during a fiscal year is the present value of estimated net cash flows for those loans or guarantees. A subsidy expense also is recognized for modifications made during the year to loans and guarantees outstanding and for re-estimates made as of the end of the fiscal year to the subsidy allowances or loan guarantee liability for loans and guarantees outstanding.

Direct loans obligated and loan guarantees committed before fiscal year 1992 are valued under two different methodologies within the government: the allowance-for-loss method and the present-value method. Under the allowance-for-loss method, the outstanding principal of direct loans is reduced by an allowance for uncollectible amounts; the liability for loan guarantees is the amount the agency estimates would more likely than not require future cash outflow to pay default claims. Under the present-value method, the outstanding principal of direct loans is reduced by an allowance equal to the difference between the outstanding principal and the present value of the expected net cash flows. The liability for loan guarantees is the present value of expected net cash outflows due to the loan guarantees.

E. Inventories and Related Property

Inventory is tangible personal property that is (1) held for sale, principally to federal agencies, (2) in the process of production for sale, or (3) to be consumed in the production of goods for sale or in the provision of services for a fee. SFFAS No. 3, *Accounting for Inventory and Related Property*, requires inventories held for sale and held in reserve for future sale within the government to be valued using either historical cost or a method that reasonably approximates historical cost. Historical cost methods include first-in-first-out, weighted average, and moving average. Any other valuation method may be used if the results reasonably approximate one of the historical cost methods. FASAB issued additional guidance SFFAS No. 48, which permits a reporting entity to apply an alternative valuation method in establishing opening balances for inventory, operating materials and supplies and stockpile materials and is intended to provide an alternative valuation method when historical records and systems do not provide a basis for valuation of opening balances in accordance with SFFAS No. 3.

DOD values approximately 98 percent of resale inventory using the moving average cost method. Additionally, DOD reports the remaining 2 percent of resale inventories at an approximation of historical cost using latest acquisition cost (LAC) adjusted for holding gains and losses. DOD continues to implement SFFAS No. 48. Some components within DOD used the deemed cost measures from this standard for fiscal year 2016; additional components used the deemed cost measure from the standard in fiscal year 2017 using a combination of standard price (selling price), latest acquisition cost, estimated historical cost, and historical cost as the basis for valuation.

Related property includes commodities, seized monetary instruments, forfeited and foreclosed property, raw materials and work in process. Operating materials and supplies are valued at historical cost or on a basis that reasonably approximates historical cost using the purchase and consumption method of accounting. Operating materials and supplies that are valued at latest acquisition cost and standard pricing are not adjusted for holding gains and losses.

F. Property, Plant, and Equipment

Property, Plant and Equipment (PP&E) consists of tangible assets including buildings, equipment, construction in progress, internal use software, assets acquired through capital leases (including leasehold improvements), and other assets used to provide goods and services.

SFFAS No. 6 requires general PP&E to be recorded at cost. Cost shall include all costs incurred to bring the PP&E to a form and location suitable for its intended use. PP&E used in government operations are carried at acquisition cost, with the exception of some DOD equipment. In some instances, DOD equipment is valued at estimated historical costs, which are calculated using internal DOD records. To establish a baseline, DOD accumulated information relating to program funding and associated equipment, equipment useful life, program acquisitions, as well as disposals. The equipment baseline is updated using expenditure information and information related to acquisitions and disposals. FASAB issued additional guidance, SFFAS No. 50, which permits a reporting entity to apply an alternative method to establish opening balances for general PP&E and is intended to provide an alternative valuation method when existing systems do not provide a basis for valuation of opening balances in accordance with SFFAS No. 6. During fiscal year 2016, select DOD components implemented this standard; additional components used the alternative valuation methods under the standard in fiscal year 2017 using historical records such as expenditure data, contracts, budget information, and engineering documentation as the method of valuation. SFFAS No. 50 also permits a reporting entity to apply an alternative method to establish opening balances for land and land rights which includes excluding land and land rights from the PP&E opening balance. If this method is applied, future land and land right acquisitions should be expensed. DOD has extensive efforts underway to change asset values to include the exclusion of land and land rights from opening balances in fiscal year 2018.

All PP&E is capitalized if the acquisition costs (or estimated acquisition cost for DOD) are in excess of capitalization thresholds that vary considerably between the federal entities. Depreciation and amortization expense applies to PP&E reported on the balance sheets except for land, unlimited duration land rights, and construction in progress. Depreciation and amortization are recognized using the straight-line method over the estimated useful lives of the assets. All PP&E are assigned useful lives depending on their category. The cost of acquisition, betterment, or reconstruction of all multi-use heritage assets is capitalized as general PP&E and is depreciated. Construction in progress is used for the accumulation of the cost of construction or major renovation of fixed assets during the construction period. The assets are transferred out of construction in progress when the project is substantially completed. Internal use software includes purchased commercial off-the-shelf software, contractor-developed software, and software internally developed.

For financial reporting purposes, other than multi-use heritage assets, stewardship assets are not recorded as part of PP&E. Stewardship assets consist of public domain land (stewardship land) and heritage assets. Examples of stewardship land include national parks, wildlife refuges, national forests, and other lands of national and historical significance. Heritage assets include national monuments, and historical sites that among other characteristics are of historical, natural, cultural, educational, or artistic significance. Stewardship land and most heritage assets are considered priceless and irreplaceable, and as such they are measured in physical units with no financial value assigned to them. Some heritage assets have been designated as multi-use heritage assets, for example the White House, the predominant use of which is in government operations. For more details on stewardship assets, see Note 24—Stewardship Land and Heritage Assets.

G. Debt and Equity Securities

Debt and equity securities are classified as held-to-maturity, available-for-sale, and trading. Held-to-maturity debt and equity securities are reported at amortized cost, net of unamortized premiums and discounts. Available-for-sale debt and equity securities are reported at fair value. Trading debt and equity securities are reported at fair value.

H. Investments in Government-Sponsored Enterprises

The senior preferred stock and associated common stock warrants in GSEs are presented at their fair value. The annual valuation to estimate the asset's fair value incorporates various forecasts, projections, and cash flow analyses. These valuations are performed on the senior preferred stock and warrants and any changes in valuation, including impairment, are recorded and disclosed in accordance with SFFAS No. 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, as amended. Since the valuation is an annual process, the changes in valuation of the senior preferred stock and warrants are deemed usual and recurring. Accordingly, changes in valuation are recorded as an exchange transaction which is either an expense or revenue. Since the costs of the senior preferred stock and warrants are reflected in exchange transactions, any change in valuation is also recorded as an exchange transaction.

The *Housing and Economic Recovery Act of 2008 (HERA)* established the Federal Housing Finance Agency (FHFA), which was created to enhance authority over the GSEs, and provide the Secretary of the Treasury with certain authorities to support the financial stability of the GSEs. In September 2008, Treasury entered into a Senior Preferred Stock Purchase Agreement (SPSPA) with each GSE. The GSEs were placed under conservatorship and require that Treasury increase their investment in the GSEs' senior preferred stock if, at the end of any quarter, the FHFA, acting as the conservator, determines that the liabilities of either GSE exceed its respective assets. The potential liabilities to the GSEs, if any, are assessed annually and recorded at the gross estimated amount. For more detailed information on investments in GSEs, refer to Note 8—Investments in Government-Sponsored Enterprises.

I. Federal Debt

Accrued interest on Treasury securities held by the public is recorded as an expense when incurred, instead of when paid. Certain Treasury securities are issued at a discount or premium. These discounts and premiums are amortized over the term of the security using an interest method for all long-term securities and the straight line method for short-term securities. Treasury also issues Treasury Inflation-Protected Securities (TIPS). The principal for TIPS is adjusted daily over the life of the security based on the Consumer Price Index for all Urban Consumers (CPI-U).

J. Federal Employee and Veteran Benefits Payable

Generally, federal employee and veteran benefits payable are recorded during the time employee services are rendered. The related liabilities for defined benefit pension plans, veterans' compensation, burial and education benefits, post-retirement health benefits, and post-retirement life insurance benefits, are recorded at estimated present value of future benefits, less any estimated present value of future normal cost contributions. Normal cost is the portion of the actuarial present value of projected benefits allocated as an expense for employee services rendered in the current year. Actuarial gains and losses (as well as prior service cost, if any) are recognized immediately in the year they occur without amortization.

The Department of Veterans Affairs (VA) also provides certain veterans and/or their dependents with pension benefits, based on annual eligibility reviews, if the veteran died or was disabled for nonservice-related causes. The actuarial present value of the future liability for these VA pension benefits is a non-exchange transaction and is not required to be recorded on the Balance Sheet. These benefits are expenses when benefits are paid rather than when employee services are rendered.

The liabilities for Federal Employees' Compensation Act (workers compensation) benefits are recorded at estimated present value of future benefits for injuries and deaths that have already been incurred.

Gains and losses from changes in long-term assumptions used to estimate federal employee pensions, Other Retirement Benefits (ORB), and Other Postemployment Benefits (OPEB) liabilities are reflected separately on the Statement of Net Cost

and the components of the expense related to federal employee pension, ORB, and OPEB liabilities are disclosed in Note 12—Federal Employee and Veteran Benefits Payable as prescribed by SFFAS No. 33, *Pensions, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates*. In addition, SFFAS No. 33 also provides a standard for selecting the discount rate assumption for present value estimates of federal employee pension, ORB, and OPEB liabilities.

K. Environmental and Disposal Liabilities

Environmental and disposal liabilities are recorded at the estimated current cost of removing, containing, treating, and/or disposing of radioactive waste, hazardous waste, chemical and nuclear weapons, as well as other environmental contaminations (including asbestos), assuming the use of current technology. Hazardous waste is a solid, liquid, or gaseous waste that, because of its quantity or concentration, presents a potential hazard to human health or the environment. Remediation consists of removal, decontamination, decommissioning, site restoration, site monitoring, closure as well as post-closure cost, treatment, and/or safe containment. Where technology does not exist to clean up radioactive or hazardous waste, only the estimable portion of the liability (typically monitoring and safe containment) is recorded.

L. Insurance and Guarantee Program Liabilities

Insurance and guarantee programs (such as Federal Crop Insurance Program and Benefit Pension Plans Program) provide protection to individuals or entities against specified risks except for those specifically covered by federal employee and veteran benefits, social insurance, and loan guarantee programs. Insurance and guarantee program funds are commonly held in revolving funds in the government and losses sustained by participants are paid from these funds. Many of these programs receive appropriations to pay excess claims and/or have authority to borrow from the Treasury. The values of insurance and guarantee program liabilities are particularly sensitive to changes in underlying estimates and assumptions. Insurance and guarantee programs with recognized liabilities in future periods (i.e., liabilities that extend beyond one year) are reported at their actuarial present value.

M. Deferred Maintenance and Repairs

Deferred maintenance and repairs are maintenance and repairs that were not performed when they should have been or scheduled maintenance and repairs that were delayed or postponed. Maintenance is the act of keeping fixed assets in acceptable condition, including preventative maintenance, normal repairs, and other activities needed to preserve the assets, so they continue to provide acceptable service and achieve their expected life. Maintenance and repairs exclude activities aimed at expanding the capacity of assets or otherwise upgrading them to serve needs different from those originally intended. Deferred maintenance and repairs expenses are not accrued in the Statements of Net Cost or recognized as liabilities on the Balance Sheet. However, deferred maintenance and repairs information is disclosed in the unaudited RSI section of this report. Please see unaudited RSI, Deferred Maintenance & Repairs for additional information including measurement methods.

N. Contingencies

Liabilities for contingencies are recognized on the Balance Sheet when both:

- A past transaction or event has occurred, and
- A future outflow or other sacrifice of resources is probable and measurable.

The estimated contingent liability may be a specific amount or a range of amounts. If some amount within the range is a better estimate than any other amount within the range, then that amount is recognized. If no amount within the range is a better estimate than any other amount, then the minimum amount in the range is recognized and the range is disclosed.

Contingent liabilities that do not meet the above criteria for recognition, but for which there is at least a reasonable possibility that a loss may be incurred, are disclosed in Note 18—Contingencies.

O. Commitments

In the normal course of business, the government has a number of unfulfilled commitments that may require the use of its financial resources. Note 19—Commitments describes the components of the government’s actual commitments that are disclosed due to their nature and/or their amount. They include long-term leases, undelivered orders, and other commitments.

P. Social Insurance

A liability for social insurance programs (Social Security, Medicare, Railroad Retirement, Black Lung, and Unemployment) is recognized for any unpaid amounts currently due and payable to beneficiaries or service providers as of the reporting date. No liability is recognized for future benefit payments not yet due. For further information, see Note 22—Social Insurance and the unaudited RSI—Social Insurance section.

Q. Funds from Dedicated Collections

Generally, funds from dedicated collections are financed by specifically identified revenues, provided to the government by non-federal sources, often supplemented by other financing sources that remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits, or purposes, and must be accounted for separately from the government’s general revenues. The three required criteria for a fund from dedicated collections are:

- A statute committing the government to use specifically identified revenues and/or other financing sources that are originally provided to the government by a non-federal source only for designated activities, benefits, or purposes;
- Explicit authority for the fund to retain revenues and/or other financing sources not used in the current period for future use to finance the designated activities, benefits, or purposes; and
- A requirement to account for and report on the receipt, use, and retention of the revenues and/or other financing sources that distinguishes the fund from the government’s general revenues.

For more details on funds from dedicated collections, see Note 20—Funds from Dedicated Collections.

R. Related Party Transactions

Federal Reserve System

The Federal Reserve System (FR System) was created by Congress under the *Federal Reserve Act of 1913*. The FR System consists of the Federal Reserve Board of Governors (Board), the Federal Open Market Committee (FOMC), and the Federal Reserve Banks (FRBs). Collectively, the FR System serves as the nation’s central bank and is responsible for formulating and conducting monetary policy, issuing and distributing currency (Federal Reserve Notes), supervising and regulating financial institutions, providing nationwide payment systems (including large-dollar transfers of funds, Automated Clearing House (ACH) operations, and check collection), providing certain financial services to federal agencies and fiscal principals, and serving as the U.S. government’s bank. Monetary policy includes actions undertaken by the FR System that influence the availability and cost of money and credit as a means of helping to promote national economic goals. The FR System also conducts operations in foreign markets in order to counter disorderly conditions in exchange markets or to meet other needs specified by the FOMC to carry out its central bank responsibilities. The FR System is not included in the federal budget. It is considered an independent central bank, and its decisions are not ratified by the executive branch of the federal government.

The government interacts with the FRBs in a variety of ways, including the following:

- The FRBs serve as the government’s fiscal agent and depository, executing banking and other financial transactions on the government’s behalf. The government reimburses the FRBs for these services, the cost of which is included on the Statements of Net Cost;
- The FRBs hold Treasury and other federal securities in the FRBs’ System Open Market Account (SOMA) for the purpose of conducting monetary policy (Note 11—Federal Debt Securities Held by the Public and Accrued Interest);

- The FRBs hold gold certificates issued by the government in which the certificates are collateralized by gold (Note 2—Cash and Other Monetary Assets);
- The FRBs hold Special Drawing Rights (SDR) certificates issued by the government which are collateralized by SDRs (see Note 2—Cash and Other Monetary Assets); and,
- The FRBs are required by Board policy to transfer their excess earnings to the government, which are included in Other Taxes and Receipts on the Statements of Operations and Changes in Net Position.

The government also consults with the FR System on matters affecting the economy and certain financial stabilization activities (Note 4—Loans Receivable and Loan Guarantee Liabilities, Net). The above financial activities involving the government are accounted for and disclosed in the government consolidated financial statements. In accordance with SFFAC No. 2, *Entity and Display*, the FR System's assets, liabilities, and operations are not consolidated into the government's financial statements, and are, therefore, not a part of the reporting entity.

Federal Reserve System Structure

The Board is an independent organization governed by seven members who are appointed by the President and confirmed by the Senate. The full term of a Board member is 14 years, and the appointments are staggered so that one term expires on January 31 of each even-numbered year. The Board has a number of supervisory and regulatory responsibilities for institutions including, among others, state-chartered banks that are members of the FR System, bank holding companies, and savings and loan holding companies. In addition, the Board has general supervisory responsibilities for the 12 FRBs, and issues currency (Federal Reserve Notes) to the FRBs for distribution.

The FOMC is comprised of the seven Board members and five of the 12 FRB presidents, and is charged with formulating and conducting monetary policy primarily through open market operations (the purchase and sale of certain securities in the open market), the principal tool of national monetary policy. These operations affect the amount of reserve balances available to depository institutions, thereby influencing overall monetary and credit conditions. The 12 FRBs are chartered under the *Federal Reserve Act*, which requires each member bank to own the capital stock of its FRB. Supervision and control of each FRB is exercised by a board of directors, of which three are appointed by the Board of Governors of the FR System, and six are elected by their member banks.

The FRBs participate in formulating and conducting monetary policy, distribute currency and coin, and serve as fiscal agents for the government, other federal agencies, and fiscal principals. Additionally, the FRBs provide short-term loans to depository institutions and loans to participants in programs or facilities with broad-based eligibility in unusual and exigent circumstances when approved by the Board and the Treasury Secretary.

Federal Reserve System Assets and Liabilities

The FRBs hold Treasury and other securities in the SOMA for the purpose of conducting monetary policy. Treasury securities held by the FRBs totaled \$1,964.7 billion and \$1,750.2 billion at September 30, 2017 and 2016, respectively (Note 11—Federal Debt Securities Held by the Public and Accrued Interest). These assets are generally subject to the same market (principally interest-rate) and credit risks as other financial instruments. In the open market, the FR System purchases and sells Treasury securities as a mechanism for controlling the money supply.

The FRBs have deposit liabilities with Treasury and depository institutions. The FRBs issue Federal Reserve Notes, the circulating currency of the United States, which are collateralized by the Treasury securities and other assets held by the FRBs. Financial and other information concerning the FR System, including financial statements for the Board and the FRBs, may be obtained at <https://www.federalreserve.gov>.

FRB Residual Earnings Transferred to the Government

FRBs generate income from interest earned on securities, reimbursable services provided to federal agencies, and the provision of priced services to depository institutions, as specified by the *Monetary Control Act of 1980*. Although the FRBs generate earnings from carrying out open market operations (via the earnings on securities held in the SOMA account), their execution of these operations is for the purpose of accomplishing monetary policy rather than generating earnings. Each FRB is required by Board policy to transfer to the government its residual (or excess) earnings, after providing for the cost of operations, payment of dividends, and surplus funds not to exceed an FRB's allocated portion of an aggregate of \$10 billion for all FRBs. This is in accordance with the provisions of a new statute, *Fixing America's Surface Transportation Act of 2015* (P.L. 114-94). These residual earnings may vary due to, among other things, changes in the SOMA balance levels that may occur in conducting monetary policy. Under P.L. 114-94, if an FRB's earnings for the year are not sufficient to provide for the cost of operations, payment of dividends, or allocated portion of \$10 billion aggregate surplus funds limitation, an FRB will suspend its payments to the government until such earnings become sufficient. The FRB residual earnings of \$81.3 billion and \$115.7 billion for fiscal years ended September 30, 2017 and 2016, respectively, are reported as other taxes and receipts on the Statements of Operations and Changes in Net Position. Accounts and taxes receivables, net, includes a

receivable for FRB's residual earnings which represents the earnings due to the General Fund as of September 30, but not collected by the General Fund until after the end of the month. As of September 30, 2017 and 2016, interest receivable on FRB's residual earnings are \$0.3 billion and \$0.4 billion, respectively (Note 3—Accounts and Taxes Receivables, Net).

Other Related Parties

The federal government, through the FHFA is the conservator for Fannie Mae and Freddie Mac. See Note 8—Investments in Government-Sponsored Enterprises.

The Secretary of Transportation has possession of two long term notes with the National Railroad Passenger Service Corporation (more commonly referred to as Amtrak). The first note is for \$4 billion and matures in 2975 and the second note is for \$1.1 billion and matures in 2082 with renewable 99 year terms. Interest is not accruing on these notes as long as the current financial structure of Amtrak remains unchanged. If the financial structure of Amtrak changes, both principal and accrued interest are due and payable. The Department of Transportation (DOT) does not record the notes in its financial statements since the notes, with maturity dates of 2975 and 2082, are considered fully uncollectible due to the lengthy terms and Amtrak's history of operating losses.

In addition, DOT has possession of all the preferred stock shares (109.4 million) of Amtrak. Congress, through DOT, has continued to fund Amtrak since approximately 1972; originally through grants, then, beginning in 1981, through the purchase of preferred stock, and then through grants again after 1997. The *Amtrak Reform and Accountability Act of 1997* changed the structure of the preferred stock by rescinding the voting rights with respect to the election of the Board of Directors and by eliminating the preferred stock's liquidation preference over the common stock. The Act also eliminated further issuance to DOT of preferred stock. DOT does not record the Amtrak preferred stock in its financial statements because, under the Corporation's current financial structure, the preferred shares do not have a liquidation preference over the common shares, the preferred shares do not have any voting rights, and dividends are neither declared nor in arrears.

In general, Amtrak is not a department, agency, or instrumentality of the government or DOT. Of the 10 members of Amtrak's Board of Directors, eight are appointed by the President and are subject to confirmation by the United States Senate. Once appointed, board members, as a whole, act independently without the consent of the government or any of its officers to set Amtrak policy, determine its budget, and decide operational issues. The Secretary of Transportation and the President of Amtrak (a nonvoting member) are statutorily appointed to the 10 member board. Traditionally, the Secretary of Transportation has designated the FRA Administrator to represent the Secretary at Board meetings.

The Export-Import Bank of the United States (Ex-Im Bank) has contractual agreements with the Private Export Funding Corporation (PEFCO). PEFCO, which is owned by a consortium of private-sector banks, industrial companies, and financial services institutions, makes and purchases from private sector lenders, medium-term and long-term fixed-rate and variable-rate loans guaranteed by Ex-Im Bank to foreign borrowers to purchase U.S. made equipment "export loans".

Ex-Im Bank's credit and guarantee agreement with PEFCO provides that Ex-Im Bank will guarantee the due and punctual payment of interest on PEFCO's secured debt obligations which Ex-Im Bank has approved, and grants to Ex-Im Bank a broad measure of supervision over PEFCO's major financial management decisions, including entitlement to have representatives and attend and participate in all meetings of PEFCO's board of directors, advisory board, and exporters' council, and to review PEFCO's financials and other records. This agreement extends through December 31, 2020.

The contractual agreements provide that Ex-Im Bank will (1) guarantee the due and punctual payment of principal, as well as interest on export loans made by PEFCO and (2) guarantee the due and punctual payment of interest on PEFCO's long-term secured debt obligations when requested by PEFCO. Related to the amounts for Ex-Im Bank as shown in Note 4—Loans Receivable and Loan Guarantee Liabilities, Net, these guarantees to PEFCO, aggregating \$6.4 billion and \$5.7 billion at September 30, 2017, and 2016, respectively, are included within the principal amounts guaranteed by the United States. The estimated losses related to these transactions is included within the guaranteed loan liability. Ex-Im Bank received fees for the agreements totaling \$0.07 billion and \$0.05 billion for fiscal years 2017 and 2016, respectively, which are included as earned revenue on the Statements of Net Cost.

S. Unmatched Transactions and Balances

The reconciliation of the change in net position requires that the difference between ending and beginning net position equals the difference between revenue and cost, plus or minus prior-period adjustments.

The unmatched transactions and balances are needed to bring the change in net position into balance. The primary factors affecting this out of balance situation are:

- Unmatched intragovernmental transactions and balances between federal agencies; and
- Errors and restatements in federal agencies' reporting.

As intragovernmental transactions and balances reduce to immaterial amounts, the corresponding individual lines in the Unmatched Transactions and Balances table are adjusted to remove the differences for the fiscal year. Please refer to the table of Unmatched Transactions and Balances in Other Information (Unaudited) for examples of the individual lines. Materiality for these adjustments is considered in the absolute value, when at or below \$0.1 billion.

Refer to the Other Information (unaudited)—Unmatched Transactions and Balances for detailed information.

T. Prior-Period Adjustments

During fiscal years 2016 and 2017, the Pension Benefit Guaranty Corporation (PBGC) and DOD reported prior period adjustments impacting the financial statements. DOD reported an increase of over \$37 billion and a \$1.5 billion decrease in fiscal year 2017 and 2016, respectively, to beginning net position due to implementation of SFFAS No. 48, *Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials* and SFFAS No. 50 *Establishing Opening Balances for General Property, Plant and Equipment*. DOD adopted SFFAS No. 48 for stockpile materials for selected components, which is reported in Inventories and Related Property. In addition, DOD adopted SFFAS No. 50 for PP&E for selected components, which is reported in PP&E.

In fiscal year 2016, PBGC's trust fund was reported as a fiduciary activity. During fiscal year 2017, the trust fund was reassessed for fiduciary fund reporting in the *Financial Report*. Based on the reassessment of the guidance within the federal accounting standards and the guidance provided by the establishment of PBGC under the Employee Retirement Income Security Act (ERISA), as amended, and the U.S. Code it was determined that PBGC's trust fund assets and liabilities should be consolidated in the financial statements and not reported as fiduciary activity in the notes. As a result the prior year financial statements were restated thus reversing the change in accounting principle of an increase of \$0.1 billion to net position previously reported in fiscal year 2016.

Note 20—Funds from Dedicated Collections included \$0.2 billion in prior-period adjustments for Gulf Coast Ecosystem Restoration Council and Department of Housing and Urban Development for fiscal year 2017.

U. Reclassifications

The Railroad Retirement and Black Lung programs are combined on the Statements of Social Insurance (SOSI) in 2016. In previous years, these programs were broken out and displayed separately.

In fiscal year 2017, additional lines were included in the presentation of the Statement of Changes in Cash Balance from Budget and Other Activities to provide a further breakdown of certain categories of transactions.

A review was done to enhance the format and readability of the *Financial Report* leading to consolidation of immaterial lines within tables and removal of information not required by FASAB.

V. Restatements

In fiscal year 2017, the assets and liabilities of PBGC were reassessed for reporting purposes. In fiscal year 2016 PBGC's revolving fund was consolidated in the financial statements and the trust fund was reported as fiduciary activity in the notes. For fiscal year 2017, both funds were consolidated in the financial statements. This change resulted in a correction of errors for the prior fiscal year 2016 financial statements which is reported as a restatement of the amounts on the Balance Sheet, Statement of Net Cost, Statement of Operations and Changes in Net Position, Reconciliations of Net Operating Cost and Budget Deficit, Statements of Changes in Cash Balance from Budget and Other Activities, Note 2—Cash and Other Monetary Assets (\$3.3 billion increase), Note 3—Accounts and Taxes Receivable (\$0.1 billion decrease), Net, Note 7—Debt and Equity Securities (\$60.0 billion increase), Note 9—Other Assets (\$1.1 billion increase), Note 15—Insurance and Guarantee Program Liabilities (\$64.7 billion increase), and Note 16—Other Liabilities (\$4.0 billion increase).

In fiscal year 2017, errors were noted in the presentation of Federal Housing Administration's (FHA) fiscal year 2016 Note 4—Loans Receivable and Loan Guarantee Liabilities, Net that required correction of balances reported in fiscal year 2017. The corrections resulted in the restatement of the prior year amounts for FHA's principal amount of loans under guarantee (\$2.9 billion increase), principal amount guaranteed by the United States (\$2.5 billion increase), and subsidy expense (income) for the fiscal year (\$8.1 billion increase).

W. Fiduciary Activities

Fiduciary activities are the collection or receipt, as well as the management, protection, accounting, investment and disposition by the government of cash or other assets in which non-federal individuals or entities have an ownership interest that the government must uphold. Fiduciary cash and other fiduciary assets are not assets of the government and are not recognized on the Balance Sheet. See Note 21—Fiduciary Activities, for further information.

X. Use of Estimates

The government has made certain estimates and assumptions relating to the reporting of assets, liabilities, revenues, expenses, and the disclosure of contingent liabilities to prepare these financial statements. There are a large number of factors that affect these assumptions and estimates, which are inherently subject to substantial uncertainty arising from the likelihood of future changes in general economic, regulatory, and market conditions. As such, actual results will differ from these estimates and such differences may be material.

Significant transactions subject to estimates include loans and credit program receivables, federal employee and veteran benefits payable, credit reform subsidy costs, investments in GSEs, and other non-federal securities and related impairment, tax receivables, loan guarantees, depreciation, imputed costs, other actuarial liabilities, cost and earned revenue allocations, as well as contingencies and any related recognized liabilities.

The government recognizes the sensitivity of credit reform modeling to slight changes in some model assumptions and uses regular review of model factors, statistical modeling, and annual re-estimates to reflect the most accurate cost of the credit programs to the U.S. Government. *Federal Credit Reform Act of 1990* (FCRA) loan receivables and loan guarantees are disclosed in Note 4—Loans Receivable and Loan Guarantee Liabilities, Net.

The forecasted future cash flows used to determine credit reform amounts are sensitive to slight changes in model assumptions, such as general economic conditions, specific stock price volatility of the entities in which the government has an equity interest, estimates of expected default, and prepayment rates. Therefore, forecasts of future financial results have inherent uncertainty.

The annual valuation performed as of September 30 on the preferred stock and warrants comprising the Investments in GSEs line item on the Balance Sheets incorporates various forecasts, projections, and cash flow analyses to develop an estimate of the asset's fair value. The value of the senior preferred stock is estimated by first estimating the fair value of the total equity of each GSE (which, in addition to the senior preferred stock, is comprised of other equity instruments including common stock, common stock warrants, and junior preferred stock). The fair value of the total equity is based on a discounted cash flow valuation methodology, whereby the primary input is the present value of the projected quarterly dividend payments. The fair value of the GSE's other equity instruments are then deducted from its total equity, with the remainder representing the fair value of the senior preferred stock. The primary input into the warrants valuation is the market value of the shares of common stock of the GSEs which, along with the junior preferred stock, are traded on the over-the-counter (OTC) Bulletin Board. Treasury evaluates the need for adjusting the OTC market-based valuation of the warrants for the effects, if any, of significant events occurring after the close of the market but before the end of the measurement date. Treasury records any changes in valuation, including impairment, and discloses changes in accordance with SFFAS No. 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, as amended. Since the valuation is an annual process, Treasury deems changes in valuation of the preferred stock and warrants as usual and recurring.

Treasury performs annual calculations, as of September 30, to assess the need for recording an estimated liability in accordance with SFFAS No. 5, *Accounting for Liabilities of The Federal Government*, related to the government's funding commitment to the GSEs under the SPSPAs. Liability recognition is predicated on the probable future occurrence of an excess of liabilities and minimum capital reserve amounts, as defined, over the assets of either GSE at the end of any reporting quarter. The occurrence of future GSE deficits, which ultimately determines the liability to the GSEs, is most sensitive to future changes in the housing price index and, to a lesser extent, future changes in guarantee fees received by the GSEs on single family mortgages and interest rates. For more detailed information on investments in GSEs and the amended SPSPAs, see Note 8—Investments in Government-Sponsored Enterprises.

The government offers its employees' pension and other post-employment retirement benefits, as well as life and health insurance. The Office of Personnel Management administers the largest civilian plan and the Department of Defense and Department of Veterans Affairs administer the military plans. Generally the benefits payable are recorded during the time employee services are rendered. The related liabilities for defined benefit pension plans, veterans' compensation and burial

benefits, post-retirement health benefits, life insurance benefits, education benefits, and *Federal Employees' Compensation Act* benefits are recorded at estimated present value of future benefits, less any estimated present value of future normal cost contributions. See Note 12—Federal Employee and Veteran Benefits Payable for additional information.

Y. Credit Risk

Credit risk is the potential, no matter how remote, for financial loss from a failure of a borrower or counterparty to perform in accordance with underlying contractual obligations. The government takes on credit risk when it makes direct loans or guarantees to non-federal entities, provides credits to foreign entities, or becomes exposed to institutions which engage in financial transactions with foreign countries.

The government also takes on credit risk related to committed, but undisbursed direct loans, funding commitments to GSEs, guarantee of money market funds, and other activities. These activities generally focus on the underlying problems in the credit markets. These programs were developed to provide credit where borrowers are not able to get access to credit with reasonable terms and conditions. Because these programs attempt to correct for a market imperfection, it can expose the government to potential costs and losses. The extent of the risk assumed is described in more detail in the notes to the financial statements, and where applicable, is factored into credit reform models and reflected in fair value measurements.

Note 2. Cash and Other Monetary Assets

Cash and Other Monetary Assets as of September 30, 2017, and 2016

(In billions of dollars)	2017	Restated 2016
Unrestricted cash:		
Cash held by Treasury for governmentwide operations	153.3	347.0
Other	3.7	11.6
Restricted.....	26.1	25.6
Total cash	<u>183.1</u>	<u>384.2</u>
International monetary assets	63.3	59.6
Gold and silver	11.1	11.1
Foreign currency.....	13.7	13.0
Total cash and other monetary assets	<u><u>271.2</u></u>	<u><u>467.9</u></u>

Unrestricted cash includes cash held by Treasury for governmentwide operations (Operating Cash) and all other unrestricted cash held by the federal agencies. Operating Cash represents balances from tax collections, other revenue, federal debt receipts, and other various receipts net of cash outflows for budget outlays and other payments. Treasury checks outstanding are netted against Operating Cash until they are cleared by the Federal Reserve System. Other unrestricted cash not included in Treasury's Operating Cash balance includes balances representing cash, cash equivalents, and other funds held by agencies, such as undeposited collections, deposits in transit, demand deposits, amounts held in trust, and imprest funds. Operating Cash held by the Treasury decreased by \$193.7 billion (a decrease of approximately 56 percent) in fiscal year 2017 due to Treasury's investment and borrowing decisions to manage the balance and timing of the Government's cash position.

Restrictions on cash are due to the imposition on cash deposits by law, regulation, or agreement. Restricted cash is primarily composed of cash held by the DSCA. The Foreign Military Sales Program - DSCA included \$21.3 billion and \$20.7 billion as of September 30, 2017, and 2016, respectively.

International monetary assets include the United States (U.S.) reserve position in the International Monetary Fund (IMF) and U.S. holdings of Special Drawing Rights (SDRs). The U.S. reserve position in the IMF is an interest-bearing claim on the IMF that includes the reserve asset portion of the financial subscription that the U.S. has paid in as part of its participation in the IMF as well as any amounts drawn by the IMF from a letter of credit made available by the U.S. as part of its financial subscription to the IMF. The IMF promotes international monetary cooperation and a stable payments system to facilitate growth in the world economy. Its primary activities are surveillance of members' economies, financial assistance, as appropriate, and technical assistance.

Only a portion of the U.S. financial subscription to the IMF is made in the form of reserve assets; the remainder is provided in the form of a letter of credit from the U.S. to the IMF. The balance available under the letter of credit totaled \$105.3 billion and \$105.8 billion as of September 30, 2017, and 2016 respectively. The current participation in the IMF is authorized in accordance with the *Consolidated Appropriations Act of 2016* (P.L. 114-113). The U.S. reserve position in the IMF had a U.S. dollar equivalent of \$11.5 billion and \$9.6 billion as of September 30, 2017, and 2016, respectively.

The SDR is an international reserve asset created by the IMF to supplement the existing reserve assets of its members. These interest-bearing assets can be obtained by IMF allocations, transactions with IMF member countries, or in the form of interest earnings on SDR holdings and reserve positions in the IMF. U.S. SDR holdings are an interest-bearing asset of Treasury's Exchange Stabilization Fund (ESF). The total amount of SDR holdings of the U.S. was the equivalent of \$51.5 billion and \$50.1 billion as of September 30, 2017, and 2016, respectively.

The IMF allocates SDRs to its members in proportion to each member's quota in the IMF. *The SDR Act*, enacted in 1968, authorized the Secretary of the Treasury to issue SDR Certificates (SDRCs) to the Federal Reserve in exchange for dollars. The amount of SDRCs outstanding cannot exceed the dollar value of SDR holdings. The Secretary of the Treasury

determines when Treasury will issue or redeem SDRCs. SDRCs outstanding totaled \$5.2 billion as of September 30, 2017, and 2016, and are included in Note 16—Other Liabilities.

As of September 30, 2017, and 2016, other liabilities included \$49.9 billion and \$49.3 billion, respectively, of interest-bearing liability to the IMF for SDR allocations. The SDR allocation item represents the cumulative total of SDRs distributed by the IMF to the U.S. in allocations. The U.S. has received no SDR allocations since 2009.

Gold is valued at the statutory price of \$42.2222 per fine troy ounce. The number of fine troy ounces of gold was 261,498,927 as of September 30, 2017, and 2016. The market value of gold on the London Fixing was \$1,283 and \$1,323 per fine troy ounce as of September 30, 2017, and 2016, respectively. In addition, silver is valued at the statutory price of \$1.2929 per fine troy ounce. The number of fine troy ounces of silver was 16,000,000 as of September 30, 2017, and 2016. The market value of silver on the London Fixing was \$16.86 and \$19.35 per fine troy ounce as of September 30, 2017, and 2016, respectively. Gold totaling \$11.0 billion as of September 30, 2017, and 2016, was pledged as collateral for gold certificates issued and authorized to the FRBs by the Secretary of the Treasury. Gold certificates were valued at \$11.0 billion as of September 30, 2017, and 2016, which are included in Note 16—Other Liabilities. Treasury may redeem the gold certificates at any time. Foreign currency is translated into U.S. dollars at the exchange rate at fiscal year-end. The foreign currency is maintained by the ESF and various U.S. federal agencies as well as foreign banks.

Certain PBGC amounts have been restated. Refer to Note 1.V—Restatements for more information.

Note 3. Accounts and Taxes Receivable, Net

Accounts and Taxes Receivable as of September 30, 2017, and 2016		
(In billions of dollars)	2017	Restated 2016
Accounts receivable:		
Gross accounts receivable	117.9	110.9
Allowance for uncollectible amounts	(29.8)	(30.1)
Accounts receivable, net	<u>88.1</u>	<u>80.8</u>
Taxes receivable:		
Gross taxes receivable	203.8	184.7
Allowance for uncollectible amounts	(148.6)	(132.3)
Taxes receivable, net.....	<u>55.2</u>	<u>52.4</u>
Total accounts and taxes receivable, net	<u><u>143.3</u></u>	<u><u>133.2</u></u>

Gross accounts receivable include related interest receivable of \$3.4 billion and \$3.5 billion as of September 30, 2017, and 2016, respectively.

Treasury comprises approximately 37.3 percent of the Government's reported accounts and taxes receivable, net, as of September 30, 2017. The following list of agencies comprise 97.3 percent of the Government's accounts and taxes receivable, net, of \$143.3 billion as of September 30, 2017. Please refer to the following financial statements for details on gross accounts and taxes receivable and the related allowance for uncollectible amounts:

- Treasury
- HHS
- SSA
- Department of the Interior (DOI)
- DHS
- DOD
- PBGC
- DOE
- Federal Deposit Insurance Corporation (FDIC)
- VA
- OPM
- Tennessee Valley Authority (TVA)
- DOL
- Department of Agriculture (USDA)
- United States Postal Service (USPS)
- HUD

Accounts and taxes receivable, net have historically included amounts related to criminal restitution owed to the government. Beginning in fiscal year 2017, additional information is disclosed related to these amounts for the current fiscal year. Included in accounts and taxes receivable, net is \$8.8 billion of gross receivables related to criminal restitution orders monitored by the responsible agencies, of which \$0.6 billion is determined to be collectible. Of this gross receivable amount, Treasury, HHS, and SSA collectively account for \$8.0 billion of which \$0.5 billion is determined to be collectible as of September 30, 2017.

Certain PBGC amounts have been restated. Refer to Note 1.V— Restatements for more information.

Note 4. Loans Receivable and Loan Guarantee Liabilities, Net

Loans Receivable as of September 30, 2017, and 2016

	Face Value of Loans Outstanding		Long-term Cost of (income from) Loans Outstanding		Loans Receivable, Net		Subsidy Expense (Income) for the Fiscal Year	
	2017	2016	2017	2016	2017	2016	2017	2016
(In billions of dollars)								
Federal Direct Student Loans - Education	1,058.4	953.6	16.8	(5.3)	1,041.6	958.9	5.3	16.1
Federal Family Education Loans - Education	120.9	128.0	18.5	13.1	102.4	114.9	2.4	3.5

Total loan guarantee liabilities...	2,534.9	2,399.8	1,916.5	1,852.5	42.9	18.2	12.5	(16.3)

The government has two types of loan programs: direct loans and loan guarantees. One major type of loan is direct loans such as the Department of Education's (Education) Federal Direct Student Loans. The second type is loan guarantee programs, such as the Department of Housing and Urban Development's (HUD's) Federal Housing Administration Loans program.

Direct loans and loan guarantee programs are used to promote the Nation's welfare by making financing available to segments of the population not served adequately by non-federal institutions, or otherwise providing for certain activities or investments. For those unable to afford credit at the market rate, federal credit programs provide subsidies in the form of direct loans offered at an interest rate lower than the market rate. For those to whom non-federal financial institutions are reluctant to grant credit because of the high risk involved, federal credit programs guarantee the payment of these non-federal loans and absorb the cost of defaults.

The amount of the long-term cost of post-1991 direct loans and loan guarantees outstanding equals the subsidy cost allowance for direct loans and the liability for loan guarantees (including defaulted guaranteed loans) as of September 30. The amount of the long-term cost of pre-1992 direct loans and loan guarantees equals the allowance for uncollectible amounts (or present value allowance) for direct loans and the liability for loan guarantees. The long-term cost is based on all direct loans and guaranteed loans disbursed in this fiscal year and previous years that are outstanding as of September 30. It includes the subsidy cost of these loans and guarantees estimated as of the time of loan disbursement and subsequent adjustments such as modifications, re-estimates, amortizations, and write-offs.

Net loans receivable includes related interest and foreclosed property. Foreclosed property is property that is transferred from borrowers to a federal credit program, through foreclosure or other means, in partial or full settlement of post-1991 direct loans or as a compensation for losses that the government sustained under post-1991 loan guarantees. Please refer to the financial statements of the United States Department of Agriculture (USDA), VA, and HUD for significant detailed information regarding foreclosed property. The total subsidy expense/(income) is the cost of direct loans and loan guarantees recognized during the fiscal year. It consists of the subsidy expense/(income) incurred for direct and guaranteed loans disbursed during the fiscal year, for modifications made during the fiscal year of loans and guarantees outstanding, and for upward or downward re-estimates as of the end of the fiscal year of the cost of loans and guarantees outstanding. This expense/(income) is included in the Statements of Net Cost.

Loan Programs

The majority of the loan programs are provided by Education, HUD, USDA, Small Business Administration (SBA), VA, and Export-Import Bank. For significant detailed information regarding the direct and guaranteed loan programs listed in the tables above, please refer to the financial statements of the agencies.

Education has two major loan programs, authorized by Title IV of the *Higher Education Act of 1965 (HEA)*. The first program is the William D. Ford Federal Direct Loan Program, (referred to as the Direct Loan Program) that was established in fiscal year 1994. The Direct Loan Program offered four types of educational loans: Stafford, Unsubsidized Stafford, PLUS for parents and/or graduate or professional students, and consolidation loans. With this program, the government makes loans directly to students and parents through participating institutions of higher education. Direct loans are originated and serviced through contracts with private vendors. Education disbursed approximately \$142.5 billion in Direct Loans to eligible borrowers in fiscal year 2017 and approximately \$140.5 billion in fiscal year 2016. The second program is the Federal Family Education Loan (FFEL) Program. This program was established in fiscal year 1965, and is a guaranteed loan program. Like the Direct Loan Program, it offered four types of loans: Stafford, Unsubsidized Stafford, PLUS for parents and/or graduate or professional students, and consolidation loans. The *Student Aid and Fiscal Responsibility Act (SAFRA)*, which was enacted as part of the *Health Care Education and Reconciliation Act of 2010 (P.L. 111-152)*, eliminated the authority to guarantee new FFEL after June 30, 2010. During fiscal year 2017, Education net loans receivable increased by \$70.1 billion, largely the result of increased Direct Loan Program disbursements for new loan originations and FFEL consolidations, net of borrower principal and interest collections.

HUD's Federal Housing Administration (FHA) provides mortgage insurance to encourage lenders to make credit available to expand home ownership. FHA serves many borrowers that the conventional market does not serve adequately. This includes first-time homebuyers, minorities, low-income, and other underserved households to realize the benefits of home ownership. Borrowers obtain an FHA insured mortgage and pay an upfront premium as well as an annual premium to FHA. The proceeds from those premiums are used to fund FHA program costs, including claims on defaulted mortgages and holding costs, property management fees, property sales, and other associated costs. Certain FHA amounts have been restated. Refer to Note 1.V—Restatements for more information.

USDA's Rural Development offers both direct and guaranteed loans with unique missions to bring prosperity and opportunity to rural areas. The Rural Housing programs provide affordable, safe, and sanitary housing and essential community facilities to rural communities. Rural Utility programs help improve the quality of life in rural areas through a variety of loan programs for electric energy, telecommunications, and water and environmental projects.

The Export-Import Bank aids in financing and promoting U.S. exports. Loans and guarantees extended under the medium-term loan program typically have repayment terms of one to seven years, while loans and guarantees extended under the long-term program usually have repayment terms in excess of seven years. Generally, both the medium-term and the long-term loan and guarantee programs cover up to 85 percent of the U.S. contract value of shipped goods.

The SBA provides guarantees that help small businesses obtain bank loans and licensed companies to make investments in qualifying small businesses. The SBA also makes loans to microloan intermediaries and provides a direct loan program that assists homeowners, renters and businesses recover from disasters.

VA operates the following direct loan and loan guaranty programs: Home Loans, Insurance Policy Loans, and Vocational Rehabilitation and Employment Loans. The VA Home Loans program is the largest of the VA loan programs. The Home Loans program provides loan guarantees and direct loans to veterans, service members, qualifying dependents, and limited non-veterans to purchase homes and retain homeownership with favorable market terms. During fiscal year 2017, the face value of outstanding principal on loans guaranteed by the VA increased by \$79.3 billion. This increase was primarily due to \$161.8 billion in new loans guaranteed by the VA, partially offset by \$80.8 billion in guaranteed loan terminations.

Note 5. Inventories and Related Property, Net

Inventories and Related Property, Net as of September 30, 2017, and 2016

(In billions of dollars)	All			All		
	Defense	Others	Total	Defense	Others	Total
	2017			2016		
Inventory purchased for resale	61.3	0.5	61.8	61.9	0.5	62.4

Allowance for loss	(7.3)	(0.5)	(7.8)	(6.4)	(0.5)	(6.9)
Total inventories and related property, net.....	<u>267.0</u>	<u>59.7</u>	<u>326.7</u>	<u>255.3</u>	<u>59.0</u>	<u>314.3</u>

Inventory purchased for resale is the cost or value of tangible personal property purchased by an agency for resale. As of September 30, 2017, DOD values approximately 98 percent of its resale inventory using the moving average cost (MAC) method. DOD reports the remaining 2 percent of resale inventories at an approximation of historical cost using LAC adjusted for holding gains and losses. DOD continues to implement SFFAS No. 48, *Opening Balances for Inventory, Operating Materials and Supplies, and Stockpile Materials*, permitting alternative methods in establishing opening balances. Please refer to the financial statements of DOD for more information on its inventories.

Inventory and operating materials and supplies held for repair are damaged inventory that require repair to make them suitable for sale (inventory) or is more economical to repair than to dispose of (operating materials and supplies). Excess, obsolete, and unserviceable inventory is reported at net realizable value. Inventory—excess, obsolete, and unserviceable consists of:

- Excess inventory that exceeds the demand expected in the normal course of operations and which does not meet management's criteria to be held in reserve for future sale.
- Obsolete inventory that is no longer needed due to changes in technology, laws, customs, or operations.
- Unserviceable inventory that is damaged beyond economic repair.

Operating materials and supplies held for use are tangible personal property to be consumed in normal operations.

Operating materials and supplies held in reserve for future use are materials retained because they are not readily available in the market or because they will not be used in the normal course of operations, but there is more than a remote chance they will eventually be needed. DOD, which accounts for most of the reported operating materials and supplies held for use, uses both the consumption method and the purchase method of accounting for operating materials and supplies, and expends a significant amount when purchased instead of when consumed.

Operating materials and supplies—excess, obsolete, and unserviceable consists of:

- Excess operating materials and supplies are materials that exceed the demand expected in the normal course of operations, and do not meet management's criteria to be held in reserve for future use.

- Obsolete operating materials and supplies are materials no longer needed due to changes in technology, laws, customs, or operations.
- Unserviceable operating materials and supplies are materials damaged beyond economic repair.

DOD, which accounts for most of the reported excess, obsolete, and unserviceable operating materials and supplies, revalues it to a net realizable value of zero through the allowance account. Please refer to the financial statements of DOD for more information on its operating materials and supplies. Stockpile materials include strategic and critical materials held in reserve for use in national defense, conservation, or national emergencies due to statutory requirements; for example, nuclear materials and oil, as well as stockpile materials that are authorized to be sold. The majority of the stockpile materials held for sale and stockpile materials held in reserve for future use were reported by the Department of Energy (DOE). Please refer to the financial statements of DOE for more information on stockpile materials.

Other related property consists of the following:

- Commodities include items of commerce or trade that have an exchange value used to stabilize or support market prices. Please refer to the financial statements of the USDA for detailed information regarding commodities.
- Seized monetary instruments are comprised only of monetary instruments that are awaiting judgment to determine ownership. The related liability is included in other liabilities. Other property seized by the government, such as real property and tangible personal property, is not considered a government asset. It is accounted for in agency property-management records until the property is forfeited, returned, or otherwise liquidated. Please refer to the financial statements of the Department of Justice (DOJ), Treasury, and the Department of Homeland Security (DHS) for detailed information regarding seized property.
- Forfeited property is comprised of monetary instruments, intangible property, real property, and tangible personal property acquired through forfeiture proceedings; property acquired by the government to satisfy a tax liability; and/or unclaimed/abandoned merchandise. Please refer to the financial statements of DOJ, Treasury, and DHS for detailed information regarding forfeited property.
- Foreclosed property is comprised of assets received in satisfaction of a loan receivable or as a result of payment of a claim under a guaranteed or insured loan (excluding commodities acquired under price support programs). All properties included in foreclosed property are assumed to be held for sale. Please refer to the financial statements of USDA and HUD for detailed information regarding foreclosed property.

Department of the Treasury	8.6	9.9
All other	4.0	4.2
Total securities and investments	116.2	108.2

These debt and equity securities do not include nonmarketable Treasury securities that have been eliminated in consolidation. Held-to-maturity debt and equity securities are reported as total net investment, net of unamortized discounts and premiums. Available-for-sale debt and equity securities are reported at fair value, net of unrealized gain or loss. Trading debt and equity securities are reported at fair value, net of unrealized gain or loss. PBGC and TVA invest primarily in fixed maturity and equity securities, classified as trading. PBGC reported gains related to trading securities held as of September 30, 2017 and September 30, 2016 of \$3.3 billion and \$2.2 billion, respectively. TVA reported gains related to trading securities held as of September 30, 2017 and 2016 of \$1.2 billion and \$0.9 billion, respectively. Treasury invests primarily in fixed maturity and equity securities, classified as available-for-sale and trading securities. Treasury's Exchange Stabilization Fund invests in among other things, foreign fixed maturity debt, with a fair value of \$8.5 billion and \$9.8 billion as of September 30, 2017, and 2016, respectively. The National Railroad Retirement Investment Trust (NRRIT), on behalf of the RRB, manages and invests railroad retirement assets that are to be used to pay retirement benefits to the Nation's railroad workers under the Railroad Retirement Program. As an investment company, NRRIT is subject to different accounting standards that do not require the classifications presented above. Please refer to NRRIT's financial statements for more detailed information concerning this specific investment. The TVA balance includes \$8.5 billion and \$7.3 billion as of September 30, 2017, and 2016, respectively, for the Tennessee Valley Authority Retirement System (TVARS). TVARS includes unrealized gains of \$0.8 billion and \$0.5 billion as of September 30, 2017 and 2016, respectively. The Department of the Defense reflects the majority of all other total securities and investments. PBGC, NRRIT, Treasury and TVA base market values on the last sale of a listed security, on the mean of the "bid-and-ask" for nonlisted securities, or on a valuation model in the case of fixed income securities that are not actively traded. These valuations are determined as of the end of each fiscal year. Purchases and sales of securities are recorded on the trade date. Please refer to the individual financial statements of PBGC, NRRIT, TVA, Treasury and DOD for more detailed information related to debt and equity securities. These agencies comprise 99.6 percent of the total reported debt and equity securities of \$116.2 billion as of September 30, 2017.

Certain PBGC amounts have been restated. Refer to Note 1.V— Restatements for more information.

Note 8. Investments in Government-Sponsored Enterprises

Congress established Fannie Mae and Freddie Mac as GSEs to support mortgage lending. A key function of the GSEs is to purchase mortgages, package those mortgages into securities, which are subsequently sold to investors, and guarantee the timely payment of principal and interest on these securities.

Leading up to the financial crisis, increasingly difficult conditions in the housing market challenged the soundness and profitability of the GSEs, thereby threatening to undermine the entire housing market. In response Congress passed HERA (P.L.110-289) in July 2008. This act created FHFA, with enhanced regulatory authority over the GSEs, and provided the Secretary of the Treasury with certain authorities intended to ensure the financial stability of the GSEs, if necessary. In September 2008, FHFA placed the GSEs under conservatorship and Treasury invested in the GSEs by entering into a SPSPA with each GSE. These actions were taken to preserve the GSEs' assets, ensure a sound and solvent financial condition, and mitigate systemic risks that contributed to market instability.

The purpose of such actions is to maintain the solvency of the GSEs so they can continue to fulfill their vital roles in the home mortgage market while the Administration and Congress determine what structural changes should be made to the housing finance system. Draws under the SPSPAs result in an increased investment in the GSEs as further discussed below. Per SFFAC No. 2, *Entity and Display*, these entities meet the criteria of "bailed out" entities. Accordingly, the government has not consolidated them into the financial statements, but included disclosure of the relationship(s) with the bailed out entities and any actual or potential material costs or liabilities in the consolidated financial statements.

Senior Preferred Stock Purchase Agreements

Under the SPSPAs, Treasury initially received from each GSE: 1) 1,000,000 shares of non-voting variable liquidation preference senior preferred stock with a liquidation preference value of \$1,000 per share and 2) a non-transferable warrant for the purchase, at a nominal cost, of 79.9 percent of common stock on a fully-diluted basis. The warrants expire on September 7, 2028. Under the amended SPSPAs, the quarterly dividend payment changed from a 10.0 percent per annum fixed rate dividend on the total liquidation preference to an amount equivalent to the GSE's positive net worth above a capital reserve amount. The capital reserve amount, which was initially set at \$3.0 billion for calendar year 2013, declines by \$600 million at the beginning of each calendar year thereafter until it reaches zero by calendar year 2018. On January 1, 2017, and 2016, the capital reserve amount had declined to \$600 million and \$1.2 billion for calendar years 2017 and 2016, respectively. The GSEs will not pay a quarterly dividend if their positive net worth is below the required capital reserve threshold. Cash dividends of \$25.3 billion and \$11.5 billion were received during fiscal years ended September 30, 2017, and 2016, respectively.

The SPSPAs, which have no expiration date, provide that Treasury will disburse funds to the GSEs if at the end of any quarter, the FHFA determines that the liabilities of either GSE exceed its assets. Draws from Treasury under the SPSPAs are designed to ensure that the GSEs maintain positive net worth, with a fixed maximum amount available to each GSE under this agreement established as of December 31, 2012 (refer to the "Contingent Liability to GSEs" section below). Draws against the funding commitment of the SPSPAs do not result in the issuance of additional shares of senior preferred stock; instead, it increases the liquidation preference of the initial 1,000,000 shares by the amount of the draw. The combined cumulative liquidation preference totaled \$189 billion as of September 30, 2017 and 2016. There were no payments to the GSEs for the fiscal years ended September 30, 2017 and 2016. Refer to Note 25—Subsequent Events for additional information.

Senior Preferred Stock and Warrants for Common Stock

In determining the fair value of the senior preferred stock and warrants for common stock, Treasury relied on the GSEs' public filings and press releases concerning their financial statements, as well as non-public, long-term financial forecasts, monthly summaries, quarterly credit supplements, independent research regarding preferred stock trading, independent research regarding the GSEs' common stock trading on the OTC Bulletin Board, discussions with each of the GSEs and FHFA, and other information pertinent to the valuations. Because the instruments are not publicly traded, there is no comparable trading information available. The fair valuations rely on significant unobservable inputs that reflect assumptions about the expectations that market participants would use in pricing.

The fair value of the senior preferred stock considers the amount of forecasted dividend payments. The fair valuations assume that a hypothetical buyer would acquire the discounted dividend stream as of the transaction date. The fair value of the senior preferred stock decreased as of September 30, 2017 when compared to September 30, 2016, primarily reflecting a higher discount rate which was driven by a higher long-term Treasury rate (or risk-free rate), as well as an increase in the market value of the GSEs' other equity securities that comprise their total equity.

Factors impacting the fair value of the warrants include the nominal exercise price and the large number of potential exercise shares, the market trading of the common stock that underlies the warrants as of September 30, the principal market, and the market participants. Other factors impacting the fair value include, among other things, the holding period risk related directly to the assumption of the amount of time that it will take to sell the exercised shares without depressing the market. The fair value of the warrants increased at the end of fiscal year 2017, when compared to 2016, primarily due to increases in the market price of the underlying common stock of each GSE.

Contingent Liability to GSEs

As part of the annual process undertaken by Treasury, a series of long-term financial forecasts are prepared to assess, as of September 30, the likelihood and magnitude of future draws to be required by the GSEs under the SPSPAs within the forecast time horizon. Treasury used 25-year financial forecasts prepared through years 2042 and 2041 in assessing if a contingent liability was required as of September 30, 2017 and 2016, respectively. If future payments under the SPSPAs are deemed to be probable within the forecast horizon, Treasury will estimate and accrue a contingent liability to the GSEs to reflect the forecasted equity deficits of the GSEs. This accrued contingent liability will be undiscounted and will not take into account any of the offsetting dividends that could be received, as the dividends, if any, would be owed directly to the General Fund. Such recorded accruals will be adjusted in subsequent years as new information develops or circumstances change.

Based on the annual forecasts as of September 30, 2017 and 2016, Treasury estimated there was no probable future funding draws. However, the reduction in the U.S. corporate income tax rate resulting from the enactment of the *Tax Cuts and Job Act* on December 22, 2017, required that each of Fannie Mae and Freddie Mac record a reduction in the value of their deferred tax assets in the quarter in which the legislation was enacted, impacting potential future funding draws. The funding draws and the associated amounts are expected to be realized in March 2018. Management believes the amounts of such draws will not be material to the consolidated financial statements. At September 30, 2017 and 2016, the maximum remaining contractual commitment to the GSEs for the remaining life of the SPSPAs was \$258.1 billion. Subsequent funding draws will reduce the remaining commitments. Refer to Note 19—Commitments for a full description of other commitments and risks.

In assessing the need for an estimated contingent liability, Treasury relied on the GSEs' public filings and press releases concerning their financial statements, monthly summaries, and quarterly credit supplements, as well as non-public, long-term financial forecasts, the FHFA House Price Index, discussions with each of the GSEs and FHFA, and other information pertinent to the liability estimates. The forecasts prepared in assessing the need for an estimated contingent liability as of September 30, 2017 include three potential wind-down scenarios, with varying assumptions regarding the timing as to when the GSEs would cease issuing new guaranteed mortgage-backed securities. The forecasts also assume a continued gradual wind-down of the retained portfolios (and corresponding net interest income) through 2018, as directed under the amended SPSPAs for each GSE to reduce the maximum balance of its retained mortgage portfolio by 15.0 percent per annum beginning December 31, 2013. The maximum balance of the GSEs' retained mortgage portfolio was initially set at \$650 billion as of December 31, 2012, and the amended SPSPAs requires that GSEs reduce this maximum balance to \$250 billion by December 31, 2018.

Estimation Factors

Treasury's forecasts concerning the GSEs may differ from actual experience. Estimated senior preferred values and future draw amounts will depend on numerous factors that are difficult to predict including, but not limited to, changes in government policy with respect to the GSEs, the business cycle, inflation, home prices, unemployment rates, interest rates, changes in housing preferences, home financing alternatives, availability of debt financing, market rates of guarantee fees, outcomes of loan refinancings and modifications, new housing programs, and other applicable factors.

Regulatory Environment

To date, Congress has not approved a plan to address the future of the GSEs, thus the GSEs continue to operate under the direction of their conservator, the FHFA, whose stated strategic goals for the GSEs are to: (1) maintain foreclosure prevention activities and credit availability to foster liquid, efficient, competitive, and resilient national housing finance markets; (2) reduce taxpayer risk through increasing the role of private capital in the mortgage market, and (3) build a new single-family securitization infrastructure.

The *Temporary Payroll Tax Cut Continuation Act of 2011* (P.L. 112-78) was funded by an increase of 10-basis points in the GSEs' guarantee fees (referred to as "the incremental fees") which began in April 2012, and is effective through October 1, 2021. The incremental fees are to be remitted to Treasury and not retained by the GSEs and, thus, do not affect the profitability of the GSEs. For fiscal years 2017 and 2016, the GSEs remitted to Treasury the incremental fees totaling \$3.2 billion and \$2.8 billion, respectively.

As of September 30, 2017, and 2016, GSEs investments consisted of the following:

Investments in GSEs as of September 30, 2017			
(In billions of dollars)	Gross Investments	Cumulative Valuation Gain/(Loss)	Fair Value
Fannie Mae senior preferred stock	117.0	(74.5)	42.5
Freddie Mac senior preferred stock	72.1	(41.0)	31.1
Fannie Mae warrants common stock	3.1	9.2	12.3
Freddie Mac warrants common stock	2.3	4.4	6.7
Total investments in GSEs	<u>194.5</u>	<u>(101.9)</u>	<u>92.6</u>
Investments in GSEs as of September 30, 2016			
(In billions of dollars)	Gross Investments	Cumulative Valuation Gain/(Loss)	Fair Value
Fannie Mae senior preferred stock	117.0	(58.9)	58.1
Freddie Mac senior preferred stock	72.1	(32.5)	39.6
Fannie Mae warrants common stock	3.1	4.0	7.1
Freddie Mac warrants common stock	2.3	1.5	3.8
Total investments in GSEs	<u>194.5</u>	<u>(85.9)</u>	<u>108.6</u>

Note 9. Other Assets

Other Assets as of September 30, 2017, and 2016		
(In billions of dollars)	2017	Restated 2016
Advances and prepayments.....	97.4	92.9
Regulatory assets.....	20.0	21.8
FDIC receivable from resolution activity	9.3	9.0
Other	21.0	21.8
Total other assets	147.7	145.5

Advances and prepayments are assets that represent funds disbursed in contemplation of the future performance of services, receipt of goods, the incurrence of expenditures, or the receipt of other assets. These include advances to contractors and grantees, travel advances, and prepayments for items such as rents, taxes, insurance, royalties, commissions, and supplies.

With regard to regulatory assets, the DOE's Power Marketing Administrations (PMAs) and the TVA record certain amounts as assets in accordance with Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Topic 980, *Regulated Operations*. The provisions of FASB ASC Topic 980 require that regulated enterprises reflect rate actions of the regulator in their financial statements, when appropriate. These rate actions can provide reasonable assurance of the existence of an asset, reduce or eliminate the value of an asset, or impose a liability on a regulated enterprise. In order to defer incurred costs under FASB ASC Topic 980, a regulated entity must have the statutory authority to establish rates that recover all costs, and those rates must be charged to and collected from customers. If the PMAs' or TVA's rates should become market-based, FASB ASC Topic 980 would no longer be applicable, and all of the deferred costs under that standard would be expensed. Other items included in "other" are purchased power generating capacity, deferred nuclear generating units, nonmarketable equity investments in international financial institutions, derivative assets, and the balance of assets held by the experience rated carriers participating in the Health Benefits and Life Insurance Program (pending disposition on behalf of OPM).

The Federal Deposit Insurance Corporation (FDIC) has the responsibility for resolving failed institutions in an orderly and efficient manner. The resolution process involves valuing a failing institution, marketing it, soliciting and accepting bids for the sale of the institution, determining which bid is least costly to the insurance fund, and working with the acquiring institution through the closing process. FDIC records receivables for resolutions that include payments by the Deposit Insurance Fund to cover obligations to insured depositors, advances to receiverships and conservatorships for working capital, and administrative expenses paid on behalf of receiverships and conservatorships.

Certain PBGC amounts have been restated. Refer to Note 1.V—Restatements for more information.

Note 10. Accounts Payable

Accounts Payable as of September 30, 2017, and 2016

(In billions of dollars)	2017	2016
Department of Defense	26.4	18.3
Department of Justice	6.0	6.2
Department of Education	4.2	4.0
Department of the Treasury	3.9	4.4
Department of Energy	3.7	3.6
Department of Veterans Affairs	3.6	4.8
General Services Administration	2.8	2.4
Department of State	2.7	2.5
Department of Homeland Security.....	2.3	2.0
U.S. Agency for International Development.....	1.8	1.7
Tennessee Valley Authority	1.8	1.5
Department of Agriculture.....	1.8	1.9
U.S. Postal Service	1.6	1.8
All other.....	8.2	7.3
Total accounts payable	<u>70.8</u>	<u>62.4</u>

Accounts payable includes amounts due for goods and property ordered and received, services rendered by other than federal employees, cancelled appropriations for which the U.S. government has contractual commitments for payment, and non-debt related interest payable.

Total federal debt securities held by the public and accrued interest	<u>14,221.1</u>	<u>503.0</u>	<u>14,724.1</u>		

Types of marketable securities:

Bills—Short-term obligations issued with a term of 1 year or less.

Notes—Medium-term obligations issued with a term of 2-10 years.

Bonds—Long-term obligations of more than 10 years.

TIPS—Term of more than 5 years.

FRN—Term of 2 years.

Federal debt securities held by the public outside the Government are held by individuals, corporations, state or local governments, FRBs, foreign governments, and other entities outside the federal government. The above table details Government borrowing primarily to finance operations and shows marketable and nonmarketable securities at face value less net unamortized premiums and discounts including accrued interest.

Securities that represent federal debt held by the public are issued primarily by the Treasury and include:

- Interest-bearing marketable securities (bills, notes, bonds, inflation-protected, and floating rate notes).
- Interest-bearing nonmarketable securities (government account series held by deposit and fiduciary funds, foreign series, state and local government series, domestic series, and savings bonds).
- Non-interest-bearing marketable and nonmarketable securities (matured and other).

Section 3111 of Title 31, United States Code (U.S.C.) authorizes the Secretary of the Treasury to use money received from the sale of an obligation and other money in the General Fund to buy, redeem, or refund, at or before maturity, outstanding bonds, notes, certificates of indebtedness, Treasury bills, or savings certificates of the Government.

Gross federal debt (with some adjustments) is subject to a statutory ceiling (i.e., the debt limit). Prior to 1917, Congress approved each debt issuance. In 1917, to facilitate planning in World War I, Congress and the President first enacted a statutory dollar ceiling for federal borrowing. With the *Public Debt Act of 1941* (P.L. 77-7), Congress and the President set an overall limit of \$65 billion on Treasury debt obligations that could be outstanding at any one time; since then, Congress and the President have enacted a number of debt limit increases.

During fiscal years 2017 and 2016, Treasury faced two delays in raising the statutory debt limit that required it to depart from its normal debt management operations and to invoke legal authorities to avoid exceeding the statutory debt limit. During these periods, extraordinary actions taken by Treasury have resulted in federal debt securities not being issued to certain federal accounts. The first period occurred from March 16, 2015 to October 30, 2015. On Monday, November 2, 2015, The *Bipartisan Budget Act of 2015* (P.L. 114-74) was enacted suspending the statutory debt limit through March 15, 2017. The second delay in raising the statutory debt limit occurred from March 16, 2017 through September 7, 2017. On Friday, September 8, 2017 the *Continuing Appropriations Act, 2018 and Supplemental Appropriations for Disaster Relief Requirements Act, 2017* (P.L. 115-56) was enacted suspending the statutory debt limit through December 8, 2017.

As of September 30, 2017, and 2016, debt subject to the statutory debt limit was \$20,208.6 billion and \$19,538.5 billion, respectively. The debt subject to the limit includes Treasury securities held by the public and Government guaranteed debt of federal agencies (shown in the table above) and intragovernmental debt holdings (shown in the following table). See Note 25—Subsequent Events for additional information.

**Intragovernmental Debt Holdings: Federal Debt Securities
Held as Investments by Government Accounts as of September 30, 2017, and 2016**

(In billions of dollars)	Balance 2016	Net Change During Fiscal Year 2017	Balance 2017
Social Security Administration, Federal Old-Age and Survivors Insurance Trust Fund	2,796.7	23.5	2,820.2
Office of Personnel Management, Civil Service Retirement and Disability Fund.....	887.2	17.9	905.1

Subtotal	5,399.9	171.6	5,571.5
Total net unamortized premiums/(discounts) for intragovernmental.....	72.7	(0.5)	72.2
Total intragovernmental debt holdings, net	5,472.6	171.1	5,643.7

Intragovernmental debt holdings represent the portion of the gross federal debt held as investments by government entities such as trust funds, revolving funds, and special funds.

Government entities that held investments in Treasury securities include trust funds that have funds from dedicated collections. For more information on funds from dedicated collections, see Note 20—Funds from Dedicated Collections. These intragovernmental debt holdings are eliminated in the consolidation of these financial statements.

Note 12. Federal Employee and Veteran Benefits Payable

The Government offers its employees retirement and other benefits, as well as health and life insurance. The liabilities for these benefits, which include both actuarial amounts and amounts due and payable to beneficiaries and health care carriers, apply to current and former civilian and military employees. Large fluctuations in actuarial amounts can result from changes in estimates to future outflows for benefits based on complex assumptions and cost models.

OPM administers the largest civilian plan. DOD and VA administer the largest military plans. Other significant pension plans with more than \$10 billion in accrued benefits payable include those of the Coast Guard (DHS), Foreign Service (DOS), TVA, USPS, and HHS's Public Health Service Commissioned Corps Retirement System. Please refer to the financial statements of the agencies listed for further details regarding their pension plans and other benefits.

In accordance with SFFAS No. 33, *Pension, Other Retirement Benefits, and Other Postemployment Benefits: Reporting the Gains and Losses from Changes in Assumptions and Selecting Discount Rates and Valuation Dates*, agencies are required to separately present gains and losses from changes in long-term assumptions used to estimate liabilities associated with pensions, Other Retirement Benefits (ORB), and Other Postemployment Benefits (OPEB) on the Statement of Net Cost. SFFAS No. 33 also provides a standard for selecting the discount rate assumption for present value estimates of federal employee pension, ORB, and OPEB liabilities. The SFFAS No. 33 standard for selecting the discount rate assumption requires it be based on a historical average of interest rates on marketable Treasury securities consistent with the cash flows being discounted. Additionally, SFFAS No. 33 provides a standard for selecting the valuation date for estimates of federal employee pension, ORB, and OPEB liabilities that establishes a consistent method for such measurements.

To provide a sustainable, justifiable data resource for the affected agencies, Treasury developed a new model and methodology for developing these interest rates in fiscal year 2014. The new method that was developed is based on methodology used to produce the High Quality Market (HQM) Yield Curve pursuant to the Pension Protection Act of 2006.² As of July 2014, Treasury began releasing interest rate yield curve data using this new U.S. Department of the Treasury's Yield Curve for Treasury Nominal Coupon Issues (TNC yield curve), which is derived from Treasury notes

² Treasury's HQM resource is available at: <https://www.treasury.gov/resource-center/economic-policy/corp-bond-yield/Pages/Corp-Yield-Bond-Curve-Papers.aspx>.

and bonds. The TNC yield curve provides information on Treasury nominal coupon issues and the methodology extrapolates yields beyond 30 years through 100 years maturity. The TNC yield curve is used to produce a Treasury spot yield curve (a zero coupon curve), which provides the basis for discounting future cash flows.

Civilian Employees

Pensions

OPM administers the largest civilian pension plan, which covers substantially all full-time, permanent civilian federal employees. This plan includes two components of defined benefits, the Civil Service Retirement System (CSRS) and the Federal Employees' Retirement System (FERS). The basic benefit components of the CSRS and the FERS are financed and operated through the Civil Service Retirement and Disability Fund (CSRDF), a trust fund. CSRDF monies are generated primarily from employees' contributions, agency contributions, payments from the General Fund, and interest on investments in Treasury securities.

The Federal Retirement Thrift Investment Board administers the TSP. The TSP investment options include two fixed income funds (the G and F Funds), three stock funds (the C, S, and I Funds) and five lifecycle funds (L 2050, L 2040, L 2030, L 2020, and L Income). The L Funds diversify participant accounts among the G, F, C, S, and I Funds, using professionally determined investment mixes (allocations) that are tailored to different time horizons. Treasury securities held in the G Fund are included in federal debt securities held by the public and accrued interest on the Balance Sheet. The G Fund held \$217.9 billion and \$220.9 billion in nonmarketable Treasury securities as of September 30, 2017, and 2016, respectively.

The liability for civilian pension and accrued benefits payable increased \$103.1 billion. This increase is largely attributable to changes in actuarial assumptions. The assumption loss results primarily from decreases to the assumed rates of interest and to changes in demographic assumptions.

Post-Retirement Health Benefits

The post-retirement civilian health benefit liability is an estimate of the Government's future cost of providing post-retirement health benefits to current employees and retirees. Although active and retired employees pay insurance premiums under the Federal Employees Health Benefits Program (FEHB), these premiums cover only a portion of the costs. The OPM actuary applies economic and demographic assumptions to historical cost information to estimate the liability.

The *Postal Accountability and Enhancement Act of 2006* (Postal Act of 2006) (P.L. No 109-435, Title VIII), made significant changes in the funding of future retiree health benefits for employees of the USPS, including the requirement for the USPS to make scheduled payments to the Postal Service Retiree Health Benefits (PSRHB) Fund. Various legislation requires the USPS to make scheduled payments to the PSRHB Fund ranging from \$5.4 billion to \$5.8 billion per year from fiscal year 2007 through fiscal year 2016. Thereafter, the law requires USPS to make annual payments in the amount of the normal cost plus or minus an amount to amortize the unfunded liability or surplus. USPS currently owes the PSRHB Fund a total of \$38.2 billion consisting of: \$11.1 billion for fiscal year 2012, \$5.6 billion for fiscal year 2013, \$5.7 billion for both fiscal years 2014 and 2015, \$5.8 billion for fiscal year 2016, and \$4.3 billion for fiscal year 2017. As of September 30, 2017, USPS has not indicated its intention regarding payment of the \$38.2 billion due. At this time, Congress has not taken further action on these payments due to the PSRHB Fund from USPS. The cost for each year's payment, including any defaulted payment, along with all other benefit program costs, are included in USPS' net cost for that year in the consolidated Statements of Net Cost.

The post-retirement civilian health benefit liability increased \$23.4 billion. This increase is due to the accruing cost of benefits, interest on the existing liability and an actuarial loss primarily attributable to updated demographic assumptions used in the fiscal year 2017 calculation.

Life Insurance Benefits

One of the other significant employee benefits is the Federal Employee Group Life Insurance (FEGLI) Program. Employee and annuitant contributions and interest on investments fund a portion of this liability. The actuarial life insurance liability is the expected present value of future benefits to pay to, or on behalf of, existing FEGLI participants, less the expected present value of future contributions to be collected from those participants. The OPM actuary uses salary increase and interest rate yield curve assumptions that are generally consistent with the pension liability.

Workers' Compensation Benefits

The DOL determines both civilian and military agencies' liabilities for future workers' compensation benefits for civilian federal employees, as mandated by the Federal Employees' Compensation Act (FECA), for death, disability, medical, and miscellaneous costs for approved compensation cases, and a component for incurred, but not reported, claims. The FECA liability is determined annually using historical benefit payment patterns related to injury years to predict the future payments.

The actuarial methodology provides for the effects of inflation and adjusts historical payments to constant dollars by applying wage inflation factors (cost-of-living adjustments or COLA) and medical inflation factors (consumer price index-medical or CPIM) to the calculation of projected benefits.

DOL selects the COLA factors, CPIM factors, and discount rate by averaging the COLA rates, CPIM rates, and interest rates for the current and prior four years. Using averaging renders estimates that reflect historical trends over five years instead of conditions that exist in one year.

The COLAs and CPIMs used in the projections for fiscal year 2017 are listed below in the table.

Fiscal Year	COLA	CPIM
2018	1.22%	3.20%
2019	1.35%	3.52%
2020	1.59%	3.80%
2021	1.99%	3.99%
2022+	2.26%	3.91%

DOL selected the interest rate assumptions whereby projected annual payments were discounted to present value based on interest rate assumptions on the TNC Yield Curve to reflect the average duration of income payments and medical payments. The average durations for income payments and medical payments were 14.7 years and 9.5 years, respectively. Based on averaging the TNC Yield Curves for the current and prior four years, the interest rate assumptions for income payments and medical payments were 2.68% and 2.22%, respectively.

For the COLAs, CPIMs, average durations, and interest rate assumptions used in the projections for fiscal year 2016, refer to the *Fiscal Year 2016 Financial Report of the U.S. Government*.

Military Employees (Including Veterans)

Pensions

The military retirement system consists of a funded, noncontributory, defined benefit plan. It applies to military personnel (Departments of Army, Navy, Air Force, and the Marine Corps). This system includes non-disability retired pay, disability retired pay; survivor annuity programs, and Combat-Related Special Compensation. The Service Secretaries may approve immediate non-disability retired pay at any age with credit of at least 20 years of active duty service. Reserve retirees must be at least 60 years old and have at least 20 qualifying years of service before retired pay commences; however, in some cases, the age can be less than 60 if the reservist performs certain types of active service. P.L. 110-181 provides for a 90-day reduction in the reserve retirement age from age 60 for every 3 months of certain active duty service served within a fiscal year for service after January 28, 2008 (not below age 50). There is no vesting of benefits before non-disabled retirement. There are distinct non-disability benefit formulas related to four populations within the Military Retirement System: Final Pay, High-3, Career Status Bonus/Redux, and the Blended Retirement System (BRS) enacted in the *National Defense Authorization Act for Fiscal Year 2016*, effective January 1, 2018. The BRS is a new retirement benefit merging aspects of both a defined benefit annuity with a defined contribution account, through the Thrift Savings Plan (TSP). The date an individual enters the military determines which retirement system they would fall under and if they have the option to pick their retirement system. Military personnel with a start date on or after January 1, 2018 are automatically enrolled in BRS. Although all members serving as of December 31, 2017 are grandfathered under the existing retirement system, Active Duty, National Guard and Reserve personnel meeting established criteria may opt into BRS during calendar year 2018. Under the BRS, retiring members are given the option to receive a portion of their retired pay annuity in the form of a lump sum distribution. For more information on these benefits, see DOD's Office of Military Compensation website <https://militarypay.defense.gov>.

The DOD Military Retirement Fund was established by P.L. 98-94 (currently Chapter 74 of Title 10, U.S.C.) and accumulates funds to finance, on an accrual basis, the liabilities of DOD military retirement and survivor benefit programs. This Fund receives income from three sources: monthly normal cost payments from the Services and Treasury to pay for the current years' service cost; annual payments from the Treasury to amortize the unfunded liability and pay for the increase in the normal cost attributable to Concurrent Receipt per P.L. 108-136; and investment income.

The \$77.4 billion increase in the Military Retirement Pension liability is primarily attributable to a reduction in the discount rate related to requirements prescribed by SFFAS No. 33, *Pensions, Other Retirement Benefits, and Other Postemployment Benefits*, and the expected increase from normal and interest costs offset by benefit payments. Liabilities in the future will depend on expected changes due to interest and benefit accruals, future benefit changes, assumption changes, and actuarial experience.

Post-Retirement Health Benefits

Military retirees who are not yet eligible for Medicare (and their eligible non-Medicare eligible dependents) are eligible for post-retirement medical coverage provided by DOD. Depending on the benefit plan selected, retirees and their eligible dependents may receive care from military treatment facilities (MTFs) on a space-available basis or from civilian providers. This TRICARE coverage is available in Indemnity (health plan that allows you to visit almost any doctor or hospital you choose), preferred provider organization [(PPO) – health plan that contracts with medical providers to create a network of participating providers; member cost-shares are typically higher for services received out-of-network] and health maintenance organization [(HMO) – health plan that limits services to a specific network of medical personnel and facilities and usually by requiring referral by a primary-care physician for specialty care] designs, with varying levels of cost sharing. These postretirement medical benefits are paid by the Defense Health Agency on a pay-as-you-go basis.

Since fiscal year 2002, DOD has provided medical coverage to Medicare-eligible retirees (and their eligible Medicare-eligible dependents). This coverage, called TRICARE for Life (TFL), is a Medicare Supplement plan which includes inpatient, outpatient and pharmacy coverage. Enrollment in Medicare Part B is required to maintain eligibility in TFL. Retirees with TFL coverage can obtain care from MTFs on a space-available basis or from civilian providers.

10 U.S.C., Chapter 56 created the DOD Medicare-Eligible Retiree Health Care Fund (MERHCF), which became operative on October 1, 2002. The purpose of this fund is to account for and accumulate funds for the health benefit costs of Medicare-eligible military retirees, and their dependents and survivors who are Medicare eligible. The Fund receives revenues from three sources: interest earnings on MERHCF assets, Uniformed Services normal cost contributions, and Treasury contributions. The DOD Medicare-Eligible Retiree Health Care Board of Actuaries (the Board) approves the methods and assumptions used in actuarial valuations of the MERHCF for the purpose of calculating the per capita normal cost rates (to fund the annual accrued benefits) and determining the unfunded liability amortization payment (the U.S. Treasury contribution). The Secretary of Defense directs the Secretary of Treasury to make DOD's normal cost payments. The MERHCF pays for medical costs incurred by Medicare-eligible beneficiaries at MTFs and civilian providers (including capitated payments to U.S. Family Health Plans for grandfathered beneficiaries), plus the costs associated with claimed administration. The actuaries calculate the actuarial liabilities annually using assumptions and actual experience (e.g., mortality and retirement rates, health care costs, medical trend rates, and the discount rate).

Military post-retirement health and accrued benefits payable decreased \$18.1 billion. This decrease is due primarily to changes in key actuarial assumptions, and actuarial experience being more favorable from what has been assumed (demographic and claims data).

In addition to the health care benefits the federal government provides for civilian and military retirees and their dependents, the VA also provides medical care to veterans on an "as available" basis, subject to the limits of the annual appropriations. In accordance with 38 CFR 17.36 (c), VA's Secretary makes an annual enrollment decision that defines the veterans, by priority, who will be treated for that fiscal year subject to change based on funds appropriated, estimated collections, usage, the severity index of enrolled veterans, and changes in cost. While VA expects to continue to provide medical care to veterans in future years, an estimate of such future benefits cannot be reasonably made. Accordingly, VA recognizes the medical care expenses in the period the medical care services are provided. For the fiscal years 2013 through 2017, the average medical care cost per year was \$58.0 billion.

Veterans Compensation and Burial Benefits

The Government compensates disabled veterans and their survivors. Veterans' compensation is payable as a disability benefit or a survivor's benefit. Entitlement to compensation depends on the veteran's disabilities having been incurred in, or aggravated during, active military service; death while on duty; or death resulting from service-connected disabilities, if not on active duty.

Eligible veterans who die or are disabled from military service-related causes, as well as their dependents, receive compensation benefits. Also, veterans are provided with burial flags, headstones/markers, and grave liners for burial in a VA

national cemetery or are provided a burial flag, headstone/marker and a plot allowance for burial in a private cemetery. These benefits are provided under 38 U.S.C., Part 2, Chapter 23 in recognition of a veteran's military service and are recorded as a liability in the period the requirements are met.

The liability for veterans' compensation and burial benefits payable is based on an actuarial estimate of future compensation and burial payments and increased by \$313.7 billion in fiscal year 2017. The \$313.7 billion increase is primarily attributable to assumption changes and experience. The major experience impact was a higher than expected number of veterans who became eligible for benefits during fiscal year 2017. The major assumption change impacts were from a decrease in the discount rate and an increase in assumed future new compensation case rates.

Several significant actuarial assumptions were used in the valuation of compensation and burial benefits to calculate the present value of the liability. A liability was recognized for the projected benefit payments to: 1) those beneficiaries, including veterans and survivors, currently receiving benefit payments; 2) current veterans who will in the future become beneficiaries of the compensation program; and 3) a proportional share of those in active military service as of the valuation date who will become eligible disabled veterans in the future. Future benefit payments to survivors of those veterans in classes 1, 2, and 3 above are also incorporated into the projection. The projected liability does not include any administrative costs.

The veterans' compensation and burial benefits liability is developed on an actuarial basis. It is impacted by interest on the liability balance, experience gains or losses, changes in actuarial assumptions, prior service costs, and amounts paid for costs included in the liability balance.

Change in Veterans Compensation and Burial Benefits						
	Compensation		Burial		Total	
	2017	2016	2017	2016	2017	2016

Veterans Education Benefits

For eligible Veterans and their dependents, the VA provides four unique education/retraining type programs:

- Post 9/11 GI Bill
- Montgomery GI Bill-Active Duty (MGIB-AD)
- Vocational Rehabilitation and Employment (VR&E)
- Dependent Education Assistance (DEA)

In fiscal year 2016, VA reported an estimated liability for the Post 9/11 GI Bill of \$59.6 billion. This was the first time VA had reported this estimated liability and the models and assumptions used were conservative with limited experience studies or assumptions. At that time, VA had not developed models or estimates for the other three programs listed; however, it was management’s assertion that the amount recorded for the Post 9/11 GI Bill was large enough to include any liability for the other three programs. In fiscal year 2017, VA broke out each program and developed individual estimates based on actuarial standards. While not reported last year, VA did develop an estimate for fiscal year 2016 for each of the new programs to be used for comparisons only. These estimates reflect an increase in the liability of \$8.7 billion. This amount is presented as “Other” in the schedule of “Changes in Veterans Education Benefits” provided below.

The decrease in the liability of \$14.8 billion from “Actuarial (gains)/losses from assumption changes” included the impacts of refinements to the modeling of the Post 9/11 GI Bill program (liability decrease of \$29.3 billion); prior service costs associated with the “Forever GI Bill of 2017,” which eliminated the 15-year limitation for using the benefit (liability increase of \$8.2 billion); and other assumption changes (liability increase of \$6.3 billion).

For details regarding actuarial assumptions and the four unique education/retraining type programs, please refer to VA’s financial statements.

Change in Veterans Education Benefits		
(In billions of dollars)	2017	2016
Actuarial accrued liability, beginning of fiscal year.....	59.6	53.1
Current year expense:		
Interest on liability	0.7	0.2
Actuarial (gains)/losses (from experience)	9.3	18.0
Actuarial (gains)/losses (from assumption changes)	(14.8)	-
Other	8.7	-
Total current year expense.....	3.9	18.2
Less benefits paid	(12.8)	(11.7)
Actuarial accrued liability, end of fiscal year	<u>50.7</u>	<u>59.6</u>

Life Insurance Benefits

The largest veterans’ life insurance programs consist of the following:

- National Service Life Insurance (NSLI) covers policyholders who served during World War II.
- Veterans’ Special Life Insurance (VSLI) was established in 1951 to meet the insurance needs of veterans who served during the Korean Conflict and through the period ending January 1, 1957.
- Service-Disabled Veterans Insurance (S-DVI) program was established in 1951 to meet the insurance needs of veterans who received a service-connected disability rating.

The components of veteran life insurance liability for future policy benefits are presented below:

Veterans Life Insurance Liability as of September 30, 2017, and 2016		
(In billions of dollars)	2017	2016
Insurance death benefits:		
NSLI.....	2.8	3.4
VSLI.....	1.2	1.3
S-DVI.....	0.7	0.6
Other.....	0.3	0.3
Total death benefits.....	<u>5.0</u>	<u>5.6</u>
Death benefit annuities.....	-	0.1
Disability income & waiver.....	0.8	0.8
Insurance dividends payable.....	1.1	1.2
Total veterans life insurance liability.....	<u>6.9</u>	<u>7.7</u>

Insurance dividends payable consists of dividends left on a deposit with VA, related interest payable, and dividends payable to policyholders.

The VA supervises Service members Group Life Insurance (SGLI) and Veterans Group Life Insurance programs that provide life insurance coverage to members of the uniformed armed services, reservists, and post-Vietnam Veterans as well as their families. VA has entered into a group policy with the Prudential Insurance Company of America to administer and provide the insurance payments under these programs. All SGLI insureds are automatically covered under the Traumatic Injury Protection (TSGLI) program, which provides for insurance payments to veterans who suffer a serious traumatic injury in service.

Pension Benefits

The VA also provides certain veterans and/or their dependents with pension benefits, based on annual eligibility reviews, if the veteran died or was disabled for nonservice-related causes. VA pension benefits are recognized as a non-exchange transaction due to the nature of the VA pension plan. Therefore, the actuarial present value of these future benefits is not required to be recorded on the Balance Sheet. The projected amounts of future payments for pension benefits (presented for informational purposes only) as of September 30, 2017, and 2016, was \$87.6 billion and \$87.2 billion, respectively.

Note 13. Environmental and Disposal Liabilities

Environmental and Disposal Liabilities as of September 30, 2017, and 2016

(In billions of dollars)

	2017	2016
Department of Energy:		
Environmental and disposal liabilities	383.8	371.8
Department of Defense:		
Environmental restoration liabilities	27.4	26.8
Environmental disposal for military equipment/weapons programs	16.3	14.8
Other environmental liabilities-non-BRAC	11.2	9.3
Chemical weapons disposal program	8.7	7.1
Base realignment and closure installations (BRAC)	4.7	4.6
Total Department of Defense	68.3	62.6
All other agencies	12.4	12.2
Total environmental and disposal liabilities	464.5	446.6

During World War II and the Cold War, DOE (or predecessor agencies) developed a massive industrial complex to research, produce, and test nuclear weapons. This included nuclear reactors, chemical-processing buildings, metal machining plants, laboratories, and maintenance facilities that manufactured tens of thousands of nuclear warheads and conducted more than 1,000 nuclear tests.

At all sites where these activities took place, some environmental contamination occurred. This contamination was caused by the production, storage, and use of radioactive materials and hazardous chemicals, which resulted in contamination of soil, surface water, and groundwater. The environmental legacy of nuclear weapons production also includes thousands of contaminated buildings and large volumes of waste and special nuclear materials requiring treatment, stabilization, and disposal.

Estimated cleanup costs at sites for which there are no current feasible remediation approaches, such as the Nevada nuclear test site, are excluded from the estimates, although applicable stewardship and monitoring costs for these sites are included. DOE has not been required through regulation to establish remediation activities for these sites.

Estimating DOE's environmental cleanup liability requires making assumptions about future activities and is inherently uncertain. The future course of DOE's environmental cleanup and disposal will depend on a number of fundamental technical and policy choices, many of which have not been made. The sites and facilities could be restored to a condition suitable for any desirable use, or could be restored to a point where they pose no near-term health risks. Achieving the former conditions would have a higher cost but may (or may not) warrant the costs, or be legally required. The environmental and disposal liability estimates include contingency estimates intended to account for the uncertainties associated with the technical cleanup scope of the program.

DOE's environmental and disposal liabilities estimates are dependent on annual funding levels and achievement of work as scheduled. Congressional appropriations at lower than anticipated levels or unplanned delays in project completion would cause increases in life-cycle costs.

DOE's environmental and disposal liabilities also include the estimated cleanup and post-closure responsibilities, including surveillance and monitoring activities, soil and groundwater remediation, and disposition of excess material for sites. The Department is responsible for the post-closure activities at many of the closure sites as well as other sites. The costs for these post-closure activities are estimated for a period of 75 years after the balance sheet date, i.e., through 2092 in fiscal year 2017 and through 2091 in fiscal year 2016. While some post-cleanup monitoring and other long-term stewardship activities post-2092 are included in the liability, there are others the Department expects to continue beyond 2092 for which the costs cannot reasonably be estimated.

A portion of DOE's environmental and disposal liabilities at various field sites includes anticipated costs for facilities managed by DOE's ongoing program operations which will ultimately require stabilization, deactivation, and decommissioning. The estimate is largely based upon a cost-estimating model. Site specific estimates are used in lieu of the

cost-estimating model, when available. Cost estimates for ongoing program facilities are updated each year. For facilities newly contaminated since fiscal year 1997, cleanup costs allocated to future periods and not included in environmental and disposal liabilities amounted to \$0.9 billion and \$0.7 billion for fiscal years 2017 and 2016, respectively.

Please refer to the financial statements of the DOE for significant detailed information regarding DOE's environmental and disposal liabilities, including cleanup costs.

DOD must restore active installations, installations affected by base realignment and closure, and other areas formerly used as Defense sites. DOD also bears responsibility for disposal of chemical weapons and environmental costs associated with the disposal of weapons systems (primarily nuclear powered aircraft carriers and submarines).

DOD follows the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Superfund Amendments and Reauthorization Act, Resource Conservation and Recovery Act (RCRA) and other applicable federal or state laws to clean up contamination. The CERCLA and RCRA require the DOD to clean up contamination in coordination with regulatory agencies, current owners of property damaged by the Department, and third parties that have a partial responsibility for the environmental restoration. Failure to comply with agreements and legal mandates puts the DOD at risk of incurring fines and penalties.

DOD uses engineering estimates and independently validated models to estimate environmental costs. The engineering estimates are used after obtaining extensive data during the remedial investigation/feasibility phase of the environmental project.

For general PP&E placed into service after September 30, 1997, DOD expenses associated environmental costs systematically over the life of the asset using two methods: physical capacity for operating landfills and life expectancy in years for all other assets. DOD expenses the full cost to clean up contamination for stewardship property, plant, and equipment at the time the asset is placed into service. DOD has expensed the costs for cleanup associated with general property, plant, and equipment placed into service before October 1, 1997, except for costs intended to be recovered through user charges; for those costs, DOD has expensed cleanup costs associated with that portion of the asset life that has passed since it was placed into service. DOD systematically recognizes the remaining cost over the remaining life of the asset. DOD is unable to provide an estimate for the unrecognized portion of the cleanup cost associated with general property, plant, and equipment for fiscal year 2017. The Department is reevaluating its methodology and implementing procedures to address deficiencies. The unrecognized portion of the cleanup cost associated with general property, plant, and equipment for fiscal year 2016 is \$2.7 billion.

DOD is unable to estimate and report a liability for environmental restoration and corrective action for buried chemical munitions and agents, because the extent of the buried chemical munitions and agents is unknown at this time. DOD is also unable to provide a complete estimate for the Formerly Utilized Sites Remedial Action Program. DOD has ongoing studies and will update its estimate as additional liabilities are identified. DOD has the potential to incur costs for restoration initiatives in conjunction with returning overseas Defense facilities to host nations. However, DOD is unable to provide a reasonable estimate at this time because the extent of required restoration is unknown.

Please refer to the financial statements of DOD for further detailed information regarding DOD's environmental and disposal liabilities, including cleanup costs.

Note 14. Benefits Due and Payable

Benefits Due and Payable as of September 30, 2017, and 2016

(In billions of dollars)	2017	2016
Federal Old-Age and Survivors Insurance.....	71.3	69.1
Grants to States for Medicaid.....	34.1	35.4
Federal Supplementary Medical Insurance (Medicare Parts B and D).....	30.6	36.2
Federal Hospital Insurance (Medicare Part A).....	30.0	27.8
Federal Disability Insurance.....	26.9	28.1
All other benefits programs.....	25.9	21.6
Total benefits due and payable.....	<u>218.8</u>	<u>218.2</u>

Benefits due and payable are amounts owed to program recipients or medical service providers as of September 30 that have not been paid. HHS and the SSA administer the majority of the medical service programs. For a description of the programs, see Note 22—Social Insurance and the Unaudited Required Supplementary Information—Social Insurance section.

Note 15. Insurance and Guarantee Program Liabilities

Insurance and Guarantee Program Liabilities as of September 30, 2017, and 2016

(In billions of dollars)	2017	Restated 2016
Insurance and Guarantee Program Liabilities:		
Pension Benefit Guaranty Corporation - Benefit Pension Plans	178.6	174.7
Department of Homeland Security - National Flood Insurance Programs	12.3	3.2
Department of Agriculture - Federal Crop Insurance	11.3	8.9
National Credit Union Administration - Share Insurance Fund	0.3	0.2
Total insurance and guarantee program liabilities	<u>202.5</u>	<u>187.0</u>

As of September 30, 2017, and 2016, \$178.6 billion and \$174.7 billion, respectively, pertain to the PBGC single-employer and multiemployer pension plans. PBGC insures pension benefits for participants in covered defined benefit pension plans. As of September 30, 2017, and 2016, PBGC had total liabilities of \$184.4 billion and \$179.0 billion, and its total liabilities exceeded its total assets by \$76.0 billion and \$79.4 billion, respectively. Refer to PBGC's financial statements for more information. As a wholly-owned corporation of the government, PBGC's financial activity and balances are included in the consolidated financial statements of the government. Certain PBGC amounts have been restated. Refer to Note 1.V—Restatements for more information.

As of September 30, 2017, and 2016, \$12.3 billion and \$3.2 billion, respectively, pertain to the DHS National Flood Insurance Program. As a result of the major Hurricanes Harvey, Irma, and Maria in August and September 2017, and the related flooding, there was a significant increase in DHS's insurance liabilities.

As of September 30, 2017, and 2016, \$11.3 billion and \$8.9 billion, respectively, pertain to the USDA's Federal Crop Insurance Program. The Federal Crop Insurance Program is administered by the Federal Crop Insurance Corporation, whose mission is to provide an actuarially sound risk management program to reduce agricultural producers' economic losses due to natural disasters.

As of September 30, 2017, and 2016, \$0.3 billion and \$0.2 billion, respectively, pertain to the National Credit Union Administration's (NCUA) National Credit Union Share Insurance Fund (NCUSIF). The NCUSIF is administered by the NCUA, and protects members' accounts in insured credit unions in the event of a credit union failure.

Note 16. Other Liabilities

Other Liabilities as of September 30, 2017, and 2016	2017	Restated 2016
(In billions of dollars)		
Unearned revenue and assets held for others:		
Unearned fees for nuclear waste disposal (DOE) and other unearned revenue	60.0	54.4
Assets held on behalf of others	111.4	114.4
Subtotal	<u>171.4</u>	<u>168.8</u>
Employee-related liabilities:		
Accrued federal employees' wages and benefits	37.4	36.2
Selected DOE contractors' and D.C. employees' pension benefits	51.5	53.1
Subtotal	<u>88.9</u>	<u>89.3</u>
International monetary liabilities and gold certificates:		
Exchange Stabilization Fund	55.1	54.5
Gold certificates (see Note 2)	11.0	11.0
Subtotal	<u>66.1</u>	<u>65.5</u>
Subsidies and grants:		
Farm and other subsidies	13.2	13.5
Grant payments due to state and local governments and others	22.1	21.9
Subtotal	<u>35.3</u>	<u>35.4</u>
Miscellaneous liabilities:		
Legal and other contingencies	56.6	49.6
Non-federal power projects and capital lease liabilities, and disposal liabilities	12.1	11.0
Other miscellaneous	42.8	49.1
Subtotal	<u>111.5</u>	<u>109.7</u>
Total	<u><u>473.2</u></u>	<u><u>468.7</u></u>

Other liabilities represent liabilities that are not separately identified on the Balance Sheet and are presented on a comparative basis by major category.

Unearned Revenue and Assets Held for Others

The government recognizes a liability when it receives money in advance of providing goods and services or assumes custody of money belonging to others. The government's unearned revenue from fees DOE has collected from utility companies for the future cost of managing the disposal of nuclear waste and interest income received is about \$40.3 billion and \$38.8 billion as of September 30, 2017, and 2016, respectively. Other unearned revenue includes USPS income for such things as prepaid postage and prepaid P.O. Box rentals. Assets held on behalf of others include funds collected in advance for such things as outstanding postal money orders and undelivered Defense articles. DSCA holds \$85.6 billion and \$80.9 billion as of September 30, 2017, and 2016, respectively for articles and services for future delivery to foreign governments.

Employee-Related Liabilities

This category includes amounts owed to employees at year-end and actuarial liabilities for certain non-federal employees. Actuarial liabilities for federal employees and veteran benefits are included in Note 12—Federal Employee and Veteran Benefits Payable and are reported on another line on the Balance Sheet. The largest liability in the employee-related liabilities category is the amount owed at the end of the fiscal year to federal employees for wages and benefits (including accrued annual leave). In addition, DOE is liable to certain contractors for contractor employee pension and postretirement benefits, which is about \$23.1 billion and \$28.9 billion as of September 30, 2017 and 2016, respectively. Also, the government owed about \$8.7 billion and \$8.8 billion as of September 30, 2017, and 2016 respectively, for estimated future pension benefits of the District of Columbia's judges, police, firefighters, and teachers.

International Monetary Liabilities and Gold Certificates

Consistent with U.S. obligations in the IMF on orderly exchange arrangements and a stable system of exchange rates, the Secretary of the Treasury, with the approval of the President, may use the Exchange Stabilization Fund to deal in gold, foreign exchange, and other instruments of credit and securities.

Gold certificates are issued in nondefinitive or book-entry form to the Federal Reserve Bank of New York (FRBNY). The government's liability incurred by issuing the gold certificates, as reported on the Balance Sheet, is limited to the gold being held by the Department of the Treasury at the standard value established by law. Upon issuance of gold certificates to the FRBNY, the proceeds from the certificates are deposited into the operating cash of the U.S. Government. All of the Department of the Treasury's certificates issued are payable to the FRBNY.

Subsidies and Grants

The government supports the public good through a wide variety of subsidy and grant programs in such areas as agriculture, medical and scientific research, education, and transportation. USDA programs such as Conservation Reserve; grants, subsidies, and contributions; and Agricultural Risk Coverage and Price Loss Coverage account for the majority of the subsidies due, about \$12.1 billion and \$12.7 billion as of September 30, 2017 and 2016, respectively.

The government awards hundreds of billions of dollars in grants annually. These include project grants that are competitively awarded for agency-specific projects, such as HHS grants to fund projects to "enhance the independence, productivity, integration, and inclusion into the community of people with developmental disabilities." Other grants are formula grants, such as matching grants. Formula grants go to state governments for such things as education and transportation programs. These grants are paid in accordance with distribution formulas that have been provided by law or administrative regulations. Of the total liability reported for grants as of September 30, 2017, and 2016, DOT, Education, and HHS collectively owed their grantees about \$17.4 billion and \$16.6 billion, respectively. Refer to the financial statements and footnotes of the respective agencies for additional information.

Miscellaneous Liabilities

Some of the more significant liabilities included in this category are for (1) legal and other contingencies (see Note 18—Contingencies), (2) Bonneville Power Administration liability to pay annual budgets of several power projects for its electrical generating capacity, and (3) payables due to the purchases of securities. Certain PBGC amounts have been restated. Refer to Note 1.V—Restatements for more information.

In addition, many federal agencies reported relatively small amounts of miscellaneous liabilities that are not otherwise classified.

Note 17. Collections and Refunds of Federal Revenue

Collections of Federal Tax Revenue for the Year Ended September 30, 2017

(In billions of dollars)	Federal Tax Revenue Collections	Tax Year to Which Collections Relate			
		2017	2016	2015	Prior Years
Individual income tax and tax withholdings	2,976.3	1,930.0	988.6	32.3	25.4
Corporation income taxes	338.6	218.6	108.9	1.8	9.3
Excise taxes	89.4	66.7	22.5	-	0.2
Unemployment taxes	44.2	31.4	12.7	-	0.1
Customs duties	34.9	34.9	-	-	-
Estate and gift taxes	23.8	0.2	20.9	1.0	1.7
Railroad retirement taxes	6.0	4.6	1.4	-	-
Fines, penalties, interest, and other revenue	6.6	6.5	0.1	-	-
Subtotal	<u>3,519.8</u>	<u>2,292.9</u>	<u>1,155.1</u>	<u>35.1</u>	<u>36.7</u>
Less: amounts collected for non-federal entities	<u>(0.4)</u>				
Total	<u><u>3,519.4</u></u>				

Treasury is the Government's principal revenue-collecting agency. Collections of individual income and tax withholdings include FICA/SECA and individual income taxes. These taxes are characterized as non-exchange revenue.

Excise taxes, also characterized as non-exchange revenue, consist of taxes collected for various items, such as airline tickets, gasoline products, distilled spirits and imported liquor, tobacco, firearms, and others.

Federal Tax Refunds Disbursed for the Year Ended September 30, 2017

(In billions of dollars)	Refunds Disbursed	Tax Year to Which Refunds Relate			
		2017	2016	2015	Prior Years
Individual income tax and tax withholdings	389.2	46.3	306.4	27.8	8.7
Corporation income taxes	44.9	5.2	14.4	7.8	17.5
Excise taxes	2.1	0.4	1.0	0.2	0.5
Unemployment taxes	0.1	-	0.1	-	-
Customs duties	1.7	1.1	0.3	0.1	0.2
Estate and gift taxes	1.1	-	0.2	0.4	0.5
Total	<u>439.1</u>	<u>53.0</u>	<u>322.4</u>	<u>36.3</u>	<u>27.4</u>

Reconciliation of Revenue to Tax Collections for the Year Ended September 30, 2017, and 2016

(In billions of dollars)	2017	2016
Consolidated revenue per the Statement of Operations and Changes in Net Position	3,374.6	3,345.3
Tax refunds	439.1	428.3
Earned income tax and child tax credit imputed revenue	(79.1)	(80.8)
Other tax credits and accrual adjustments	(49.0)	(41.0)
Federal Insurance Contributions Act - Tax	21.9	21.2
Federal Reserve earnings	(81.3)	(115.7)
Nontax-related fines and penalties reported by agencies	(78.4)	(100.3)
Nontax-related earned revenue.....	(28.4)	(18.2)
Collections of federal tax revenue	<u>3,519.4</u>	<u>3,438.8</u>

Consolidated revenue in the SOCNP is presented on a modified cash basis, net of tax refunds, and includes other non-tax related revenue. Earned Income Tax Credit, Child Tax Credit, and other tax credits amounts (unaudited) are included in gross cost in the Statements of Net Cost. The Federal Insurance Contributions Act – Tax is included in the Individual income and tax withholdings line in the Collections of Federal tax revenue; however, it is not reported on the SOCNP as these collections are intragovernmental revenue and eliminated in consolidation. The table above reconciles total revenue to federal tax collections.

Collections of Federal Revenue for the Year Ended September 30, 2016

(In billions of dollars)	Federal Tax Revenue Collections	Tax Year to Which Collections Relate			
		2016	2015	2014	Prior Years
Individual income tax and tax withholdings	2,874.9	1,833.5	982.9	32.8	25.7
Corporation income taxes.....	345.6	228.2	107.2	2.5	7.7
Excise taxes	101.8	78.6	23.0	0.1	0.1
Unemployment taxes	47.1	31.9	15.1	-	0.1
Customs duties.....	35.0	35.0	-	-	-
Estate and gift taxes	22.3	-	8.0	0.9	13.4
Railroad retirement taxes	5.9	4.5	1.4	-	-
Fines, penalties, interest and other revenue	6.6	6.5	0.1	-	-
Subtotal	<u>3,439.2</u>	<u>2,218.2</u>	<u>1,137.7</u>	<u>36.3</u>	<u>47.0</u>
Less: amounts collected for non- federal entities	<u>(0.4)</u>				
Total	<u>3,438.8</u>				

Federal Tax Refunds Disbursed for the Year Ended September 30, 2016

(In billions of dollars)	Refunds Disbursed	Tax Year to Which Refunds Relate			
		2016	2015	2014	Prior Years
Individual income tax and tax withholdings	372.3	37.0	300.7	26.5	8.1
Corporation income taxes.....	51.4	6.5	19.2	7.4	18.3
Excise taxes	1.5	0.2	0.6	0.4	0.3
Unemployment taxes	0.2	-	0.2	-	-
Customs duties.....	1.6	0.9	0.3	0.1	0.3
Estate and gift taxes	1.3	0.4	0.5	0.1	0.3
Total	<u>428.3</u>	<u>45.0</u>	<u>321.5</u>	<u>34.5</u>	<u>27.3</u>

Note 18. Contingencies

Financial Treatment of Loss Contingencies

Loss contingencies are existing conditions, situations, or set of circumstances involving uncertainty as to possible loss to an entity. The uncertainty will ultimately be resolved when one or more future events occur or fail to occur. The reporting of loss contingencies depends on the likelihood that a future event or events will confirm the loss or impairment of an asset or the incurrence of a liability. Terms used to assess the range for the likelihood of loss are probable, reasonably possible, and remote. Loss contingencies that are assessed as probable and measurable are accrued in the financial statements. Loss contingencies that are assessed to be at least reasonably possible are disclosed in this note and loss contingencies that are assessed as remote are not reported in the financial statements, nor disclosed in the notes. The following table provides criteria for how federal agencies are to account for loss contingencies, based on the likelihood of the loss and measurability.³

Likelihood of future outflow or other sacrifice of resources	Loss amount can be reasonably measured	Loss range can be reasonably measured	Loss amount or range cannot be reasonably measured
Probable Future confirming event(s) are more likely to occur than not. ⁴	Accrue the liability. Report on Balance Sheet and Statement of Net Cost.	Accrue liability of the best estimate or (if there is no best estimate) minimum amount in loss range, and disclose nature of contingency and range of estimated liability.	Disclose nature of contingency and include a statement that an estimate cannot be made.
Reasonably possible Possibility of future confirming event(s) occurring is more than remote and less than likely.	Disclose nature of contingency and estimated loss amount.	Disclose nature of contingency and estimated loss range.	Disclose nature of contingency and include a statement that an estimate cannot be made.
Remote Possibility of future event(s) occurring is slight.	No disclosure.	No disclosure.	No disclosure.

³ In addition, a third condition must be met to be a loss contingency: a past event or an exchange transaction must occur.

⁴ For loss contingencies related to litigation, probable is defined as the future confirming event or events are more likely than not to occur, with the exception of pending or threatened litigation and unasserted claims. For the pending or threatened litigation and unasserted claims, the future confirming event or events are likely to occur.

The Government is subject to loss contingencies that include insurance and litigation cases. These loss contingencies arise in the normal course of operations and their ultimate disposition is unknown. Based on information currently available, however, it is management's opinion that the expected outcome of these matters, individually or in the aggregate, will not have a material adverse effect on the financial statements, except for the insurance and litigation described in the following section, which could have a material adverse effect on the financial statements.

Insurance Contingencies

At the time an insurance policy is issued, a contingency arises. The contingency is the risk of loss assumed by the insurer, that is, the risk of loss from events that may occur during the term of the policy. The Government has insurance contingencies that are reasonably possible in the amount of \$253.1 billion as of September 30, 2017, and \$243.8 billion as of September 30, 2016. The major programs are identified below:

- PBGC reported \$252.2 billion and \$242.8 billion as of September 30, 2017, and 2016, respectively, for the estimated aggregate unfunded vested benefits exposure to the PBGC for private-sector single-employer and multiemployer defined benefit pension plans that are classified as a reasonably possible exposure to loss. This increase is primarily due to the decrease in the interest factors used for valuing liabilities for the single-employer program, while the multiemployer program experienced a decrease in liability due to the removal of certain plans that are no longer classified as reasonably possible. Please refer to the PBGC financial statements for further details.
- FDIC reported \$0.6 billion and \$0.7 billion as of September 30, 2017, and 2016, respectively, for identified additional risk in the financial services industry that could result in additional loss to the Deposit Insurance Fund (DIF) should potentially vulnerable insured institutions ultimately fail. Actual losses, if any, will largely depend on future economic and market conditions.

Deposit Insurance

Deposit insurance covers all types of deposit accounts such as checking, Negotiable Order of Withdrawal and savings accounts, money market deposit accounts, and certificates of deposit received at an insured bank, savings association, or credit union. The insurance covers the balance of each depositor's account and shares, dollar-for-dollar, up to the insurance limit, including principal and any accrued interest through the date of the insured financial institution's closing. As a result, the Government has the following exposure from federally-insured financial institutions:

- FDIC has estimated insured deposits of \$7,092.0 billion as of September 30, 2017, and \$6,822.9 billion as of September 30, 2016, for the DIF.
- National Credit Union Administration (NCUA) has estimated insured shares of \$1,080.9 billion as of September 30, 2017, and \$1,015.9 billion as of September 30, 2016, for the National Credit Union Share Insurance Fund.

Legal Contingencies

Legal contingencies as of September 30, 2017, and 2016, are summarized in the table below:

(In billions of dollars)	2017			2016		
	Accrued Liabilities ¹	Estimated Range of Loss for Certain Cases ²		Accrued Liabilities ¹	Estimated Range of Loss for Certain Cases ²	
		Lower End	Upper End		Lower End	Upper End
Legal contingencies:						
Probable	7.4	6.8	8.6	7.2	7.2	7.9
Reasonably possible.....	-	3.1	12.6	-	9.2	16.3

¹ Accrued liabilities are recorded and presented in the related line items of the Balance Sheet.

² Does not reflect the total range of loss; many cases assessed as reasonably possible of an unfavorable outcome did not include estimated losses that could be determined.

The Government is party to various administrative claims and legal actions brought against it, some of which may ultimately result in settlements or decisions against the Government.

Management and legal counsel have determined that it is “probable” that some of these actions will result in a loss to the Government and the loss amounts are reasonably measurable. The estimated liabilities for “probable” cases against the government are \$7.4 billion and \$7.2 billion as of September 30, 2017, and 2016, respectively, and are included in “Other Liabilities” on the Balance Sheet. For example, the U.S. Supreme Court decision in *Salazar v. Ramah Navajo Chapter*, dated June 18, 2012, is likely to result in additional claims against the Indian Health Service (IHS), which is a component within HHS. As a result of this decision, many tribes have filed claims. Some claims have been settled and others have been asserted but not yet settled.

There are also administrative claims and legal actions pending where adverse decisions are considered by management and legal counsel as “reasonably possible” with an estimate of potential loss or a range of potential loss. The estimated potential losses reported for such claims and actions range from \$3.1 billion to \$12.6 billion as of September 30, 2017, and from \$9.2 billion to \$16.3 billion as of September 30, 2016. For example, the Department of the Treasury’s *American Recovery and Reinvestment Tax Act of 2009 (ARRA) Related Cases* are a number of cases that were filed in the U.S. Court of Federal Claims alleging that the U.S. government violated statutory and regulatory mandates to make proper payments to plaintiffs under ARRA, Section 1603, for having placed certain energy properties into service. The Department has determined there is a reasonably possible likelihood of unfavorable outcomes in some of the cases.

Numerous litigation cases are pending where the outcome is uncertain or it is reasonably possible that a loss has been incurred and where estimates cannot be made. There are other litigation cases where the plaintiffs have not made claims for specific dollar amounts, but the settlement may be significant. The ultimate resolution of these legal actions for which the potential loss could not be determined may materially affect the U.S. government’s financial position or operating results. An example of a specific case is summarized below:

- In the case, *Starr International Co., Inc. v. United States*, the plaintiff, an American International Group, Inc. (AIG) shareholder that brought suit on behalf of two classes of shareholders, alleges that the U.S. government violated the Fifth Amendment to the United States Constitution by illegally exacting or taking property without just compensation. One class, the Credit Agreement Class, claimed that the Fifth Amendment was violated when a majority share of AIG’s equity and voting rights was conveyed in connection with an \$85 billion loan to AIG during the 2008 financial crisis. Starr also asserted a Fifth Amendment violation on behalf of the second class, the Reverse Stock Split Shareholder Class, alleging that a June 2009 reverse split of AIG’s common stock constituted a taking of the common stockholders’ asserted right to a shareholder vote on whether to approve a reverse split of AIG’s common stock. The U.S. Court of Federal Claims held that the Credit Agreement Shareholder Class prevails on liability, but recovers no damages, and that the Reverse Stock Split Shareholder class does not prevail on liability or damages. On appeal, the U.S. Court of Appeals for the Federal Circuit overturned the lower court’s finding with respect to the Credit Agreement Shareholder Class and held that the plaintiff did not have standing to bring the

illegal exaction claim, since equity-acquisition claims belong exclusively to AIG and not to its shareholders. (AIG's board of directors declined to pursue any claims against the Government in a unanimous vote in January 2013.) The Federal Circuit also affirmed the trial court's ruling on the reverse stock split claim. On October 6, 2017, the plaintiff petitioned the Supreme Court for a writ of certiorari. The Government is unable to determine the likelihood of an unfavorable outcome or make an estimate of potential loss at this time.

Environmental and Disposal Contingencies

Environmental and disposal contingencies as of September 30, 2017, and 2016, are summarized in the table below:

(In billions of dollars)	2017			2016		
	Accrued Liabilities ¹	Estimated Range of Loss for Certain Cases ²		Accrued Liabilities ¹	Estimated Range of Loss for Certain Cases ²	
		Lower End	Upper End		Lower End	Upper End
Environmental and disposal contingencies:						
Probable	28.4	27.7	29.5	25.9	25.8	25.9
Reasonably possible	-	0.7	1.5	-	0.7	1.8
¹ Accrued liabilities are recorded and presented in the related line items of the Balance Sheet.						
² Does not reflect the total range of loss; many cases assessed as reasonably possible of an unfavorable outcome did not include estimated losses that could be determined.						

The Government is subject to loss contingencies for a variety of environmental cleanup costs for the storage and disposal of hazardous material as well as the operations and closures of facilities at which environmental contamination may be present.

Management and legal counsel have determined that it is "probable" that some of these actions will result in a loss to the Government and the loss amounts are reasonably measurable. The estimated liabilities for these cases are \$28.4 billion and \$25.9 billion as of September 30, 2017, and 2016, respectively, and are included in "Other Liabilities" on the Balance Sheet.

In accordance with the *Nuclear Waste Policy Act of 1982* (NWPA), DOE entered into more than 68 standard contracts with utilities in return for payment of fees established by the NWPA into the Nuclear Waste Fund. DOE agreed to begin disposal of spent nuclear fuel (SNF) by January 31, 1998. Because DOE has no facility available to receive SNF under the NWPA, it has been unable to begin disposal of the utilities' SNF as required by the contracts. Therefore, DOE is subject to SNF litigation for damages suffered by all utilities as a result of the delay in beginning disposal of SNF and also damages for alleged exposure to radioactive and/or toxic substances. Significant claims for partial breach of contract and a large number of class action and/or multiple plaintiff tort suits have been filed with estimated liability amounts of \$26.7 billion and \$24.7 billion as of September 30, 2017, and 2016, respectively.

Other Contingencies

DOT, HHS, and Treasury reported the following other contingencies:

- The Federal Highway Administration (FHWA) preauthorizes states to establish construction budgets without having received appropriations from Congress for such projects. FHWA has authority to approve projects using advance construction under 23 U.S.C. 115(a). FHWA does not guarantee the ultimate funding to the states for these "advance construction" projects and does not obligate any funds for these projects. When funding becomes available to FHWA, the states can then apply for reimbursement of costs that they have incurred on such projects, at which time FHWA can accept or reject such requests. FHWA has pre-authorized \$55.2 billion and \$50.6 billion to the states to establish budgets for its construction projects for fiscal years ending September 30, 2017, and 2016, respectively. Congress has not provided appropriations for these projects and no liability is accrued in the DOT consolidated financial statements.

- Contingent liabilities have been accrued as a result of Medicaid audit and program disallowances that are currently being appealed by the states and for reimbursement of state plan amendments. The Medicaid amounts are \$12.2 billion and \$10.2 billion for fiscal years ending September 30, 2017, and 2016, respectively. In all cases, the funds have been returned to HHS. If the appeals are decided in favor of the states, HHS will be required to pay these amounts. In addition, certain amounts for payment have been deferred under the Medicaid program when there is reasonable doubt as to the legitimacy of expenditures claimed by a state. There are also outstanding reviews of the state expenditures in which a final determination has not been made.
- Through an annual process, Treasury assesses the need for an estimated contingent liability that reflects the forecasted equity deficits of the GSEs. Based on this assessment, no accrued contingent liability was recorded for fiscal years 2017 and 2016. However, the reduction in U.S. corporate tax rate resulting from the enactment of the *Tax Cuts and Jobs Act* on December 22, 2017, required that each of Fannie Mae and Freddie Mac record a reduction in the value of their deferred tax assets in the quarter in which the legislation was enacted, impacting potential future funding draws. The funding draws and the associated amounts are expected to be realized in March 2018. See Note 8—Investments in Government-Sponsored Enterprises for further information.

Treaties

The Government is a party to treaties and other international agreements. These treaties and other international agreements address various issues including, but not limited to, trade, commerce, security, and law enforcement that may involve financial obligations or give rise to possible exposure to losses. Treaties and other international agreements fall into three broad categories: (1) no commitment to spend money; (2) commitment to spend money; or (3) potential obligation to spend money. A review must be conducted of potential contingent liabilities arising from litigation related to treaties and other international agreements. This review, along with any resulting relevant information, is captured and reported in the annual legal representation letter process. Refer to the Legal Contingencies section of this note for further information. It has been confirmed that the relevant financial obligations are included in the applicable financial statements and notes for the commitment to spend money and the potential obligation to spend money categories. The final category of no commitment to spend money will continue to be analyzed to confirm that all material financial obligations or possible loss exposures are properly reported in the *Financial Report*.

Note 19. Commitments

Long-Term Operating Leases as of September 30, 2017, and 2016

(In billions of dollars)	2017	2016
General Services Administration	22.4	23.1
U.S. Postal Service	7.6	7.4
Department of State	1.6	1.6
Department of Health and Human Services	1.0	1.0
Other operating leases	4.5	5.1
Total long-term operating leases	<u>37.1</u>	<u>38.2</u>

The government has entered into contractual commitments that require future use of financial resources. It has significant amounts of long-term lease obligations and undelivered orders. Undelivered orders represent the value of goods and services ordered that have not yet been received.

The government has other commitments that may require future use of financial resources. For example, the government has callable subscriptions in certain Multilateral Development Banks (MDBs), which are international financial institutions that finance economic and social development projects in developing countries. Callable capital in the MDBs serves as a supplemental pool of resources that may be redeemed and converted into ordinary paid in shares, if the MDB cannot otherwise meet certain obligations through its other available resources. MDBs are able to use callable capital as backing to obtain favorable financing terms when borrowing from international capital markets. To date, there has never been a call on this capital at any MDBs and none is anticipated.

Undelivered Orders and Other Commitments as of September 30, 2017, and 2016

(In billions of dollars)

	2017	2016
Undelivered Orders:		
Department of Defense	263.8	239.6
Defense Security Cooperation Agency	140.8	130.0
Department of Education	128.1	123.4
Department of Health and Human Services	114.2	96.1
Department of Transportation	103.7	105.9
Department of Agriculture	62.0	52.4
Department of Housing and Urban Development	39.1	35.1
Department of Homeland Security	37.9	35.7
Department of Energy	22.8	22.2
Department of State	21.8	21.6
Agency for International Development	17.9	17.6
All other agencies	112.1	91.6
Total undelivered orders	<u>1,064.2</u>	<u>971.2</u>
Other Commitments:		
GSE Senior Preferred Stock Purchase Agreements	258.1	258.1
U.S. Participation in the International Monetary Fund	157.0	155.1
Callable Capital Subscriptions for Multilateral Development Banks	120.6	120.0
All other commitments	19.2	16.7
Total other commitments	<u>554.9</u>	<u>549.9</u>

Other Commitments and Risks

Undelivered Orders

DOD reported undelivered orders of \$263.8 billion and \$239.6 billion as of September 30, 2017, and 2016, respectively. The increase of \$24.2 billion in fiscal year 2017 was primarily caused by increased estimates in non-federal undelivered orders.

Commitments to GSEs

At September 30, 2017 and 2016, the maximum remaining potential commitment to the GSEs for the remaining life of the SPSPAs was \$258.1 billion, which was established on December 31, 2012. Refer to Note 8—Investments in Government-Sponsored Enterprises for a full description of the SPSPAs related commitments and contingent liability, if any, as well as additional information.

Terrorism Risk Insurance Program

Congress originally enacted the Terrorism Risk Insurance Act (TRIA) in November 2002 to address market disruptions resulting from terrorist attacks on September 11, 2001. Most recently, the Terrorism Risk Insurance Program Reauthorization Act of 2015 extended the Terrorism Risk Insurance Program (TRIP) until December 31, 2020. The TRIP helps to ensure available and affordable commercial property and casualty insurance for terrorism risk, and simultaneously allows private markets to stabilize. The authority to pay claims under the TRIP Program is activated when the Secretary of the Treasury (in consultation with the Secretary of the U.S. Department of Homeland Security and the U.S. Attorney General) certifies an “act of terrorism.” In the event of certification of an “act of terrorism” insurers may be eligible to receive reimbursement from the U.S. government for associated insured losses assuming an aggregate insured loss threshold (“program trigger”) has been reached once a particular insurer has satisfied its designated deductible amount. For calendar years 2017 and 2016, the program trigger amount was \$140 million and \$120 million, respectively. This amount will increase by \$20 million annually through calendar year 2020. Insured losses above insurer deductibles will be shared between insurance companies and the U.S. government. The TRIP includes both mandatory and discretionary authority for the Department of the Treasury to recoup federal payments made under the TRIP through policyholder surcharges under certain circumstances, and contains provisions designed to manage litigation arising from or relating to a certified act of terrorism. There were no claims under the TRIP as of September 30, 2017 or 2016.

Note 20. Funds from Dedicated Collections

Funds from Dedicated Collections as of September 30, 2017¹

¹ By law, certain expenses (costs), revenues, and other financing sources related to the administration of the above funds are not charged to the funds and are therefore financed and/or credited to other sources.

Generally, funds from dedicated collections are financed by specifically identified revenues, often supplemented by other financing sources, provided to the government by non-federal sources, which remain available over time. These specifically identified revenues and other financing sources are required by statute to be used for designated activities, benefits, or purposes and must be accounted for separately from the government's general revenues. Funds from dedicated collections generally include trust funds, public enterprise revolving funds (not including credit reform financing funds), and

special funds. Funds from dedicated collections specifically exclude any fund established to account for pensions, other retirement benefits, other postemployment or other benefits provided for federal employees (civilian and military). In the federal budget, the term “trust fund” means only that the law requires a particular fund be accounted for separately, used only for a specified purpose, and designated as a trust fund. A change in law may change the future receipts and the terms under which the fund’s resources are spent. In the private sector, trust fund refers to funds of one party held and managed by a second party (the trustee) in a fiduciary capacity. The activity of funds from dedicated collections differs from fiduciary activities primarily in that assets within funds from dedicated collections are government-owned. For further information related to fiduciary activities, see Note 21—Fiduciary Activities.

Public enterprise revolving funds include expenditure accounts authorized by law to be credited with offsetting collections, mostly from the public, that are generated by and dedicated to finance a continuing cycle of business-type operations. Some of the financing for these funds may be from appropriations.

Special funds are federal funds dedicated by law for a specific purpose. Special funds include the special fund receipt account and the special fund expenditure account.

The tables above depict major funds from dedicated collections chosen based on their significant financial activity and importance to taxpayers. All other government funds from dedicated collections not shown separately are aggregated as “all other.”

Total assets represent the unexpended balance from all sources of receipts and amounts due to the funds from dedicated collections, regardless of source, including related governmental transactions. These are transactions between two different entities within the government (for example, monies received by one entity of the government from another entity of the government).

The intragovernmental assets are comprised of fund balances with Treasury, investments in Treasury securities—including unamortized amounts, and other assets that include the related accrued interest receivable on federal investments. These amounts were eliminated in preparing the principal financial statements. The non-federal assets represent only the activity with individuals and organizations outside of the government.

Most of the assets within funds from dedicated collections are invested in intragovernmental debt holdings. The government does not set aside assets to pay future benefits or other expenditures associated with funds from dedicated collections. The cash receipts collected from the public for funds from dedicated collections are deposited in the General Fund, which uses the cash for general government purposes. Treasury securities are issued to federal agencies as evidence of its receipts. Treasury securities are an asset to the federal agencies and a liability to the U.S. Treasury and, therefore, they do not represent an asset or a liability in the *Financial Report*. These securities require redemption if a fund’s disbursements exceeds its receipts. Redeeming these securities will increase the government’s financing needs and require more borrowing from the public (or less repayment of debt), or will result in higher taxes than otherwise would have been needed, or less spending on other programs than otherwise would have occurred, or some combination thereof. See Note 11—Federal Debt Securities Held by the Public and Accrued Interest for further information related to the investments in federal debt securities.

Depicted below is a description of the major funds from dedicated collections shown in the above tables, which also identifies the government agencies that administer each particular fund. For detailed information regarding these funds from dedicated collections, please refer to the financial statements of the corresponding administering agencies. For information on the benefits due and payable liability associated with certain funds from dedicated collections, see Note 14—Benefits Due and Payable.

Federal Old-Age and Survivors Insurance Trust Fund

The Federal Old-Age and Survivors Insurance Trust Fund, administered by the SSA, provides retirement and survivors benefits to qualified workers and their families.

Payroll and self-employment taxes primarily fund the Federal Old-Age and Survivors Insurance Trust Fund. Interest earnings on Treasury securities, federal agencies’ payments for the Social Security benefits earned by military and federal civilian employees, and Treasury payments for a portion of income taxes collected on Social Security benefits provide the fund with additional income. The law establishing the Federal Old-Age and Survivors Insurance Trust Fund and authorizing the depositing of amounts to the credit of the fund is set forth in 42 U.S.C. § 401.

Federal Hospital Insurance Trust Fund (Medicare Part A)

The Federal Hospital Insurance Trust Fund, administered by HHS, finances the Hospital Insurance Program (Medicare Part A). This program funds the cost of inpatient hospital and related care for individuals age 65 or older who meet certain insured status requirements, and eligible disabled people.

The Federal Hospital Insurance Trust Fund is financed primarily by payroll taxes, including those paid by federal agencies. It also receives income from interest earnings on Treasury securities, a portion of income taxes collected on Social Security benefits, premiums paid by, or on behalf of, aged uninsured beneficiaries, and receipts from fraud and abuse control activities. Section 1817 of the *Social Security Act* established the Medicare Hospital Trust Fund.

Federal Disability Insurance Trust Fund

The Federal Disability Insurance Trust Fund provides assistance and protection against the loss of earnings due to a wage earner's disability in form of monetary payments. The SSA administers this fund.

Like the Federal Old-Age and Survivors Insurance Trust Fund, payroll taxes primarily fund the Federal Disability Insurance Trust Fund. The fund also receives income from interest earnings on Treasury securities, federal agencies' payments for the Social Security benefits earned by military and federal civilian employees, and Treasury payments for a portion of income taxes collected on Social Security benefits. The law establishing the Federal Disability Insurance Trust Fund and authorizing the depositing of amounts to the credit of the fund is set forth in 42 U.S.C. § 401.

Federal Supplementary Medical Insurance Trust Fund (Medicare Parts B and D)

The Federal Supplementary Medical Insurance Trust Fund, administered by HHS, finances the Supplementary Medical Insurance Program (Medicare Part B) and the Medicare Prescription Drug Benefit Program (Medicare Part D). These programs provide supplementary medical insurance for enrolled eligible participants to cover physician and outpatient services not covered by Medicare Part A and to obtain qualified prescription drug coverage, respectively. Medicare Part B financing is not based on payroll taxes; it is primarily based on monthly premiums, income from the General Fund, and interest earnings on Treasury securities. Medicare Supplementary Medical Insurance Trust Fund was established by Section 1841 of the *Social Security Act*.

Medicare Part D was created by the *Medicare Modernization Act of 2003* (P.L. No. 108-173). Medicare Part D financing is similar to Part B; it is primarily based on monthly premiums and income from the General Fund, not on payroll taxes. The fund also receives transfers from States.

All Other Funds from Dedicated Collections

The government is responsible for the management of numerous funds from dedicated collections that serve a wide variety of purposes. The funds from dedicated collections presented on an individual basis in the above tables represent the majority of the government's net position attributable to funds from dedicated collections. All other activity attributable to funds from dedicated collections is aggregated in accordance with SFFAS No. 27, *Identifying and Reporting Funds from Dedicated Collections*, as amended by SFFAS No. 43, *Funds from Dedicated Collections: Amending Statement of Federal Financial Accounting Standards 27, Identifying and Reporting Earmarked Funds*. The funds from dedicated collections within the "all other" aggregate, along with the agencies that administer them, include the following:

- Highway Trust Fund and Airport and Airway Trust Fund—administered by DOT.
- Unemployment Trust Fund (UTF) and Black Lung Disability Trust Fund (BLDTF)—administered by DOL.
- Land and Water Conservation Fund, Reclamation Fund, and Water and Related Resources Fund—administered by DOI.
- Exchange Stabilization Fund—administered by Treasury.

- National Flood Insurance Program—administered by DHS.
- Railroad Retirement Trust Fund—administered by RRB.
- Uranium Enrichment Decontamination and Decommissioning Fund—administered by DOE.
- Government National Mortgage Association—administered by HUD.
- Crime Victims Fund—administered by DOJ.
- Harbor Maintenance Trust Fund—administered by DOD.

In accordance with SFFAS No. 43, any funds established to account for pension, other retirement, or other post-employment benefits to civilian or military personnel are excluded from the reporting requirements related to funds from dedicated collections.

Gulf Coast Ecosystem Restoration Council and Department of Housing and Urban Development contributed to the \$0.2 billion in prior-period adjustments for fiscal year 2017.

Other Taxes and Miscellaneous Earned Income

Unemployment Taxes

The Unemployment Trust Fund (UTF), within the “all other” aggregate, represents all the unemployment tax revenues attributable to funds from dedicated collections shown on the consolidated Statement of Operations and Changes in Net Position.

UTF provides temporary assistance to workers who lose their jobs. The program is administered through a unique system of federal and state partnerships, established in federal law, but executed through conforming state laws by state officials. DOL administers the federal operations of the program.

Employer taxes provide the primary funding source for the UTF and constitute the largest portion of unemployment tax revenues attributable to funds from dedicated collections as shown on the consolidated Statement of Operations and Changes in Net Position. However, interest earnings on Treasury securities also provide income to the fund. For the years ending September 30, 2017, and 2016, UTF unemployment tax revenues were \$44.1 billion and \$46.9 billion, respectively. Appropriations have supplemented the fund’s income during periods of high and extended unemployment. UTF was established under the authority of Section 904 of the *Social Security Act of 1935*.

Excise Taxes

There are 11 funds from dedicated collections within the “all other” aggregate that represent all of the dedicated excise tax revenue attributable to funds from dedicated collections shown on the consolidated Statement of Operations and Changes in Net Position. The Highway Trust Fund and the Airport and Airway Trust Fund, combined, represents 90 percent of all dedicated excise tax revenues. Both of these funds are administered by the DOT. For more information, please refer to DOT’s financial statements.

The Highway Trust Fund was established to promote domestic interstate transportation and to move people and goods. The fund provides federal grants to states for highway construction, certain transit programs, and related transportation purposes. The Highway Trust Fund was created by the *Highway Revenue Act of 1956*. Funding sources include designated excise taxes on gasoline and other fuels, the initial sale of heavy trucks, and highway use by commercial motor vehicles. For the years ending September 30, 2017, and 2016, Highway Trust Fund excise tax revenues were \$41.0 billion and \$41.3 billion, respectively. As funds are needed for payments, the Highway Trust Fund corpus investments are liquidated and funds are transferred to the Federal Highway Administration, the Federal Transit Administration, or other DOT entities, for payment of obligations.

The Airport and Airway Trust Fund provides for airport improvement and airport facilities maintenance. It also funds airport equipment, research, and a portion of the Federal Aviation Administration’s administrative operational support. The Airport and Airway Trust Fund was authorized by the *Airport and Airway Revenue Act of 1970*. Funding sources include aviation-related excise tax collections from:

- Passenger tickets,
- Passenger flight segments,
- International arrival/departures,
- Cargo waybills, and
- Aviation fuels.

For the years ending September 30, 2017, and 2016, Airport and Airway Trust Fund excise tax revenues were \$15.1 billion and \$14.4 billion, respectively.

Miscellaneous Earned Revenues

Miscellaneous earned revenues due to activity attributable to funds from dedicated collections primarily related to royalties retained by various funds within DOI.

Note 21. Fiduciary Activities

Fiduciary activities are the collection or receipt, and the management, protection, accounting, investment and disposition by the Government of cash or other assets in which non-federal individuals or entities have an ownership interest that the Government must uphold. Fiduciary cash and other assets are not assets of the Government and are not recognized on the consolidated Balance Sheet. Examples of the Government's fiduciary activities include the Thrift Savings Plan (TSP), which is administered by the Federal Retirement Thrift Investment Board (FRTIB), and the Indian Tribal and individual Indian Trust Funds, which are administered by the DOI.

Schedule of Fiduciary Net Assets as of September 30, 2017, and 2016

(In billions of dollars)	2017	2016
Thrift Savings Fund.....	531.5	472.1
Department of the Interior.....	5.2	5.1
All other	6.6	5.3
Total fiduciary net assets	<u>543.3</u>	<u>482.5</u>

In accordance with the requirements of SFFAS No. 31, *Accounting for Fiduciary Activities*, fiduciary investments in Treasury securities and fund balance with Treasury held by fiduciary funds are to be recognized on the Balance Sheet as debt held by the public and a liability for fiduciary fund balance with Treasury, respectively.

As of September 30, 2017, total fiduciary investments in Treasury securities and in non-Treasury securities are \$223.7 billion and \$317.9 billion, respectively. As of September 30, 2016, total fiduciary investments in Treasury securities and in non-Treasury securities were \$226.2 billion and \$268.9 billion, respectively. Refer to Note 11—Federal Debt Securities Held by the Public and Accrued Interest for more information on the Treasury securities.

As of September 30, 2017, and 2016, the total fiduciary fund balance with Treasury is \$1.2 billion and \$1.1 billion, respectively. A liability for this fiduciary fund balance with Treasury is reflected as other miscellaneous liabilities in Note 16—Other Liabilities.

As of September 30, 2017, and 2016, collectively, the fiduciary investments in Treasury securities and fiduciary fund balance with Treasury held by all Government entities represent \$7.0 billion and \$6.4 billion, respectively, of unrestricted cash included within cash held by Treasury for Governmentwide Operations shown in Note 2—Cash and Other Monetary Assets.

Thrift Savings Fund

The Thrift Savings Fund (TSF) maintains and holds in trust the assets of the TSP. The TSP is administered by an independent Government agency, the Federal Retirement Thrift Investment Board, which is charged with operating the TSP prudently and solely in the interest of the participants and their beneficiaries.

The TSP is a retirement savings and investment plan for federal employees and members of the uniformed services. It was authorized by the United States Congress in the *Federal Employees' Retirement System Act of 1986*. The Plan provides federal employees and members of the uniformed services with a savings and tax benefit similar to what many private sector employers offer their employees under 401(k) plans. The Plan was primarily designed to be a key part of the retirement package (along with a basic annuity benefit and Social Security) for employees who are covered by FERS.

Federal employees, who are participants of FERS, the CSRS, or equivalent retirement systems, as provided by statute, and members of the uniformed services, are eligible to join the Plan immediately upon being hired. Generally, FERS employees are those employees hired on or after January 1, 1984, while CSRS employees are employees hired before January 1, 1984, who have not elected to convert to FERS. Each group has different rules that govern contribution rates. As of December 31, 2016, and 2015, there were approximately 5.0 million and 4.8 million participants in the TSP, respectively, with approximately 3.3 million for both years contributing their own money. For further information about FRTIB and the TSP, please refer to the FRTIB website at <https://www.frtib.gov>.

As of September 30, 2017, and 2016, the TSF held \$531.5 billion and \$472.1 billion, respectively, in net assets, which included \$217.9 billion and \$220.9 billion, respectively, of U.S. Government Securities (amounts are unaudited). The most recent audited financial statements for the TSF are as of December 31, 2016, and 2015. As of December 31, 2016, and 2015, the TSF held \$483.3 billion and \$443.2 billion, respectively, in net assets, which included \$222.3 billion and \$206.9 billion, respectively, of U.S. Government Securities. These unaudited amounts above are included to enhance comparability of the TSF net assets with the remainder of the Government's fiduciary net assets as of September 30, 2017, and 2016.

DOI–Indian Trust Funds

As stated above, DOI has responsibility for the assets held in trust on behalf of American Indian Tribes and individuals, and these account for all of DOI's fiduciary net assets. DOI maintains accounts for Tribal and Other Trust Funds (including the Alaska Native Escrow Fund and Individual Indian Money Trust Funds) in accordance with the *American Indian Trust Fund Management Reform Act of 1994*. The fiduciary balances that have accumulated in these funds have resulted from land use agreements, royalties on natural resource depletion, other proceeds derived directly from trust resources, judgment awards, settlements of claims, and investment income. These funds are maintained for the benefit of individual Native Americans as well as for designated Indian tribes. DOI maintains separate financial statements for these trust funds which were prepared using the cash or modified cash basis of accounting, a comprehensive basis of accounting other than GAAP. The independent auditors' reports were qualified as it was not practical to extend audit procedures sufficiently to satisfy themselves as to the fairness of the trust fund balances. For further information related to these assets, please refer to the DOI website at <https://www.doi.gov>.

All Other Entities with Fiduciary Activities

The Government is responsible for the management of other fiduciary net assets on behalf of various non-federal entities. The component entities presented individually in the table on the previous page represent the vast majority of the Government's fiduciary net assets. All other component entities with fiduciary net assets are aggregated in accordance with SFFAS No. 31. As of September 30, 2017, and 2016, including TSF and DOI, there are a total of 20 and 20 federal entities, respectively, with fiduciary activities at a grand total of 67 and 68 fiduciary funds, respectively. SBA and LOC are the significant agencies relating to the fiduciary activities of the remaining component entities within the "all other" aggregate balance. As of September 30, 2017, "all other" fiduciary net assets were \$6.6 billion, compared to \$5.3 billion as of September 30, 2016.

Note 22. Social Insurance

The Statements of Social Insurance (SOSI) present the projected actuarial present value of the estimated future revenue and estimated future expenditures of the Social Security, Medicare, Railroad Retirement, and Black Lung social insurance programs which are administered by the SSA, HHS, RRB, and DOL, respectively. These estimates are based on the intermediate economic and demographic assumptions presented later in this note as set forth in the relevant Social Security and Medicare trustees' reports and in the agency financial reports of HHS, SSA, and DOL, as well as in the relevant agency performance and accountability report for RRB. Due to a change in the presentation of the consolidated SOSI and this note from billions of dollars to trillions of dollars beginning in fiscal year 2016, some amounts in the narrative will not be traceable to the corresponding agency financial statements. The SOSI projections, with one exception related to Medicare Part A and OASDI, are based on current law; that is, they assume that scheduled social insurance benefit payments would continue after related trust funds are projected to be depleted, contrary to current law. By law, once assets are exhausted, expenditures cannot be made except to the extent covered by ongoing tax receipts and other trust fund income. The estimates in the consolidated SOSI of the open group measures are for persons who are participants or eventually will participate in the programs as contributors (workers) or beneficiaries (retired workers, survivors, and disabled) during the 75-year projection period. To enhance comparability of the Black Lung Disability Trust Fund's (BLDTF) social insurance information and continue to illustrate the fund's long-term condition and sustainability, DOL revised its projection period from a fixed terminus of September 30, 2040 to a rolling 25-year projection period that begins on the September 30 valuation date each year. The revised projection period became effective for the September 30, 2017 valuation date.

Contributions and dedicated taxes consist of: payroll taxes from employers, employees, and self-employed persons; revenue from federal income taxation of Old-Age Survivors and Disability Insurance (OASDI) and railroad retirement benefits; excise tax on the domestic sale of coal (Black Lung); premiums from, and state transfers on behalf of, participants in Medicare; and reimbursements from the General Fund to the OASDI Trust Funds to make up for reductions in payroll tax revenue due to temporary payroll tax rate reductions. Income for all programs is presented from a consolidated perspective. Future interest payments and other future intragovernmental transfers have been excluded upon consolidation. Expenditures include benefit payments scheduled under current law and administrative expenses. Current Social Security and Medicare law provides for full benefit payments only to the extent that there are sufficient balances in the trust funds. Expenditures reflect full benefit payments even after the point at which assets are projected to be depleted.

Actuarial present values of estimated future income (excluding interest) and estimated future expenditures for the Social Security, Medicare, and Railroad Retirement social insurance programs are presented for three different groups of participants: (1) current participants who have not yet attained eligibility age; (2) current participants who have attained eligibility age; and (3) new entrants, who are expected to become participants in the future. Current participants in the Social Security and Medicare programs are the "closed group" of taxpayers and/or beneficiaries who are at least age 15 years at the start of the projection period. Since the projection period for the Social Security, Medicare, and Railroad Retirement social insurance programs consists of 75 years, the period covers virtually all of the current participants' working and retirement years, a period that could be greater than 75 years in a relatively small number of instances. Future participants for Social Security and Medicare include births during the projection period and individuals below age 15 as of January 1 of the valuation year. Railroad Retirement's future participants are the projected new entrants as of October 1 of the valuation year. For fiscal year 2015 and years prior, future participants for Railroad Retirement were the projected new entrants as of January 1 of the valuation year⁵.

The present values of estimated future expenditures in excess of estimated future revenue are calculated by subtracting the actuarial present values of future scheduled contributions as well as dedicated tax income by and on behalf of current and future participants from the actuarial present value of the future scheduled benefit payments to them or on their behalf. To determine a program's funding shortfall over any given period of time, the starting trust fund balance is subtracted from the present value of expenditures in excess of revenues over the period.

The trust fund balances as of the valuation date for the respective programs, including interest earned, are shown in the table below⁶. Substantially all of the Social Security (OASDI), Medicare Hospital Insurance (HI), and Supplementary Medical Insurance (SMI) Trust Fund balances consist of investments in special nonmarketable Treasury securities that are backed by the full faith and credit of the U.S. Government.

⁵ Beginning with the fiscal year 2016 reporting period, the valuation date for the Railroad Retirement program was changed from calendar year to fiscal year.

⁶ Trust fund balances for the Railroad Retirement and Black Lung programs are not included, as these balances are less than \$50 billion.

Social Insurance Programs Trust Fund Balances ¹

(In trillions of dollars)	2017	2016	2015	2014	2013
Social Security	2.8	2.8	2.8	2.8	2.7
Medicare	0.3	0.3	0.3	0.3	0.3

¹ As of the valuation date of the respective programs.

Social Security

The Federal Old-Age and Survivors Insurance (OASI) Trust Fund, established on January 1, 1940, and the Federal Disability Insurance (DI) Trust Fund, established on August 1, 1956, collectively referred to as OASDI or “Social Security,” provides cash benefits for eligible U.S. citizens and residents. Eligibility and benefit amounts are determined under the laws applicable for the period. Current law provides that the amount of the monthly benefit payments for workers and their eligible dependents or survivors is based on the workers’ lifetime earnings histories.

The primary financing of the OASDI Trust Funds are taxes paid by workers, their employers, and individuals with self-employment income, based on work covered by the OASDI Program. Refer to the Unaudited Required Supplementary Information—Social Insurance section for additional information on Social Security program financing.

That portion of each trust fund not required to pay benefits and administrative costs is invested, on a daily basis, in interest-bearing obligations of the U.S. Government. The *Social Security Act* authorizes the issuance by the Treasury of special nonmarketable, intragovernmental debt obligations for purchase exclusively by the trust funds. Although the special issues cannot be bought or sold in the open market, they are redeemable at any time at face value and thus bear no risk of fluctuation in principal value due to changes in market yield rates. Interest on the bonds is credited to the trust funds and becomes an asset to the funds and a liability to the General Fund. These Treasury securities and related interest are eliminated in consolidation at the governmentwide level.

Medicare

The Medicare Program, created in 1965, has two separate trust funds: the HI (Medicare Part A) and SMI (Medicare Parts B and D) Trust Funds. HI pays for inpatient acute hospital services, hospice, and major alternatives to hospitals (skilled nursing services, for example), and SMI pays for hospital outpatient services, physician services, and assorted other services and products through the Part B account and pays for prescription drugs through the Part D account. Though the events that trigger benefit payments are similar, HI and SMI have different dedicated financing structures. Similar to OASDI, HI is financed primarily by payroll contributions. Other income to the HI Trust Fund includes a small amount of premium income from voluntary enrollees, receipts from fraud and abuse control activities, a portion of the federal income taxes that beneficiaries pay on Social Security benefits and interest credited on Treasury securities held in the HI Trust Fund. These Treasury securities and related interest are eliminated in the consolidation at the governmentwide level.

For SMI, transfers from the General Fund represent the largest source of income for both Parts B and D. Generally, beneficiaries finance the remainder of Parts B and D costs via monthly premiums to these programs. With the introduction of Part D drug coverage, Medicaid is no longer the primary payer of drug costs for full-benefit dually eligible beneficiaries of Medicare and Medicaid. For those beneficiaries, states are subject to a contribution requirement and must pay a portion of their estimated foregone drug costs into the Part D account (referred to as state transfers). Fees related to brand-name prescription drugs, required by the *Affordable Care Act* (ACA), are included as income for Part B of SMI. As with HI, interest received on Treasury securities held in the SMI Trust Fund is credited to the fund and these Treasury securities as well as related interest are eliminated in consolidation at the governmentwide level. By accounting convention, the transfers of general revenues are eliminated in the consolidation of the SOSI at the governmentwide level and as such, the general revenues that are used to finance Medicare Parts B and D are not included in these calculations even though the expenditures on these programs are included. For the fiscal year 2017 and 2016 SOSI, the amounts eliminated totaled \$30.0 trillion and \$28.7 trillion, respectively. Refer to Unaudited Required Supplementary Information—Social Insurance section for additional information on Medicare program financing.

The financial projections for the Medicare program reflect substantial, but very uncertain, cost savings deriving from provisions of the *Patient Protection and Affordable Care Act* and the *Health Care and Education Reconciliation Act*,

collectively referred to as the *Affordable Care Act (ACA)*, and the *Medicare Access and CHIP Reauthorization Act of 2015 (MACRA)* that lowered increases in Medicare payment rates to most categories of health care providers.

The ACA became law in fiscal year 2010 and provided funding for the establishment by Centers for Medicare & Medicaid Services (CMS) of a Center for Medicare and Medicaid Innovation to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to individuals. It also allowed for the establishment of a Center for Consumer Information and Insurance Oversight (CCIIO). One of the main programs under CCIIO is the Affordable Insurance Exchanges (the “Exchanges”). A brief description of these programs is presented below.

Affordable Insurance Exchanges. Grants have been provided to the states to establish Affordable Insurance Exchanges. The initial grants were made by HHS to the states “not later than one year after the date of enactment.” Thus, HHS made the initial grants by March 23, 2011. Subsequent grants were issued by CMS through December 31, 2014, after which time no further grants could be made. All Exchanges were launched on October 1, 2013.

Transitional Reinsurance Program. The Transitional Reinsurance Program was established in each state to help stabilize premiums for coverage in the individual market from 2014 through 2016. All health insurance issuers and third party administrators, on behalf of self-insured group health plans, made contributions to support reinsurance payments that cover high-cost individuals in non-grandfathered plans in the individual market, inside and outside the Exchange.

Risk Adjustment Program. The Risk Adjustment Program is a permanent program. It applies to non-grandfathered individuals and small group plans inside and outside the Exchanges. It provides payments to health insurance issuers that disproportionately attract higher-risk populations (such as individuals with chronic conditions) and transfers funds from plans with relatively lower risk enrollees to plans with relatively higher risk enrollees to protect against adverse selection. States that operate a state-based Exchange are eligible to establish a risk adjustment program. States operating a risk adjustment program may have an entity other than the Exchange perform this function. CMS operates a risk adjustment program for each state that does not operate its own.

Risk Corridors Program. The temporary Risk Corridors Program operated for benefit years 2014 through 2016. This program applied to qualified health plans in the individual and small group markets, inside and outside the Exchanges and protected against inaccurate rate-setting by sharing risk (gains and losses) on allowable costs between CMS and qualified health plans.

It is important to note that the improved results for HI and SMI Part B since 2010 depend in part on the long-range feasibility of the various cost-saving measures in the ACA—most importantly, the reductions in the annual payment rate updates for most categories of Medicare providers by the growth in economy-wide private nonfarm business multifactor productivity and the specified physician updates put in place by MACRA. Without fundamental changes in the current delivery system, these productivity-related adjustments to Medicare payment rates would probably not be viable indefinitely. However, this outcome is achievable if health care providers are able to realize productivity improvements at a faster rate than experienced historically. On the other hand, if the health sector cannot transition to more efficient models of care delivery and achieve productivity increases commensurate with economy-wide productivity, and if the provider reimbursement rates paid by commercial insurers continue to be based on the same negotiated process used to date, then the availability and quality of health care received by Medicare beneficiaries would, under current law, fall over time compared to that received by those with private health insurance.

A transformation of health care in the United States, affecting both the means of delivery and the method of paying for care, is also a possibility. Private health insurance and Medicare take important steps in this direction by initiating programs of research into innovative payment and service delivery models, such as accountable care organizations, patient-centered medical homes, improvement in care coordination for individuals with multiple chronic health conditions, better coordination of post-acute care, payment bundling, pay for performance, and assistance for individuals in making informed health choices. Such changes have the potential to reduce health care costs as well as cost growth rates and could, as a result, help lower health care spending to levels compatible with the lower price updates payable under current law.

The ability of new delivery and payment methods to lower cost growth rates is uncertain at this time. Preliminary indications are that some of these delivery reforms have had modest levels of success in lowering costs, but at this time it is too early to tell if these reductions in spending will continue, or if they will grow to the magnitude needed to align with the statutory Medicare price updates. For those providers affected by the productivity adjustments and the specified updates to physician payments, sustaining the price reductions will be challenging, as the best available evidence indicates that most providers cannot improve their productivity to this degree for a prolonged period given the labor-intensive nature of these services and that physician costs will grow at a faster rate than the specified updates. As a result, actual Medicare expenditures are highly uncertain for reasons apart from the inherent difficulty in projecting health care cost growth over time.

Absent an unprecedented change in health care delivery systems and payment mechanisms, the prices paid by Medicare for most health services will fall increasingly short of the cost of providing such services. If this issue is not addressed by

subsequent legislation, it is likely that access to, and quality of, Medicare benefits would deteriorate over time for beneficiaries. The specified rate updates could be an issue in years when levels of inflation are high and would be problematic when the cumulative gap between the price updates and physician costs becomes large. The gap will continue to widen throughout the projection, and it is estimated that physician payment rates under current law will be lower than they would have been under the sustainable growth rate (SGR) formula by 2048. Absent a change in the delivery system or level of update by subsequent legislation, access to Medicare-participating physicians may become a significant issue in the long term under current law. Overriding the price updates in current law, as lawmakers repeatedly did in the case of physician payment rates, would lead to substantially higher costs for Medicare in the long range than those projected in this report.

To help illustrate and quantify the potential magnitude of the cost understatement, the Trustees asked the Office of the Actuary at CMS to prepare an illustrative Medicare Trust Fund projection under a hypothetical alternative that assumes that, starting in 2020, the economy-wide productivity adjustments gradually phase down to 0.4 percent, and starting in 2026, physician payments transition from a payment update of 0.6 percent to an increase of 2.2 percent. In addition, the illustrative alternative assumes the continuation of the 5-percent bonuses for physicians in advanced alternative payment models (APMs) and of the \$500 million payments for physicians in the merit-based incentive payment system (MIPS). In addition, the projection assumes that the Independent Payment Advisory Board (IPAB) requirements would not be implemented.⁷ This alternative was developed for illustrative purposes only; the calculations have not been audited; no endorsement of the policies underlying the illustrative alternative by the Trustees, CMS, or the Office of the Actuary should be inferred; and the examples do not attempt to portray likely or recommended future outcomes. Thus, the illustrations are useful only as general indicators of the substantial impacts that could result from future legislation affecting the productivity adjustments and physician updates under Medicare and of the broad range of uncertainty associated with such impacts. The table below contains a comparison of the Medicare 75-year present values of estimated future income and estimated future expenditures under current law with those under the illustrative alternative scenario.

⁷ The illustrative alternative projections included changes to the productivity adjustments starting with the 2010 annual report, following enactment of the *Affordable Care Act*. The assumption regarding physician payments is being used because the enactment of *MACRA* in 2015 replaced the SGR with specified physician updates.

Medicare Present Values (in trillions) (Unaudited)

	2017 Consolidated SOSI Current Law	Illustrative Alternative Scenario^{1, 2}
Income:		
Part A	\$21.7	\$21.9
Part B ³	\$8.4	\$10.6
Part D ⁴	\$3.1	\$3.2
Total income	<u>\$33.2</u>	<u>\$35.7</u>
Expenditures:		
Part A	\$25.3	\$31.5
Part B	\$30.8	\$38.7
Part D	\$10.8	\$10.9
Total expenditures	<u>\$66.9</u>	<u>\$81.1</u>
Income less expenditures:		
Part A	\$3.5	\$9.6
Part B	\$22.4	\$28.1
Part D	\$7.6	\$7.8
Excess of expenditures over income	<u>\$33.5</u>	<u>\$45.5</u>

¹These amounts are not presented in the 2017 Trustees' Report.

²At the request of the Trustees, the Office of the Actuary at CMS has prepared an illustrative set of Medicare Trust Fund projections that differ from current law. No endorsement of the illustrative alternative to current law by the Trustees, CMS, or the Office of the Actuary should be inferred.

³Excludes \$22.4 trillion and \$28.1 trillion of General Revenue Contributions from the 2017 Consolidated SOSI Current Law projection and the Illustrative Alternative Scenario's projection, respectively; i.e., to reflect Part B income on a consolidated governmentwide basis.

⁴Excludes \$7.6 trillion and \$7.8 trillion of General Revenue Contributions from the 2017 Consolidated SOSI Current Law projection and the Illustrative Alternative Scenario's projection, respectively; i.e., to reflect Part D income on a consolidated governmentwide basis.

Note: Totals may not equal the sum of components due to rounding.

The difference between the current-law and illustrative alternative projections is substantial for Parts A and B. All Part A fee-for-service providers and roughly half of Part B fee-for-service providers are affected by the productivity adjustments, so the current-law projections reflect an estimated 1.1 percent reduction in annual cost growth each year for these providers. If the productivity adjustments were gradually phased out, the physician updates transitioned to the Medicare Economic Index update of 2.2 percent, the 5-percent bonuses paid to physicians in APMs did not expire, and the IPAB requirements were not implemented, as illustrated under the alternative scenario, the estimated present values of Part A and Part B expenditures would each be higher than the current-law projections by roughly 25 and 26 percent, respectively. As indicated above, the present value of Part A income is basically unaffected under the alternative scenario.

The Part D values are similar under each projection because the services are not affected by the productivity adjustments or the physician updates. The very minor effect is the result of the removal of the IPAB impact and a slight change in the discount rates that are used to calculate the present values.

The extent to which actual future Part A and Part B costs exceed the projected amounts due to changes to the productivity adjustments and physician updates depends on what specific changes might be legislated and whether Congress would pass further provisions to help offset such costs. As noted, these examples reflect only hypothetical changes to provider payment rates.

Social Security and Medicare—Demographic and Economic Assumptions

The Boards of Trustees⁸ of the OASDI and Medicare Trust Funds provide in their annual reports to Congress short-range (10-year) and long-range (75-year) actuarial estimates of each trust fund. Because of the inherent uncertainty in estimates for 75 years into the future, the Boards use three alternative sets of economic and demographic assumptions to show a range of possibilities. Assumptions are made about many economic and demographic factors, including Gross Domestic Product (GDP)⁹, disability incidence and terminations, earnings, the Consumer Price Index (CPI), the unemployment rate, the fertility rate, immigration, mortality, and for the Medicare projections health care cost growth. The assumptions used for the most recent set of projections shown in Table 1A (Social Security) and Table 1B (Medicare) are generally referred to as the “intermediate assumptions,” and reflect the trustees’ reasonable estimate of expected future experience. For further information on Social Security and Medicare demographic and economic assumptions, refer to SSA’s and HHS’ Agency Financial Reports.

⁸ There are six trustees: the Secretaries of the Treasury (managing trustee), Health and Human Services, and Labor, the Commissioner of the Social Security Administration, and two public trustees who are generally appointed by the President and confirmed by the Senate for a 4-year term. By law, the public trustees are members of two different political parties.

⁹In July 2013, the Bureau of Economic Analysis (BEA) revised upward the historical values for GDP beginning with estimates for 1929.

Table 1A
Social Security – Demographic and Economic Assumptions

Demographic Assumptions						
Year	Total Fertility Rate ¹	Age-Sex Adjusted Death Rate (per 100,000) ²	Net Annual Immigration (persons per year) ³	Period Life Expectancy at Birth ⁴		
				Male	Female	
2017	1.90	772.1	1,559,000	77.0	81.6	
2020	1.98	750.2	1,512,000	77.4	81.9	
2030	2.00	686.1	1,332,000	78.6	82.9	
2040	2.00	630.8	1,282,000	79.7	83.8	
2050	2.00	582.3	1,257,000	80.7	84.6	
2060	2.00	539.7	1,243,000	81.7	85.4	
2070	2.00	502.0	1,234,000	82.5	86.1	
2080	2.00	468.6	1,229,000	83.4	86.8	
2090	2.00	438.7	1,227,000	84.1	87.4	

Economic Assumptions						
Year	Real Wage Differential (percent) ⁵	Average Annual Wage In Covered Employment (percent change) ⁶	CPI (percent change) ⁷	Real GDP (percent change) ⁸	Total Employment (percent change) ⁹	Average Annual Interest Rate (percent) ¹⁰
2020	1.87	4.47	2.60	2.9	1.0	4.6
2030	1.29	3.89	2.60	2.1	0.5	5.3
2040	1.21	3.81	2.60	2.2	0.6	5.3
2050	1.24	3.84	2.60	2.2	0.5	5.3
2060	1.21	3.81	2.60	2.1	0.4	5.3
2070	1.15	3.75	2.60	2.1	0.5	5.3
2080	1.13	3.73	2.60	2.1	0.5	5.3
2090	1.15	3.75	2.60	2.0	0.4	5.3

¹The total fertility rate for any year is the average number of children that would be born to a woman in her lifetime if she were to experience, at each age of her life, the birth rate observed in, or assumed for, the selected year, and if she were to survive the entire childbearing period.

²The age-sex-adjusted death rate is based on the enumerated total population as of April 1, 2010, if that population were to experience the death rates by age and sex observed in, or assumed for, the selected year. It is a summary measure and not a basic assumption; it summarizes the basic assumptions from which it is derived.

³Net annual immigration is the number of persons who enter during the year (both legally and otherwise) minus the number of persons who leave during the year. It is a summary measure and not a basic assumption; it summarizes the effects of the basic assumptions from which it is derived.

⁴The period life expectancy at a given age for a given year is the average remaining number of years expected prior to death for a person at that exact age, born on January 1, using the mortality rates for that year over the course of his or her remaining life. It is a summary measure and not a basic assumption; it summarizes the effects of the basic assumptions from which it is derived.

⁵The real-wage differential is the annual percentage change in the average annual wage in covered employment less the annual percentage change in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W). Values are rounded after all computations.

⁶The average annual wage in covered employment is the total amount of wages and salaries for all employment covered by the OASDI program in a year, divided by the number of employees with any such earnings during the year. It is a summary measure and not a basic assumption; it summarizes the basic assumptions from which it is derived.

⁷The CPI is the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W).

⁸The real GDP is the value of total output of goods and services in 2009 dollars. It is a summary measure and not a basic assumption; it summarizes the effects of the basic assumptions from which it is derived.

⁹Total employment is total U.S. military and civilian employment. It is a summary measure and not a basic assumption; it summarizes the basic assumptions from which it is derived.

¹⁰The average annual interest rate is the average of the nominal interest rates, which compound semiannually, for special public-debt obligations issuable to the OASI and DI Trust Funds in each of the 12 months of the year. It is a summary measure and not a basic assumption; it summarizes the basic assumptions from which it is derived.

**Table 1B
Medicare – Demographic and Economic Assumptions**

Demographic Assumptions								
Year	Total Fertility Rate ¹	Age-Sex Adjusted Death Rate (per 100,000) ²	Net Annual Immigration (persons per year) ³					
2017	1.90	772.1	1,559,000					
2020	1.98	750.2	1,512,000					
2030	2.00	686.1	1,332,000					
2040	2.00	630.8	1,282,000					
2050	2.00	582.3	1,257,000					
2060	2.00	539.7	1,243,000					
2070	2.00	502.0	1,234,000					
2080	2.00	468.6	1,229,000					
2090	2.00	438.7	1,227,000					

Economic Assumptions					Per Beneficiary Cost ⁸ (percent change)			
Year	Real Wage Differential (percent) ⁴	Average Annual Wage In Covered Employment (percent change) ⁵	CPI (percent change) ⁶	Real GDP (percent change) ⁷	SMI			Real Interest Rate (percent) ⁹
					HI	Part B	Part D	
2017	1.84	4.00	2.17	2.9	0.5	3.1	(0.2)	(0.3)
2020	1.87	4.47	2.60	2.9	4.1	5.1	5.4	1.7
2030	1.29	3.89	2.60	2.1	3.8	4.8	4.5	2.7
2040	1.21	3.81	2.60	2.2	4.6	4.2	4.7	2.7
2050	1.24	3.84	2.60	2.2	3.8	3.7	4.7	2.7
2060	1.21	3.81	2.60	2.1	3.6	3.6	4.5	2.7
2070	1.15	3.75	2.60	2.1	3.8	3.6	4.4	2.7
2080	1.13	3.73	2.60	2.1	3.8	3.6	4.4	2.7
2090	1.15	3.75	2.60	2.0	3.4	3.4	4.3	2.7

¹The total fertility rate for any year is the average number of children that would be born to a woman in her lifetime if she were to experience, at each age of her life, the birth rate observed in, or assumed for, the selected year, and if she were to survive the entire childbearing period.

²The age-sex-adjusted death rate is based on the enumerated total population as of April 1, 2010, if that population were to experience the death rates by age and sex observed in, or assumed for, the selected year. It is a summary measure and not a basic assumption; it summarizes the basic assumptions from which it is derived.

³Net annual immigration is the number of persons who enter during the year (both legally and otherwise) less the number of persons who leave during the year. It is a summary measure and not a basic assumption; it summarizes the effects of the basic assumptions from which it is derived.

⁴The real-wage differential is the annual percentage change in the average annual wage in covered employment less the annual percentage change in CPI. Values are rounded after computations.

⁵The average annual wage in covered employment is the total amount of wages and salaries for all employment covered by the OASDI program in a year, divided by the number of employees with any such earnings during the year. It is a summary measure and not a basic assumption; it summarizes the basic assumptions from which it is derived.

⁶The CPI is the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W).

⁷The real GDP is the value of total output of goods and services produced in the U.S. in 2009 dollars. It is a summary measure and not a basic assumption; it summarizes the effects of the basic assumptions from which it is derived.

⁸These increases reflect the overall impact of more detailed assumptions that are made for each of the different types of service provided by the Medicare program (for example, hospital care, physician services, and pharmaceutical costs). These assumptions include changes in the payment rates, utilization, and intensity of each type of service.

⁹The real interest rate is the average rate of interest earned on new trust fund securities, above and beyond the rate of inflation.

Railroad Retirement

The Railroad Retirement and Survivor Benefit program pays full retirement annuities at age 60 to railroad workers with 30 years of service. The program pays disability annuities based on total or occupational disability. It also pays annuities to spouses and divorced spouses of retired workers and to widow(er)s, surviving divorced spouses, remarried widow(er)s, children, and parents of deceased railroad workers. Medicare covers qualified railroad retirement beneficiaries in the same way as it does Social Security beneficiaries.

The RRB and the SSA share jurisdiction over the payment of retirement and survivor benefits. The RRB has jurisdiction over the payment of retirement benefits if the employee has at least 10 years of railroad service, or five years if performed after 1995. For survivor benefits, RRB requires that the employee's last regular employment before retirement or death be in the railroad industry. If a railroad employee or his or her survivors do not qualify for railroad retirement benefits, the RRB transfers the employee's railroad retirement credits to SSA, where they are treated as social security credits.

Payroll taxes paid by railroad employers and their employees are a primary source of funding for the Railroad Retirement and Survivor Benefit Program. By law, railroad retirement taxes are coordinated with Social Security taxes. Employees and employers pay Tier I taxes at the same rate as Social Security taxes and Tier II taxes to finance railroad retirement benefit payments that are higher than Social Security levels.

Revenues in excess of benefit payments are invested to provide additional trust fund income. Legislation enacted in 2001 allowed for Railroad Retirement Account funds transferred to the National Railroad Retirement Investment Trust (NRRIT) to be invested in non-governmental assets, as well as in governmental securities. Funds transferred from the Social Security Equivalent Benefit (SSEB) Account to the NRRIT are allowed to be invested only in governmental securities.

Since its inception, NRRIT has received \$21.3 billion from RRB (including \$19.2 billion in fiscal year 2003, pursuant to the *Railroad Retirement and Survivors' Improvement Act of 2001*) and returned \$21.1 billion. During fiscal year 2017, the NRRIT made net transfers of \$1.8 billion to the RRB to pay retirement benefits. Administrative expenses of the trust are paid out of trust assets. The balance as of September 30, 2017, and 2016, of non-federal securities and investments of the NRRIT are disclosed in Note 7—Debt and Equity Securities.

Another major source of income to the Railroad Retirement and Survivor Benefit program consists of financial transactions with the Social Security and Medicare Trust Funds. The RRB, SSA, and CMS are parties to a financing arrangement, the "financial interchange", which is intended to put the OASDI and Medicare HI Trust Funds in the same positions they would have been had railroad employment been covered under the *Social Security and Federal Insurance Contributions Acts*.

Other sources of program income include revenue resulting from federal income taxes on railroad retirement benefits, and appropriations provided after 1974 as part of a phase out of certain vested dual benefits. From a governmentwide perspective, these future financial interchanges and transactions are intragovernmental transfers and are eliminated in consolidation.

The estimated future revenues and expenditures reflected in the SOSI are based on various economic, employment, and other actuarial assumptions, and assume that the Railroad Retirement program will continue as presently constructed. The calculations assume that all future transfers required by current law under the financial interchange will be made. For further details on actuarial assumptions related to the Railroad Retirement program and how these assumptions affect amounts presented on the SOSI and Statement of Changes in Social Insurance Amounts (SCSIA), consult the Technical Supplement to the *26th Actuarial Valuation of the Assets and Liabilities Under the Railroad Retirement Acts as of December 31, 2013*, the *Annual Report on the Railroad Retirement System Required by the Railroad Retirement Act of 1974* and *Railroad Retirement Solvency Act of 1983*, and RRB's financial statements.

Black Lung–Disability Benefit Program

The Black Lung Disability Benefit Program provides for compensation, medical, and survivor benefits for eligible coal miners who are totally disabled due to pneumoconiosis (black lung disease) arising out of their coal mine employment, and the BLDTF provides benefit payments when no responsible mine operator (RMO) can be assigned the liability or when the liability is adjudicated to the BLDTF, which may occur as a result of, among other things, bankruptcy of the RMO. DOL operates the Black Lung Disability Benefit Program.

Black lung disability benefit payments are funded by excise taxes from coal mine operators based on the domestic sale of coal, as are the fund's administrative costs. These taxes are collected by the IRS and transferred to the BLDTF, which was established under the authority of the *Black Lung Benefits Revenue Act*, and administered by the Treasury.

P.L. 110-343, *Division B-Energy Improvement and Extension Act of 2008*, enacted on October 3, 2008, among other things, restructured the BLDTF debt by refinancing the outstanding high interest rate repayable advances with low interest rate discounted debt instruments similar in form to zero-coupon bonds, plus a one-time appropriation. This Act also allowed that any subsequent debt issued by the BLDTF may be used to make benefit payments, other authorized expenditures, or to repay debt and interest from the initial refinancing.

The significant assumptions used in the projections for the SOSI are the coal excise tax revenue estimates, the tax rate structure, number of beneficiaries, life expectancy, federal civilian pay raises, medical cost inflation, and interest rates used to discount future cash flows. These assumptions affect the amounts reported on the SOSI and the SCSIA. The program's valuation date is September 30 for each year of information presented in the SOSI and the SCSIA. Refer to DOL's financial statements for further details on significant assumptions related to the Black Lung Disability Benefit Program, and how these assumptions affect amounts presented on the SOSI and SCSIA.

Statement of Changes in Social Insurance Amounts

The Statement of Changes in Social Insurance Amounts reconciles the change (between the current valuation and the prior valuation) in the present value of estimated future revenue less estimated future expenditures for current and future participants (the open group measure) over the next 75 years (except Black Lung which has a rolling 25-year projection period through September 30, 2042). The reconciliation identifies several components of the changes that are significant and provides reasons for the changes. The following disclosures relate to the Statement of Changes in Social Insurance Amounts including the reasons for the components of the changes in the open group measure during the reporting period from the end of the previous reporting period for the Government's social insurance programs.

Social Security

The Statement of Changes in Social Insurance Amounts shows two reconciliations for Social Security: (1) changes from the period beginning on January 1, 2016, to the period beginning on January 1, 2017, and (2) changes from the period beginning on January 1, 2015, to the period beginning on January 1, 2016. All estimates relating to the Social Security Program in the Statement of Changes in Social Insurance Amounts represent values that are incremental to the prior change. As an example, the present values shown for economic data, assumptions, and methods represent the additional effect of these new data, assumptions, and methods after considering the effects from demography and the change in the valuation period. In general, an increase in the present value of net cash flows represents a positive change (improving financing), while a decrease in the present value of net cash flows represents a negative change (worsening financing).

Assumptions Used for the Components of the Changes for the Social Security Program

The present values included in the Statement of Changes in Social Insurance Amounts are for the current and prior years and are based on various economic as well as demographic assumptions used for the intermediate assumptions in the Social Security Trustees Reports for these years. Table 1A summarizes these assumptions for the current year.

Period Beginning on January 1, 2016, and Ending January 1, 2017

Present values as of January 1, 2016 are calculated using interest rates from the intermediate assumptions of the 2016 Social Security Trustees Report. All other present values in this part of the Statement of Changes in Social Insurance Amounts are calculated as a present value as of January 1, 2017. Estimates of the present value of changes in social insurance amounts due to changing the valuation period and changing demographic data, assumptions, and methods are presented using the interest rates under the intermediate assumptions of the 2016 Social Security Trustees Report. Because interest rates are an economic estimate and all estimates in the table are incremental to the prior change, all other present values in this part of the Statement of Changes in Social Insurance Amounts are calculated using the interest rates under the intermediate assumptions of the 2017 Social Security Trustees Report.

Period Beginning on January 1, 2015, and Ending January 1, 2016

Present values as of January 1, 2015 are calculated using interest rates from the intermediate assumptions of the 2015 Social Security Trustees Report. All other present values in this part of the Statement of Changes in Social Insurance Amounts are calculated as a present value as of January 1, 2016. Estimates of the present value of changes in social insurance amounts due to changing the valuation period and changing demographic data, assumptions, and methods are presented using the interest rates under the intermediate assumptions of the 2015 Social Security Trustees Report. Because interest rates are an economic estimate and all estimates in the table are incremental to the prior change, all other present values in this part of the Statement of Changes in Social Insurance Amounts are calculated using the interest rates under the intermediate assumptions of the 2016 Social Security Trustees Report.

Changes in Valuation Period

Period Beginning on January 1, 2016, and Ending January 1, 2017

The effect on the 75-year present values of changing the valuation period from the prior valuation period (2016-2090) to the current valuation period (2017-2091) is measured by using the assumptions for the prior valuation and extending them to cover the current valuation. Changing the valuation period removes a small negative net cash flow for 2016, replaces it with a much larger negative net cash flow for 2091, and measures the present values as of January 1, 2017, one year later. Thus, the present value of estimated future net cash flows (excluding the combined OASI and DI Trust Fund asset reserves at the start of the period) decreased (became more negative) when the 75-year valuation period changed from 2016-2090 to 2017-2091. In addition, the effect on the level of asset reserves in the combined OASI and DI Trust Funds of changing the valuation period is measured by assuming all values projected in the prior valuation for the year 2016 are realized. The change in valuation period increased the starting level of asset reserves in the combined OASI and DI Trust Funds.

Period Beginning on January 1, 2015, and Ending January 1, 2016

The effect on the 75-year present values of changing the valuation period from the prior valuation period (2015-2089) to the current valuation period (2016-2090) is measured by using the assumptions for the prior valuation and extending them to cover the current valuation. Changing the valuation period removes a small negative net cash flow for 2015, replaces it with a much larger negative net cash flow for 2090, and measures the present values as of January 1, 2016, one year later. Thus, the present value of estimated future net cash flows (excluding the combined OASI and DI Trust Fund asset reserves at the start of the period) decreased (became more negative) when the 75-year valuation period changed from 2015-2089 to 2016-2090. In addition, the effect on the level of asset reserves in the combined OASI and DI Trust Funds of changing the valuation period is measured by assuming all values projected in the prior valuation for the year 2015 are realized. The change in valuation period increased the starting level of asset reserves in the combined OASI and DI Trust Funds.

Changes in Demographic Data, Assumptions, and Methods

Period Beginning on January 1, 2016, and Ending January 1, 2017

The ultimate demographic assumptions for the current valuation (beginning on January 1, 2017) are the same as those for the prior valuation. However, the starting demographic values and the way these values transition to the ultimate assumptions were changed.

- Final birth rate data for 2015 indicated slightly lower birth rates than were assumed in the prior valuation.
- Incorporating 2014 mortality data obtained from the National Center for Health Statistics at ages under 65 and preliminary 2014 mortality data from Medicare experience at ages 65 and older resulted in higher death rates for all future years than were projected in the prior valuation.
- More recent legal and other-than-legal immigration data and historical population data were included.

The effects of including the recent birth rate data, immigration data, and historical population data were all decreases in the present value of estimated future net cash flows. These effects were offset somewhat by the inclusion of the recent mortality data, which increased the present value of estimated future net cash flows.

There were no notable changes in demographic methodology.

Period Beginning on January 1, 2015, and Ending January 1, 2016

The ultimate demographic assumptions for the current valuation (beginning on January 1, 2016), with the exception of a small change in marriage rates, are the same as those for the prior valuation. However, the starting demographic values and the way these values transition to the ultimate assumptions were changed.

- Final birth rate data for 2013 and 2014 indicated lower birth rates than were expected in the prior valuation. The data also show an increase in birth rates starting in 2014, one year later than assumed in the prior valuation.
- Incorporating mortality data obtained from the National Center for Health Statistics at ages under 65 for 2012 and 2013 and from Medicare experience at ages 65 and older for 2013 resulted in slightly higher death rates than were projected in the prior valuation.
- Assumed ultimate marriage rates were decreased somewhat to reflect a continuation of recent trends.
- More recent legal and other-than-legal immigration data and historical population data were included.

The effect of including the new birth rate data and immigration data was a decrease in the present value of estimated future net cash flows, while the inclusion of the mortality data and the marriage rate changes increased the present value of estimated future net cash flows.

There were two changes in demographic methodology:

- The transition from recent mortality rates to the ultimate rates starts sooner, immediately after the year of final data. The approach used for the prior valuation extended the trend of the last 10 years through the valuation year for the report and only thereafter started the transition to assumed ultimate rates of decline.
- Historical non-immigrant population counts were revised to match recent totals provided by the Department of Homeland Security. In addition, emigration rates for the never-authorized and visa-overstayer populations were recalibrated to reflect a longer historical period and to be less influenced by the high emigration rates experienced during the recent recession. Finally, the method for projecting emigration of the never-authorized population was altered to reflect lower rates of emigration for those who have resided here longer.

The effect of including these methodological improvements was an increase in the present value of estimated future net cash flows.

Changes in Economic Data, Assumptions, and Methods

Period Beginning on January 1, 2016, and Ending January 1, 2017

For the current valuation (beginning on January 1, 2017), there was one change to the ultimate economic assumptions.

- The ultimate average real-wage differential is assumed to be 1.20 percent in the current valuation, which is close to a 0.01 percent decrease relative to the previous valuation (even though both ultimate average real-wage differentials are 1.20 when rounded to two decimal places).

In addition to this change in ultimate assumption, the assumed path of the real-wage differential in the first 10 years of the projection period was also lower than in the previous valuation. This led to 0.05 percent lower annual growth in the average annual wage in covered employment in the first 10 years. The lower long-term and near-term real-wage differential assumptions are based on new projections by CMS of faster growth in employer sponsored group health insurance premiums. Because these premiums are not subject to the payroll tax, faster growth in these premiums means that a smaller share of employee compensation will be in the form of wages that are subject to the payroll tax. The lower real-wage differential decreased the present value of estimated future net cash flows.

Otherwise, the ultimate economic assumptions for the current valuation are the same as those for the prior valuation. However, the starting economic values and the way these values transition to the ultimate assumptions were changed. The most notable change was updating the near-term interest rates. Also notable was an assumed weaker recovery from the recent recession than previously expected, which led to a reduction in the ultimate level of actual and potential GDP of about 1.0 percent for all years after the short-range period.

The changes in near-term interest rates and GDP decreased the present value of estimated future net cash flows. Other, smaller changes in starting values and near-term growth assumptions combined to decrease the present value of estimated future net cash flows.

Period Beginning on January 1, 2015, and Ending January 1, 2016

For the current valuation (beginning on January 1, 2016), there were three changes to the ultimate economic assumptions.

- The ultimate rate of price inflation (CPI-W) was lowered by 0.1 percentage point, to 2.6 percent from 2.7 percent for the previous valuation.
- The ultimate average real-wage differential is assumed to be 1.20 percent in the current valuation, compared to 1.17 percent in the previous valuation.
- The ultimate real interest rate was lowered by 0.2 percentage point, to 2.7 percent from 2.9 percent for the previous valuation.

While very low inflation in recent years is reflective of U.S. and international supply and demand factors that have been affected by the global recession, the average rate of change in the CPI-W over the last two complete business cycles (from 1989 to 2007) is 2.63 percent. The lower ultimate CPI decreases the present value of estimated future net cash flows.

The higher real-wage differential assumption is based on new projections by CMS of slower growth in employer-sponsored group health insurance premiums. Because these premiums are not subject to the payroll tax, slower growth in these premiums means that a greater share of employee compensation will be in the form of wages that are subject to the payroll tax. The higher real-wage differential increased the present value of estimated future net cash flows.

Real interest rates have been low since 2000, and particularly low since the start of the recent recession. An ongoing and much-debated question among experts is how much of this change is cyclic or a temporary response to extraordinary events, versus a fundamental permanent change. The Trustees believe that lowering the long-term ultimate real interest rate somewhat is appropriate at this time. The lower real interest rate decreased the present value of estimated future net cash flows.

Otherwise, the ultimate economic assumptions for the current valuation are the same as those for the prior valuation. However, the starting economic values and the way these values transition to the ultimate assumptions were changed.

- A reduction in the ultimate level of actual and potential GDP of about 1.0 percent is assumed. Thus, by the end of the short-range period (2025) and for all years thereafter, projected GDP in 2009 dollars is about 1.8 percent below the level in last year's report.

The change to GDP decreased the present value of estimated future net cash flows. Other, smaller changes in starting values and near-term growth assumptions combined to increase the present value of estimated future net cash flows.

Changes in Law or Policy

Period Beginning on January 1, 2016, and Ending January 1, 2017

The monetary effect of the changes in law or policy on the long-range cost of the OASDI program was not significant at the consolidated level. Please refer to SSA's financial statements for further information related to the impact of the changes in law or policy on the long-range cost of the OASDI program.

Period Beginning on January 1, 2015, and Ending January 1, 2016

Between the prior valuation (the period beginning on January 1, 2015) and the current valuation (the period beginning on January 1, 2016), one law was enacted that is expected to have a significant effect on the long-range cost of the OASDI program. On November 2, 2015, the President signed into law P.L. 114-74, *Bipartisan Budget Act of 2015*. Several sections of the law had significant effects on long-range actuarial status, including:

- Section 831. Closure of unintended loopholes. This provision eliminates: (1) the ability to receive only a retired-worker benefit or an aged-spouse benefit when eligible for both, for those attaining age 62 in 2016 and later; and (2) the ability of a family member other than a divorced spouse to receive a benefit based on the earnings of a worker with a voluntarily suspended benefit, for voluntary suspensions requested after April 29, 2016.
- Section 832. Requirement for medical review. This section requires that the medical portion of the case review and any applicable residual functional capacity assessment for an initial disability determination be completed by an appropriate physician, psychiatrist, or psychologist.
- Section 833. Reallocation of payroll tax rates. For earnings in calendar years 2016 through 2018, this section temporarily reallocates from 1.80 percent to 2.37 percent the portion of the total 12.40 percent OASDI payroll tax that is directed to the DI Trust Fund. This reallocation of the payroll tax rates had no cost effect on the combined OASDI program.

The effect of including this law was an increase in the present value of estimated future net cash flows.

Potential Impact on the Social Insurance Statements of the September 5, 2017 Rescission of the 2012 DACA Policy Directive

The Deferred Action for Childhood Arrivals (DACA) policy directive was implemented on June 15, 2012. On September 5, 2017, the Department of Homeland Security rescinded the 2012 DACA policy directive and scheduled an orderly phase out of the DACA program. The SSA Office of the Chief Actuary has concluded that the phase out of the DACA program has an effect on the actuarial methods and assumptions used in developing the estimates presented in the Statements of Social Insurance and the Statement of Changes in Social Insurance Amounts. It is expected that the phase out of the DACA program will change the present value of future noninterest income less future cost for current and future participants (open group measure) presented in the Statements of Social Insurance and Statement of Changes in Social Insurance Amounts by less than \$20 billion. These effects are not considered to be material.

Medicare

The Statement of Changes in Social Insurance Amounts shows two reconciliations for Medicare: (1) changes from the period beginning on January 1, 2016, to the period beginning on January 1, 2017, and (2) changes from the period beginning on January 1, 2015, to the period beginning on January 1, 2016. All estimates relating to the Medicare program in the Statement of Changes in Social Insurance Amounts represent values that are incremental to the prior change. As an example,

the present values shown for demographic data, assumptions, and methods represent the additional effect that these assumptions have, once the effects from the change in the valuation period and projection base have been considered. In general, an increase in the present value of net cash flows represents a positive change (improving financing), while a decrease in the present value of net cash flows represents a negative change (worsening financing).

Assumptions Used for the Components of the Changes for the Medicare Program

The present values included in the Statement of Changes in Social Insurance Amounts are for the current and prior years and are based on various economic and demographic assumptions used for the intermediate assumptions in the Medicare Trustees Reports for these years. Table 1B summarizes these assumptions for the current year.

Period Beginning on January 1, 2016, and Ending January 1, 2017

Present values as of January 1, 2016 are calculated using interest rates from the intermediate assumptions of the 2016 Medicare Trustees Report. All other present values in this part of the Statement of Changes in Social Insurance Amounts are calculated as a present value as of January 1, 2017. Estimates of the present value of changes in social insurance amounts due to changing the valuation period, projection base, demographic assumptions, and law are presented using the interest rates under the intermediate assumptions of the 2016 Medicare Trustees Report. Since interest rates are an economic estimate and all estimates in the table are incremental to the prior change, the estimates of the present values of changes in economic and health care assumptions are calculated using the interest rates under the intermediate assumptions of the 2017 Medicare Trustees Report.

Period Beginning on January 1, 2015, and Ending January 1, 2016

Present values as of January 1, 2015 are calculated using interest rates from the intermediate assumptions of the 2015 Medicare Trustees Report. All other present values in this part of the Statement of Changes in Social Insurance Amounts are calculated as a present value as of January 1, 2016. Estimates of the present value of changes in social insurance amounts due to changing the valuation period, projection base, demographic assumptions, and law are presented using the interest rates under the intermediate assumptions of the 2015 Medicare Trustees Report. Since interest rates are an economic estimate and all estimates in the table are incremental to the prior change, the estimates of the present values of changes in economic and health care assumptions are calculated using the interest rates under the intermediate assumptions of the 2016 Medicare Trustees Report.

Changes in Valuation Period

Period Beginning on January 1, 2016, and Ending January 1, 2017

The effect on the 75-year present values of changing the valuation period from the prior valuation period (2016-2090) to the current valuation period (2017-2091) is measured by using the assumptions for the prior valuation period and extending them, in the absence of any other changes, to cover the current valuation period. Changing the valuation period removes a small negative net cash flow for 2016, replaces it with a much larger negative net cash flow for 2091, and measures the present values as of January 1, 2017, one year later. Thus, the present value of estimated future net cash flow (including or excluding the combined Medicare Trust Fund assets at the start of the period) decreased (became more negative) when the 75-year valuation period changed from 2016-2090 to 2017-2091. In addition, the effect on the level of assets in the combined Medicare Trust Funds of changing the valuation period is measured by assuming all values projected in the prior valuation for the year 2016 are realized. The change in valuation period increased the starting level of assets in the combined Medicare Trust Funds.

Period Beginning on January 1, 2015, and Ending January 1, 2016

The effect on the 75-year present values of changing the valuation period from the prior valuation period (2015-2089) to the current valuation period (2016-2090) is measured by using the assumptions for the prior valuation period and extending them, in the absence of any other changes, to cover the current valuation period. Changing the valuation period removes a small negative net cash flow for 2015, replaces it with a much larger negative net cash flow for 2090, and measures the present values as of January 1, 2016, one year later. Thus, the present value of estimated future net cash flow (including or excluding the combined Medicare Trust Fund assets at the start of the period) decreased (became more negative) when the 75-year valuation period changed from 2015-2089 to 2016-2090. In addition, the effect on the level of assets in the combined Medicare Trust Funds of changing the valuation period is measured by assuming all values projected in the prior valuation for the year 2015 are realized. The change in valuation period slightly increased the starting level of assets in the combined Medicare Trust Funds.

Changes in Demographic Data, Assumptions, and Methods

Period Beginning on January 1, 2016, and Ending January 1, 2017

The demographic assumptions used in the Medicare projections are the same as those used for the Old-Age Survivors and Disability Insurance (OASDI) and are prepared by the Office of the Chief Actuary at SSA.

The ultimate demographic assumptions for the current valuation (beginning on January 1, 2017), with the exception of a small change in marriage rates, are the same as those for the prior valuation. However, the starting demographic values and the way these values transition to the ultimate assumptions were changed.

- Final birth rate data for 2015 indicated slightly lower birth rates than were assumed in the prior valuation.
- Incorporating 2014 mortality data obtained from the National Center for Health Statistics at ages under 65 and preliminary 2014 mortality data from Medicare experience at ages 65 and older resulted in higher death rates for all future years than were projected in the prior valuation.
- More recent legal and other-than-legal immigration data and historical population data were included.

There were no consequential changes in demographic methodology.

These changes slightly lowered overall Medicare enrollment for the current valuation period and resulted in a decrease in the estimated future net cash flow. The present value of estimated expenditures is lower for Part A but slightly higher for Parts B and D; and the present value of estimated income is also higher for Parts B and D but lower for Part A.

Period Beginning on January 1, 2015, and Ending January 1, 2016

The demographic assumptions used in the Medicare projections are the same as those used for the OASDI and are prepared by the Office of the Chief Actuary at SSA.

The ultimate demographic assumptions for the current valuation (beginning on January 1, 2016), with the exception of a small change in marriage rates, are the same as those for the prior valuation. However, the starting demographic values and the way these values transition to the ultimate assumptions were changed.

- Final birth rate data for 2013 and 2014 indicated lower birth rates than were expected in the prior valuation. The data also show an increase in birth rates starting in 2014, one year later than assumed in the prior valuation.
- Incorporating mortality data obtained from the National Center for Health Statistics at ages under 65 for 2012 and 2013 and from Medicare experience at ages 65 and older for 2013 resulted in slightly higher death rates than were projected in the prior valuation.
- Assumed ultimate marriage rates were decreased somewhat to reflect a continuation of recent trends.
- More recent legal and other-than-legal immigration data and historical population data were included.

There were two changes in demographic methodology:

- The transition from recent mortality rates to the ultimate rates starts sooner, immediately after the year of final data. The approach used for the prior valuation extended the trend of the last 10 years through the valuation year for the report and only thereafter started the transition to assumed ultimate rates of decline.
- Historical non-immigrant population counts were revised to match recent totals provided by the Department of Homeland Security. In addition, emigration rates for the never-authorized and visa-overstayer populations were recalibrated to reflect a longer historical period and to be less influenced by the high emigration rates experienced during the recent recession. Finally, the method for projecting emigration of the never-authorized population was altered to reflect lower rates of emigration for those who have resided here longer.

These changes slightly lowered overall Medicare enrollment for the current valuation period and resulted in an increase in the estimated future net cash flow. The present value of estimated expenditures is lower for all parts of Medicare; and the present value of estimated income is also lower for Parts B and D but very slightly higher for Part A.

Changes in Economic and Other Health Care Assumptions

Period Beginning on January 1, 2016, and Ending January 1, 2017

The economic assumptions used in the Medicare projections are the same as those used for the Old-Age Survivors and Disability Insurance (OASDI) and are prepared by the Office of the Chief Actuary at SSA.

For the current valuation (beginning on January 1, 2017), there was one change to the ultimate economic assumptions.

- The ultimate average real-wage differential is assumed to be 1.20 percent in the current valuation, which is close to a 0.01 percent decrease relative to the previous valuation (even though both ultimate average real-wage differentials are 1.20 when rounded to two decimal places).

In addition to this change in assumption, the assumed real-wage differential for the first ten years of the projection period averaged 0.05 percent lower than in the previous valuation. The lower long-term and near-term real-wage differential assumptions are based on new projections of faster growth in employer sponsored group health insurance premiums. Because these premiums are not subject to the payroll tax, faster growth in these premiums means that a smaller share of employee compensation will be in the form of wages that are subject to the payroll tax.

Otherwise, the ultimate economic assumptions for the current valuation are the same as those for the prior valuation. However, the starting economic values and the way these values transition to the ultimate assumptions were changed. Most significantly, an assumed weaker recovery from the recent recession than previously expected led to a reduction in the ultimate level of actual and potential GDP of about 1.0 percent for all years after the short-range period.

The health care assumptions are specific to the Medicare projections. The following health care assumptions were changed in the current valuation.

- Utilization rate assumptions for inpatient hospital and skilled nursing facilities services were decreased.
- The number of beneficiaries enrolled in Medicare Advantage plans and their relative costs are slightly different from last year's assumptions.
- Lower productivity increases through 2025, resulting in higher provider payment updates.
- Higher projected drug rebates.
- Change in projection methodology of drug spending for Part B patients with end-stage renal disease.

The net impact of these changes resulted in a decrease in the estimated future net cash flow for total Medicare.

Period Beginning on January 1, 2015, and Ending January 1, 2016

The economic assumptions used in the Medicare projections are the same as those used for the OASDI and are prepared by the Office of the Chief Actuary at SSA.

For the current valuation (beginning on January 1, 2016), there were three changes to the ultimate economic assumptions.

- The ultimate rate of price inflation (CPI-W) was lowered by 0.1 percentage point, to 2.6 percent from 2.7 percent for the previous valuation.
- The ultimate average real-wage differential is assumed to be 1.20 percent in the current valuation period, compared to 1.17 percent in the previous valuation period.
- The ultimate real interest rate was lowered by 0.2 percentage point, to 2.7 percent from 2.9 percent for the previous valuation period.

While very low inflation in recent years is reflective of U.S. and international supply and demand factors that have been affected by the global recession, the average rate of change in the CPI-W over the last two complete business cycles (from 1989 to 2007) is 2.63 percent.

The higher real-wage differential assumption is based on new projections by CMS of slower growth in employer-sponsored group health insurance premiums. Because these premiums are not subject to the payroll tax, slower growth in these premiums means that a greater share of employee compensation will be in the form of wages that are subject to the payroll tax.

Real interest rates have been low since 2000, and particularly low since the start of the recent recession. An ongoing and much-debated question among experts is how much of this change is cyclic or a temporary response to extraordinary events, versus a fundamental permanent change. The Trustees believe that lowering the long-term ultimate real interest rate somewhat is appropriate at this time. The long-range present values are very sensitive to the ultimate interest rate assumption because they are used as the discount factor. The reduction in the ultimate interest rate assumption from 2.9 percent to 2.7 percent increases each of the present values by roughly 15 to 16 percent.

Otherwise, the ultimate economic assumptions for the current valuation are the same as those for the prior valuation. However, the starting economic values and the way these values transition to the ultimate assumptions were changed.

- A reduction in the ultimate level of actual and potential GDP of about 1.0 percent is assumed. Thus, by the end of the short-range period (2025) and for all years thereafter, projected GDP in 2009 dollars is about 1.8 percent below the level in last year's report.

The health care assumptions are specific to the Medicare projections. The following health care assumptions were changed in the current valuation.

- Utilization rate assumptions for inpatient hospital services were increased.

- The number of beneficiaries enrolled in Medicare Advantage plans and their relative costs are slightly different from last year's assumptions.
- Lower productivity increases through 2021, resulting in higher provider payment updates.
- Greater reductions in expenditures attributable to the Independent Payment Advisory Board.
- Inclusion of the income and expenditures for aged non-insured beneficiaries in the Medicare Part A long-range analysis.
- Higher projected drug cost trend, particularly for certain high-cost specialty drugs.

The net impact of these changes resulted in a decrease in the estimated future net cash flow for total Medicare. For Part A, these changes resulted in an increase to the present value of estimated future expenditures and income, with an overall decrease in the estimated future net cash flow. For Part B and Part D, these changes increased the present value of estimated future expenditures (and also income).

Changes in Law or Policy

Period Beginning on January 1, 2016, and Ending January 1, 2017

The monetary effect of the changes in law or policy on the present value of the 75-year estimated future income, expenditures, and net cash flow of the Medicare program was not significant at the consolidated level. Please refer to HHS's financial statements for further information related to the impact of the changes in law or policy on the 75-year estimated future income, expenditures, and net cash flow of the Medicare program.

Period Beginning on January 1, 2015, and Ending January 1, 2016

Most of the provisions enacted as part of Medicare legislation since the prior valuation date had little or no impact on the program. The following provisions did have a financial impact on the present value of the 75-year estimated future income, expenditures, and net cash flow.

- The *Trade Preference Extension Act of 2015* requires Medicare coverage for renal dialysis services provided by outpatient renal dialysis facilities to individuals with acute kidney injury, effective January 1, 2017.
- The *Bipartisan Budget Act of 2015* (BBA) included provisions that affect the HI and SMI programs.
 - The BBA required that the 2016 actuarial rate for enrollees aged 65 and older be determined as if the hold-harmless provision does not apply, thereby lowering the standard Part B premium rate from what it otherwise would have been. The premium revenue that was lost by using the resulting lower premium (excluding the forgone income-related premium revenue) was replaced by a transfer of general revenue from the Treasury, which will be repaid over time to the General Fund. Starting in 2016, in order to repay the balance due (which is to include the transfer amount and the forgone income-related premium revenue), the monthly Part B premium otherwise determined is to be increased by \$3.00. These repayment amounts are to be added to the Part B premium otherwise determined each year and paid back to the General Fund. This \$3.00 increase will not be matched by government contributions. These repayment amounts are to continue until the total amount collected is equal to the beginning balance due. (In the final year of the repayment, the additional amounts may be modified to avoid an overpayment.) The repayment amounts (excluding those for high-income enrollees) are subject to the hold-harmless provision. The BBA also stipulated that if the Social Security cost-of-living adjustment (COLA) was 0 percent in 2017, then an additional transfer (and \$3 repayment amount) would have again applied. However, the 2017 COLA of 0.3 percent was released on October 18, 2016.
 - Outpatient hospital services provided on or after January 1, 2017 by most new off-campus hospital provider-based outpatient departments (that is, those established on or after the BBA date of enactment of November 2, 2015 and located more than 250 yards from the campus) are excluded from the outpatient hospital prospective payment system, and are instead to be reimbursed under the applicable Part B payment system.
 - The sequestration process that is in place should Congress fail to address the budget deficit by certain deadlines is extended by one year, through fiscal year 2025. In addition, Medicare benefit payments for services provided under periods of sequestration incur a payment reduction limited to 2 percent, so that the former differential payment reduction limits imposed for fiscal years 2023 and 2024 are replaced with 2-percent limits. Finally, the 2-percent limit is raised to 4.0 percent for the first 6 months of sequestration required for fiscal year 2025 and reduced to 0.0 percent for the second 6 months of the year.

- The *Consolidated Appropriations Act of 2016* included provisions that affect the HI and SMI programs.
 - The payment calculation associated with inpatient hospital operating costs for Puerto Rico hospital discharges on or after January 1, 2016 is to be based on 0 percent of the applicable Puerto Rico percentage and 100 percent of the applicable federal percentage. (In addition, CMS announced that both the fiscal year 2016 Inpatient Prospective Payment System Pricer and the Long-Term Care Hospital Pricer, which are used to determine all inpatient hospital payment rates and certain long-term care hospital payment rates, respectively, for providers nationwide, are to incorporate the Puerto Rico inpatient hospital payment modification. These conforming changes are applicable to inpatient hospital discharges and long-term care hospital discharges on or after January 1, 2016.)
 - Puerto Rico hospitals are eligible to receive incentive payments under the Medicare Electronic Health Records Incentive Program, effective January 1, 2016.
 - Effective January 1, 2017, separate Medicare payment is authorized to home health agencies when they use cost-effective disposable alternatives to negative pressure wound therapy equipment.
 - To incentivize the transition from traditional x-ray imaging to digital radiography, Part B payment for the technical component of film x-rays, under the hospital outpatient prospective payment system and under the physician fee schedule, is reduced by 20 percent beginning in 2017. In addition, payment for the technical component of x-rays taken using computed radiography technology is reduced by 7 percent during 2018 through 2022 and by 10 percent beginning in 2023. Also, the discount in payment for the professional component of multiple imaging services furnished on or after January 1, 2017 is reduced from 25 percent to 5 percent, and the 5 percent reduction is taken in a non-budget neutral manner.
 - A one-year moratorium for calendar year 2017 is placed on the annual fee to be paid by health insurance providers. This fee, which was established by the *Affordable Care Act*, is imposed on certain large health insurance providers, including those furnishing coverage under Medicare Advantage (Part C) and Medicare Part D. (Since Medicare Advantage is paid for by the HI Trust Fund and the Part B account of the SMI Trust Fund, this provision affects all parts of Medicare.)

Overall these provisions resulted in a slight increase in the estimated future net cash flow for total Medicare. For Part A, these changes resulted in a slight decrease to the present value of estimated future expenditures, with an overall increase in the estimated future net cash flow. For Part B, these changes decreased the present value of estimated future expenditures (and also income). For Part D, the above-mentioned changes also resulted in a lower present value of estimated future expenditures (and also income) but only very slightly.

Change in Projection Base

Period Beginning on January 1, 2016, and Ending January 1, 2017

Actual income and expenditures in 2016 were different than what was anticipated when the 2016 Medicare Trustees Report projections were prepared. Part A income was higher and expenditures were lower than anticipated, based on actual experience. Part B total income and expenditures were higher than estimated based on actual experience. For Part D, actual income and expenditures were both lower than prior estimates. The net impact of the Part A, B, and D projection base changes is an increase in the estimated future net cash flow. Actual experience of the Medicare Trust Funds between January 1, 2016 and January 1, 2017 is incorporated in the current valuation and is slightly more than projected in the prior valuation.

Period Beginning on January 1, 2015, and Ending January 1, 2016

Actual income and expenditures in 2015 were different than what was anticipated when the 2015 Medicare Trustees Report projections were prepared. Part A income and expenditures were higher than anticipated, based on actual experience. Part B total income and expenditures were lower than estimated based on actual experience. For Part D, actual income and expenditures were both higher than prior estimates. The net impact of the Part A, B, and D projection base changes is a decrease in the estimated future net cash flow. Actual experience of the Medicare Trust Funds between January 1, 2015 and January 1, 2016 is incorporated in the current valuation and is slightly less than projected in the prior valuation.

Potential Impact on the Social Insurance Statements of the September 5, 2017 Rescission of the 2012 DACA Policy Directive

The DACA policy directive was implemented on June 15, 2012. On September 5, 2017, the Department of Homeland Security rescinded the 2012 DACA policy directive and scheduled an orderly phase out of the DACA program. The SSA Office of the Chief Actuary has concluded that the phase out of the DACA program has an effect on the actuarial methods and assumptions used in developing the estimates presented in the Statements of Social Insurance and the Statement of

Changes in Social Insurance Amounts. It is expected that the phase-out of the DACA program, which affects the demographic assumptions used in the Medicare projections, will not have a material impact on the present value estimates in the Statements of Social Insurance and Statement of Changes in Social Insurance Amounts.

Other

The present values included in the Statement of Changes in Social Insurance Amounts for the Railroad Retirement program are for the current and prior valuation and are based on various employment, demographic, and economic assumptions that reflect the RRB's reasonable estimate of expected future financial and actuarial status of the trust funds.

Note that beginning in fiscal year 2016, the present values included in the Statement of Changes in Social Insurance Amounts for the Railroad Retirement program were on a fiscal year basis, as of October 1, 2015. Prior to fiscal year 2016, all present values were on a calendar year basis, as of January 1. The primary reasons for the changes in the 2017 Statement of Changes in Social Insurance Amounts for Railroad Retirement are for the 12-month period between October 1, 2015 and October 1, 2016, while the primary reasons for the changes in the 2016 Statement of Changes in Social Insurance Amounts for Railroad Retirement were for the 9-month period between January 1, 2015 and October 1, 2015. Consequently, the Railroad Retirement changes on the 2017 Statement of Changes in Social Insurance Amounts will not be comparable to the Railroad Retirement changes on the 2016 Statement of Changes in Social Insurance Amounts. For a more detailed description of the primary reasons for the changes in the 2017 Statement of Changes in Social Insurance Amounts, refer to RRB's financial statements.

The significant assumptions used in the projections of the Black Lung social insurance program, referenced earlier in this note, affect the amounts reported on the Statement of Changes in Social Insurance Amounts, which shows two reconciliations for Black Lung: (1) changes in the open group measure for the year ended September 30, 2017, and (2) changes in the open group measure for the year ended September 30, 2016. For a more detailed description of the primary reasons for the changes in the 2017 Statement of Changes in Social Insurance Amounts, refer to DOL's financial statements.

Note 23. Long-Term Fiscal Projections

The Statements of Long-Term Fiscal Projections are prepared pursuant to SFFAS No. 36, *Comprehensive Long-Term Projections for the U.S. Government*, as amended. The basic financial statement, Note 23, and related unaudited required supplementary information (RSI) provide information to aid readers of the *Financial Report* in assessing whether current policies for Federal spending and taxation can be sustained and the extent to which the cost of public services received by current taxpayers will be shifted to future taxpayers under sustainable policies. This assessment requires prospective information about receipts and spending, the resulting debt, and how these amounts relate to the size of the economy. A sustainable policy is defined as one where the ratio of Federal debt held by the public to GDP (the debt-to-GDP ratio) is ultimately stable or declining. The *Financial Report* does not address the sustainability of State and local government fiscal policy.

The projections and analysis presented here are extrapolations based on an array of assumptions described in detail below. A fundamental assumption is that current Federal policy will not change. This assumption is made so as to inform the question of whether current fiscal policy is sustainable and, if it is not sustainable, the magnitude of needed reforms to make fiscal policy sustainable. The projections are therefore neither forecasts nor predictions. If policy changes are implemented, perhaps in response to projections like those presented here, then actual financial outcomes will be different than those projected. The methods and assumptions underlying the projections are subject to continuing refinement.

The projections focus on future cash flows, and do not reflect either the accrual basis or the modified-cash basis of accounting. These cash-based projections reflect receipts or spending at the time cash is received or when a payment is made by the Government. In contrast, accrual-based projections would reflect amounts in the time period in which income is earned or when an expense or obligation is incurred. The cash basis accounting underlying the long-term fiscal projections is consistent with methods used to prepare the Statements of Social Insurance (SOSI) and the generally cash-based Federal budget.

The basic financial statement, Long-Term Fiscal Projections for the U.S. Government, displays the present value of 75-year projections for various categories of the Federal Government's receipts and non-interest spending.¹⁰ The projections for fiscal years 2017 and 2016 are expressed in present value dollars and as a percentage of the present value of Gross Domestic Product (GDP)¹¹ as of September 30, 2017 and September 30, 2016, respectively. The present value of a future amount, for example \$1 billion in October 2092, is the amount of money that if invested on September 30, 2017 in an account earning the government borrowing rate would have a value of \$1 billion in October 2092.¹²

The present value of a receipt or expenditure category over 75 years is the sum of the annual present value amounts. When expressing a receipt or expenditure category over 75 years as a percent of GDP, the present value dollar amount is divided by the present value of GDP over 75 years. Measuring receipts and expenditures as a percentage of GDP is a useful indicator of the economy's capacity to sustain Federal Government programs.

Fiscal Projections

Receipt categories in the long-term fiscal projections include individual income taxes, Social Security and Medicare payroll taxes, and a residual remaining category of "other receipts." On the spending side, categories include: (1) discretionary spending that is funded through annual appropriations, such as spending for national security, and (2) mandatory (entitlement) spending that is generally financed with permanent or multi-year appropriations, such as spending for Social Security and Medicare. This year's projections for Social Security and Medicare are based on the same economic and demographic assumptions that underlie the 2017 Social Security and Medicare trustees' reports and the 2017 Statement of Social Insurance, while comparative information presented from last year's report is based on the 2016 Social Security and Medicare trustees' reports and the 2016 Statement of Social Insurance. Projections for the other categories of receipts and spending are consistent with the economic and demographic assumptions in the trustees' reports. The projections assume the continuance of current policy which, as is explained below, can be different than current law in cases where lawmakers have in the past periodically changed the law in a consistent way. Also, the projections are based on current policy as of September

¹⁰ For the purposes of this analysis, spending is defined in terms of outlays. In the context of Federal budgeting, spending can either refer to budget authority – the authority to commit the government to make a payment; to obligations – binding agreements that will result in payments, either immediately or in the future; or to outlays – actual payments made.

¹¹ GDP is a standard measure of the overall size of the economy and represents the total market value of all final goods and services produced domestically during a given period of time. The components of GDP are: private sector consumption and investment, government consumption and investment, and net exports (exports less imports). Equivalently, GDP is a measure of the gross income generated from domestic production over the same time period.

¹² Present values recognize that a dollar paid or collected in the future is worth less than a dollar today because a dollar today could be invested and earn interest. To calculate a present value, future amounts are thus reduced using an assumed interest rate, and those reduced amounts are summed.

30. Therefore, such projections do not reflect legislation enacted subsequent to September 30 that changes policy that was in effect as of the end of the fiscal year.

The projections shown in the basic statement are made over a 75-year time frame, consistent with the time frame featured in the Social Security and Medicare trustees' reports. However, these projections are for fiscal years starting on October 1, whereas the trustees' reports feature calendar-year projections. This difference allows the projections to start from the actual budget results from fiscal years 2017 and 2016.

The *Tax Cuts and Jobs Act* (P.L. 115-97) was enacted on December 22, 2017, and is therefore not reflected in the projections shown in the Statements of Long-Term Fiscal Projections and this note. For more information on the Tax Cuts and Jobs Act, see Note 25—Subsequent Events.

Changes in Long-Term Fiscal Projections		
Present Value (PV) of 75-Year Projections	Trillions of \$	Percent of GDP
Receipts less non-interest spending as of September 30, 2016.....	(10.6)	(0.8) %
Components of Change:		
Change due to Economic and Demographic Assumptions.....	(4.7)	(0.3)
Change due to Program-Specific Actuarial Assumptions.....	1.0	0.1
Change due to Updated Budget Data.....	2.1	0.2
Change in Reporting Period.....	(0.2)	-
Change in Model Technical Assumptions.....	(3.8)	(0.3)
Total	(5.6)	(0.4)
Receipts less non-interest spending as of September 30, 2017.....	(16.2)	(1.2)

NOTE: Totals may not equal the sum of components due to rounding.

This year's estimate of the 75-year present value imbalance of receipts less non-interest spending is 1.2 percent of the 75-year present value of GDP, compared to 0.8 percent as was projected in last year's *Financial Report*.¹³ The above table reports the effects of various factors on the updated projections. The largest factor, increasing the imbalance by 0.3 percent of GDP (\$4.7 trillion), is attributable to the economic and demographic assumptions used in formulating the projection. Lower GDP and wage projections had the effect of decreasing the 75-year present value of income tax and social insurance receipts, with a smaller decrease in Social Security outlays, for a net increase in the 75-year present value imbalance. Nearly as significant is the effect of a change in the model's assumption for the future growth of spending for Overseas Contingency Operations (OCO). As discussed further below in the section on assumptions used in the projections, outlays for OCO are now assumed to grow with GDP from the level of outlays in the most recent year, in contrast to the previous assumption under which OCO outlays were assumed to phase out entirely during the first 10 years of the projection. The OCO change and other minor offsetting updates increase the imbalance by 0.3 percent of GDP (\$3.8 trillion). The next largest change in the table – decreasing the imbalance by 0.2 percent of GDP (\$2.1 trillion) – is attributable to actual budget results for fiscal year 2017 and other budget data, including lower actual spending for mandatory programs other than Social Security, Medicare, and Medicaid, partially offset by increased funding for OCO in final 2017 appropriations action. The cumulative effect of the various changes to OCO described above (which reflect current policy without change as discussed in footnote 21) increased the imbalance by 0.4 percent of GDP (\$5.7 trillion).

The penultimate row in the basic financial statement shows that this year's estimate of the overall 75-year present value of receipts less non-interest spending is 1.2 percent of the 75-year present value of GDP (negative \$16.2 trillion, as compared to GDP of \$1,347.0 trillion).

¹³ More information on the projections in last year's *Financial Report* can be found in Note 23 to the Financial Statements here: https://fiscal.treasury.gov/fsreports/rpt/finrep/fr/16frusg/NotestoFinancialStatements_2016.pdf

This imbalance can be broken down by funding source. There is a surplus of receipts over spending of 0.2 percent of GDP (\$3.3 trillion) among programs funded by the government's general revenues, but an imbalance of 1.5 percent of GDP (\$19.6 trillion¹⁴) for the combination of Social Security (OASDI) and Medicare Part A, which under current law are funded with payroll taxes and not in any material respect with general revenues.^{15, 16} By comparison, the fiscal year 2016 projections showed that programs funded by the Government's general revenues had an excess of receipts over spending of 0.7 percent of GDP (\$8.7 trillion) while the payroll tax-funded programs had an imbalance of spending over receipts of 1.5 percent of GDP (\$19.4 trillion).

Sustainability and the Fiscal Gap

As discussed further in RSI, the projections in this report indicate that current policy is not sustainable. If current policy is left unchanged, the projections show the debt-to-GDP ratio will fall about 4 percentage points between 2017 and 2023 before commencing a steady rise, exceeding its 2017 level by 2029, exceeding 100 percent by 2037, and reaching 297 percent in 2092. Moreover, if the trends that underlie the 75-year projections were to continue, the debt-to-GDP ratio would continue to rise beyond the 75-year window.

The fiscal gap measures how much the primary surplus (receipts less non-interest spending) must increase in order for fiscal policy to achieve a target debt-to-GDP ratio in a particular future year. In these projections, the fiscal gap is estimated over a 75-year period, from 2018 to 2092, and the target debt-to-GDP ratio is equal to the ratio at the beginning of the projection period, in this case the debt-to-GDP ratio at the end of fiscal year 2017.

The 75-year fiscal gap under current policy is estimated at 2.0 percent of GDP, which is 10.0 percent of the 75-year present value of projected receipts and 9.4 percent of the 75-year present value of non-interest spending. This estimate of the fiscal gap is 0.4 percentage point larger than was estimated in 2016 (1.6 percent of GDP).

The projections show that projected primary deficits average 1.2 percent of GDP over the next 75 years under current policies. If policies were put in place that would result in a zero fiscal gap, the average primary surplus over the next 75 years would be 0.8 percent of GDP, 2.0 percentage points higher than the projected present value of receipts less non-interest spending shown in the basic financial statement. In these projections, closing the fiscal gap requires running a substantially positive level of primary surplus, rather than simply eliminating the primary deficit. The primary reason is that the projections assume future interest rates will exceed the growth rate of GDP. Achieving primary balance (that is, running a primary surplus of zero) implies that the debt held by the public grows each year by the amount of interest spending, which under these assumptions would result in debt growing faster than GDP.

Assumptions Used and Relationship to Other Financial Statements

A fundamental assumption underlying the projections is that current Federal policy (defined below) does not change. The projections are therefore neither forecasts nor predictions, and do not consider large infrequent events such as natural disasters, military engagements, or economic crises. By definition, they do not build in changes in policy, such as recent proposals to repeal the Affordable Care Act. If policy changes are enacted, perhaps in response to projections like those presented here, then actual fiscal outcomes will be different than those projected.

¹⁴ The 75-year present value imbalance for Social Security and Medicare Part A of \$19.6 trillion is comprised of several line items from the long-term fiscal projections – Social Security outlays net of Social Security payroll taxes (\$20.6 trillion) and Medicare Part A outlays net of Medicare payroll taxes (\$7.2 trillion) – as well as subcomponents of these programs not presented separately in the table. These subcomponents include Social Security and Medicare Part A administrative costs that are classified as non-defense discretionary spending (\$0.7 trillion) and Social Security and Medicare Part A income other than payroll taxes: taxation of benefits (-\$4.0 trillion), Federal employer share (-\$1.2 trillion), and other income (-\$3.7 trillion).

¹⁵ Social Security and Medicare Part A expenditures can exceed payroll tax revenues in any given year to the extent that there are sufficient balances in the respective trust funds, balances that derive from past excesses of payroll tax revenues over expenditures and interest earned on those balances and represent the amount the General Fund owes the respective trust fund programs. When spending does exceed payroll tax revenues, as has occurred each year since 2008 for Medicare Part A and 2010 for Social Security, the excess spending is financed first with interest due from the General Fund and secondly with a drawdown of the trust fund balance; in either case, the spending is ultimately supported by general revenues or borrowing. Under current law, benefits for Social Security and Medicare Part A can be paid only to the extent that there are sufficient balances in the respective trust funds. In order for the long-term fiscal projections to reflect the full size of these program's commitments to pay future benefits, the projections assume that all scheduled benefits will be financed with borrowing to the extent necessary after the trust funds are exhausted.

¹⁶ The fiscal imbalances reported in the long-term fiscal projections are limited to future outlays and receipts. They do not include the initial level of publicly-held debt, which was \$14.7 trillion in 2017 and \$14.2 trillion in 2016, and therefore they do not by themselves answer the question of how large fiscal reforms must be to make fiscal policy sustainable, or how those reforms divide between reforms to Social Security and Medicare Part A and to other programs. Other things equal, past cash flows (primarily surpluses) for Social Security and Medicare Part A reduced Federal debt at the end of 2017 by \$3.1 trillion (the trust fund balances at that time); the contribution of other programs to Federal debt at the end of 2017 was therefore \$17.7 trillion. Because the \$19.6 trillion imbalance between outlays and receipts over the next 75 years for Social Security and Medicare Part A does not take account of the Social Security and Medicare Part A trust fund balances, it overstates the magnitude of reforms necessary to make Social Security and Medicare Part A solvent over 75 years by \$3.1 trillion. The \$3.1 trillion combined Social Security and Medicare Part A trust fund balance represents a claim on future general revenues.

Even if policy does not change, actual expenditures and receipts could differ materially from those projected here. Long-range projections are inherently uncertain and are necessarily based on simplifying assumptions. For example, one key simplifying assumption is that interest rates paid on debt held by the public remain unchanged, regardless of the amount of debt outstanding. To the contrary, it is likely that future interest rates would increase if the debt-to-GDP ratio rises as shown in these projections. To help illustrate this uncertainty, projections that assume higher and lower interest rates are presented in the “Alternative Scenarios” discussion in the RSI section of this *Financial Report*.

As is true for prior long-term fiscal projections for the *Financial Report*, the assumptions for GDP, interest rates, and other economic and demographic variables underlying this year’s projections are the same assumptions that underlie the most recent Social Security and Medicare trustees’ report projections, adjusted for historical revisions that occur annually. The use of discount factors consistent with the Social Security trustees’ rate allows for consistent present value calculations over 75 years between the Statements of Long-Term Fiscal Projections and the Statements of Social Insurance.

The following bullets summarize the key assumptions used for the categories of receipts and spending presented in the basic financial statement and the disclosures:

- **Social Security:** Projected Social Security (OASDI) spending excludes administrative expenses, which are classified as discretionary spending, and is based on the projected expenditures in the 2017 Social Security trustees’ report for benefits and for the Railroad Retirement interchange. The projections of Social Security payroll taxes and Social Security spending are based on future spending and for payroll taxes as are projected in the 2017 Social Security trustees’ report, adjusted for presentational differences and converted to a fiscal year basis. More information about the assumptions for Social Security cost growth can be found in Note 22 and the RSI discussion of Social Insurance.
- **Medicare:** Projected Medicare spending is also shown net of administrative expenses and is based on projected incurred expenditures from the 2017 Medicare trustees’ report. The projections here make some adjustments to the trustees’ report projections. Medicare Part B and D premiums, as well as State contributions to Part D, are subtracted from gross spending in measuring Part B and Part D outlays, just as they are subtracted from gross cost to yield net cost in the financial statements.¹⁷ Here, as in the Federal budget, premiums are treated as “negative spending” rather than receipts since they represent payment for a service rather than payments obtained through the Government’s sovereign power to tax. This is similar to the financial statement treatment of premiums as “earned” revenue as distinct from all other sources of revenue, such as taxes. The projections are based on Medicare spending in the Medicare trustees’ report, adjusted for presentational differences and converted to a fiscal year basis. Medicare Part A payroll taxes are projected similarly. More information about the assumptions for Medicare cost growth can be found in Note 22 and the Required Supplementary Information for Social Insurance. As discussed in Note 22, there is uncertainty about whether the reductions in health care cost growth projected in the Medicare trustees’ report will be fully achieved. Note 22 illustrates this uncertainty by considering Medicare cost growth assumptions under varying policy assumptions.
- **Medicaid:** The Medicaid spending projections start with the projections from the *2016 Actuarial Report on the Financial Outlook for Medicaid* prepared by the Office of the Actuary, Centers for Medicare & Medicaid Services (CMS)¹⁸. These projections are based on recent trends in Medicaid spending, the demographic, economic, and health cost growth assumptions in the 2016 Medicare Trustees’ Report, and projections of the effect of the ACA on Medicaid enrollment. The projections, which end in 2025, are adjusted to accord with the actual Medicaid expenditures in fiscal year 2017. After 2025, the projections assume no further change in State Medicaid coverage under the ACA, with the number of Medicaid beneficiaries expected to grow at the same rate as total population, and Medicaid costs per beneficiary assumed to grow at the same rate as Medicare benefits per beneficiary, as is generally consistent with the experience since 1987. Between 1987 and 2015, the average annual growth rate of outlays per beneficiary for Medicaid and Medicare were within 0.2 percentage point of each other. Projections of Medicaid spending are subject to added uncertainty related to: (1) assumed reductions in health care cost growth discussed above in the context of Medicare, and (2) the projected size of the Medicaid enrolled population, which depends on a variety of factors, including future actions by States regarding the ACA Medicaid expansion.
- **Other Mandatory Spending:** Other mandatory spending, which includes Federal employee retirement, veterans’ disability benefits, and means-tested entitlements other than Medicaid, is projected in two steps. First, spending prior to the automatic spending cuts called for by the enforcement provisions of the *Budget Control Act* (BCA) is projected and, second, the effect of the BCA enforcement is projected through its statutory expiration in 2025. With

¹⁷ Medicare Part B and D premiums and State contributions to Part D are subtracted from the Part B and D spending displayed in the basic financial statement. The total 75-year present value of these subtractions is \$12.4 trillion, or 0.9 percent of GDP.

¹⁸ Christopher J. Truffer, Christian J. Wolfe, and Kathryn E. Rennie, *2016 Actuarial Report on the Financial Condition for Medicaid*, Office of the Actuary, Centers for Medicare and Medicaid Services, United States Department of Health and Human Services, December 2016.

regard to pre-BCA spending: (a) current mandatory spending components that are judged permanent under current policy are assumed to increase by the rate of growth in nominal GDP starting in 2018, implying that such spending will remain constant as a percentage of GDP¹⁹; and (b) projected spending for insurance exchange subsidies starting in 2018 grows with growth in the non-elderly population and with the National Health Expenditure (NHE) projected per enrollee cost growth for other private health insurance for the NHE projection period (through 2026 for the fiscal year 2017 projections), and with growth in per enrollee health care costs as projected for the Medicare program after that period. As discussed in Note 22, there is uncertainty about whether the reductions in health care cost growth projected in the Medicare trustees' report will be fully achieved. Projected exchange subsidy spending as a percentage of GDP remains below the failsafe provision in the ACA that limits this spending to 0.504 percent of GDP.

- **Defense and Non-defense Discretionary Spending:** Through 2021, discretionary spending other than for OCO is dictated by the spending caps and automatic spending cuts called for by the BCA. After 2021, this spending is assumed to grow at the same rate as nominal GDP, and thus plateaus at a long-term level of 5.5 percent of GDP. The BCA reductions are projected to reduce the present value of spending by \$0.3 trillion through 2021, and by an additional \$4.6 trillion between 2022 and 2092 because of the lower base spending in 2021. Projected OCO spending, which is not subject to the caps, is assumed to grow from the level in the most recent year at the same rate as nominal GDP. To illustrate uncertainty, present value calculations under alternative discretionary growth scenarios are presented in the "Alternative Scenarios" RSI section.
- **Receipts (Other than Social Security and Medicare Payroll Taxes):** It is assumed that individual income taxes will equal the same share of wages and salaries as in the current law baseline projection in the Administration's latest Budget. That baseline accords with current policy as defined above, including the tendency of effective tax rates to increase as growth in incomes per capita outpaces inflation (also known as "bracket creep"). After reaching about 22 percent of wages and salaries in 2024, individual income taxes increase gradually to 29 percent of wages and salaries in 2092 as real taxable incomes rise over time and an increasing share of total income is taxed in the higher tax brackets. The ratio of all other receipts combined to GDP is projected to remain at 3.6 percent of GDP, based on a long-run historical average. To illustrate uncertainty, present value calculations under higher and lower individual income tax receipts growth scenarios are presented in the "Alternative Scenarios" section.
- **Debt and Interest Spending:** Interest spending is determined by projected interest rates and the level of outstanding debt held by the public. The long-run interest rate assumptions accord with those in the 2017 Social Security trustees' report.²⁰ The average interest rate over the projection period is 5.1 percent. These rates are also used to convert future cash flows to present values as of the start of fiscal year 2018. Debt at the end of each year is projected by adding that year's deficit and other financing requirements to the debt at the end of the previous year.

The methods described above include one significant revision from those used to produce the fiscal year 2016 projections. As discussed under changes in long-term fiscal projections, OCO spending now grows with GDP from the level of outlays in the most recent fiscal year, rather than being assumed to steadily decline and fully phase out during the first 10 years of the projection period. In the years following enactment of the BCA in 2011, appropriations for OCO – which was exempt from the BCA's discretionary spending limits – were declining as operations in Afghanistan and Iraq phased down. In the last few years, however, appropriations for OCO have stabilized and even increased slightly. The future path of appropriations for OCO is uncertain, but "current policy without change" can no longer be characterized as consistent with phasing OCO funding out entirely.²¹

Departures of Current Policy from Current Law

The long-term fiscal projections are made on the basis of current Federal policy, which in some cases is different from current law. The notable differences between current policy that underlies the projections and current law are: (1) projected spending, receipts, and borrowing levels assume raising or suspending the current statutory limit on Federal debt, (2) continued discretionary appropriations are assumed throughout the projection period, (3) scheduled Social Security and Medicare benefit payments are assumed to occur beyond the projected point of trust fund exhaustion, and (4) many mandatory programs with expiration dates prior to the end of the 75-year projection period are assumed to be reauthorized. As is true in the Medicare trustees' report and in the Statement of Social Insurance, the projections incorporate programmatic changes already scheduled in law, such as the ACA productivity adjustment for non-physician Medicare services and the expiration of certain physician bonus payments in 2025.

¹⁹ This assumed growth rate for other mandatory programs exceeds the growth rate in the most recent OMB and CBO 10-year budget baselines.

²⁰ As indicated in the more detailed discussion of Social Insurance in Note 22 to the financial statements.

²¹ The revised assumption of continued OCO funding in these long-term fiscal projections should not be interpreted as a change in the Administration's proposed future funding levels for OCO. As with other assumptions in the long-term fiscal projections, the OCO assumption is meant to project the implications of current policy without change, rather than to indicate a preference or a prediction of future budget outcomes.

Note 24. Stewardship Land and Heritage Assets

Stewardship land is federally-owned land set aside for the use and enjoyment of present and future generations, and land on which military bases are located. Except for military bases, this land is not used or held for use in general government operations. Stewardship land is land that the government does not expect to use to meet its obligations, unlike the assets listed in the Balance Sheets. Stewardship land is measured in non-financial units such as acres of land and lakes, and the number of National Parks and National Marine Sanctuaries. Examples of stewardship land include national parks, national forests, wilderness areas, and land used to enhance ecosystems for the encouragement of animal and plant species, and nature conservation. This category excludes lands administered by the Bureau of Indian Affairs and held in trust.

The majority of public lands that are under the management of DOI were acquired by the government during the first century of the Nation's existence between 1781 and 1867.

Stewardship land is used and managed in accordance with the statutes authorizing acquisition or directing use and management. Additional detailed information concerning stewardship land, such as agency stewardship policies, physical units by major categories, and the condition of stewardship land, can be obtained from the financial statements of DOI, DOD, TVA, and USDA.

Heritage assets are government-owned assets that have one or more of the following characteristics:

- Historical or natural significance;
- Cultural, educational, or artistic importance; and/or
- Significant architectural characteristics

The cost of heritage assets often is not determinable or relevant to their significance. Like stewardship land, the government does not expect to use these assets to meet its obligations. The most relevant information about heritage assets is non-financial. The public entrusts the government with these assets and holds it accountable for their preservation. Examples of heritage assets include the Mount Rushmore National Memorial and Yosemite National Park. Other examples of heritage assets include the Declaration of Independence, the U.S. Constitution, and the Bill of Rights preserved by the National Archives. Also included are national monuments/structures such as the Vietnam Veterans Memorial, the Jefferson Memorial, and the Washington Monument, as well as the Library of Congress. Many other sites such as battlefields, historic structures, and national historic landmarks are placed in this category, as well.

Many laws and regulations govern the preservation and management of heritage assets. Established policies by individual federal agencies for heritage assets ensure the proper care and handling of the assets under their control and preserve these assets for the benefit of the American public.

Some heritage assets are used both to remind us of our heritage and for day-to-day operations. These assets are referred to as multi-use heritage assets. One typical example is the White House. The cost of acquisition, betterment, or reconstruction of all multi-use heritage assets is capitalized as general Property, Plant, and Equipment (PP&E) and is depreciated.

The government classifies heritage assets into two broad categories: collection type and non-collection type. Collection type heritage assets include objects gathered and maintained for museum and library collections. Non-collection type heritage assets include national wilderness areas, wild and scenic rivers, natural landmarks, forests, grasslands, historic places and structures, memorials and monuments, buildings, national cemeteries, and archeological sites.

This discussion of the government's heritage assets is not exhaustive. Rather, it highlights significant heritage assets reported by federal agencies. Please refer to the individual financial statements of the DOC, VA, DOT, State, DOD, as well as websites for the Library of Congress (<https://loc.gov>), the Smithsonian Institution (<https://si.edu>), and the Architect of the Capitol (<https://aoc.gov>) for additional information on multi-use heritage assets, agency stewardship policies, and physical units by major categories.

Note 25. Subsequent Events

Disaster Relief

In August and September of 2017, Hurricanes Harvey, Irma, and Maria struck the continental United States, Puerto Rico and the U.S. Virgin Islands. While the full future effect of these disasters is still unknown, there will be an impact on some federal government entities as a result in assisting these areas as they strive to recover. The fiscal year 2017 financial statements did not reflect any liabilities for additional disaster relief amounts that may be authorized by legislation enacted after September 30, 2017. The SBA has begun to increase its rate of administrative spending as it conducts its disaster response. This spending is consistent with the Agency's experience in responding to prior disasters. The SBA could experience future variations in the performance of existing disaster and business loan portfolios as businesses in the affected areas strive to recover.

Congress enacted the Additional Supplemental Appropriations for Disaster Relief Requirements Act of 2017 (Pub.L. 115-72) on October 26, 2017 as a result of the hurricanes. This Act provides Federal Emergency Management Agency's (FEMA) Disaster Relief Fund with an additional \$13.8 billion for response and recovery activity, and FEMA's Disaster Assistant Direct Loan Program \$4.9 billion for direct loans to assist local governments in providing essential services. The act also provides debt relief and additional borrowing authority for the National Flood Insurance Program (NFIP) by canceling \$16.0 billion of the NFIP's debt to Treasury.

Statutory Debt Limit

As of September 30, 2017, debt subject to the statutory debt limit was \$20,208.6 billion, as stated in Note 11—Federal Debt Securities Held by the Public and Accrued Interest. However, per P.L. 115-56, the statutory debt limit was temporarily suspended through December 8, 2017. Effective December 9, 2017, the statutory debt limit was set at \$20,456.0 billion and on Monday, December 11, 2017, the Secretary of the Treasury notified the Congress that the statutory debt limit would be reached on or after that day. Treasury began to depart from its normal debt management procedures and invoke legal authorities to avoid exceeding the statutory debt limit on December 11, 2017. See Note 11—Federal Debt Securities Held by Public and Accrued Interest for further information.

Tax Reform

As stated in Note 23, the Statement of Long-Term Fiscal Projections is based on current policy that was in effect on September 30, 2017, and does not reflect legislation enacted after that date. Therefore, such projections do not reflect legislation enacted subsequent to September 30 that changes policy that was in effect as of the end of the fiscal year. Subsequent to the end of the fiscal year, and after the preparation of the long-term fiscal projections (LTFP), Congress passed and on December 22, 2017, the President signed the *Tax Cuts and Jobs Act* (P.L. 115-97), which enacts comprehensive reforms to the tax code. The Joint Committee on Taxation (JCT) estimated that the outlays and receipt effects of the enacted law will increase deficits from 2018 through 2027 by \$1.5 trillion, primarily due to lower tax receipts. According to the JCT estimates, the deficit effects peak at 1.4 percent of GDP in 2019 and fall to 0.4 percent of GDP by 2025, after which many of the provisions in the bill affecting individual income taxes expire. The JCT also provided supplemental estimates of the macroeconomic effect of the law that indicated the tax changes would boost GDP growth, producing increased receipts that would offset a significant portion of the law's effect on the deficit. The Statement of LTFP and Note 23 in next year's *Financial Report* will incorporate the effects of the law on the long-range receipt projection, based on an updated economic forecast from the Social Security trustees that reflects the tax law and other economic developments in the period since the previous forecast was prepared. At the time the *Financial Report* was issued, management had not assessed the impact of the *Tax Cuts and Jobs Act* on the Statement of LTFP.

GSEs

On December 22, 2017, the Department of the Treasury and FHFA agreed to modify the Senior Preferred Stock Purchase Agreements (SPSPAs) between Treasury and the GSEs to increase the capital reserve amount for each GSE to \$3 billion, effective with the December 2017 dividend payment. Absent the agreement, the GSEs' capital reserves would have declined to zero on January 1, 2018. In exchange for the increase in the capital reserve, Treasury's liquidation preference in each GSE increased by \$3 billion on December 31, 2017.

The reduction in the U.S. corporate income tax rate resulting from the enactment of the *Tax Cuts and Jobs Act* on December 22, 2017, required that each of Fannie Mae and Freddie Mac record a reduction in the value of their deferred tax assets in the quarter in which the legislation was enacted, impacting potential future draws. The funding draws and the associated amounts are expected to be realized in March 2018. Refer to Note 8—Investments in Government Sponsored Enterprises for additional information.

United States Government Required Supplementary Information (Unaudited) For the Fiscal Years Ended September 30, 2017, and 2016

The Sustainability of Fiscal Policy

One of the important purposes of the *Financial Report* is to help citizens and policymakers assess whether current fiscal policy is sustainable and, if it is not, the urgency and magnitude of policy reforms necessary to make fiscal policy sustainable. A sustainable policy is one where the ratio of debt held by the public to GDP (the debt-to-GDP ratio) is ultimately stable or declining.

As discussed below, the projections in this report indicate that current policy is not sustainable¹. If current policy is left unchanged, the projections show the debt-to-GDP ratio will fall about 4 percentage points between 2017 and 2023 before commencing a steady rise, exceeding its 2017 level by 2029, exceeding 100 percent by 2037, and reaching 297 percent in 2092. For comparison, under the 2016 projections, the debt-to-GDP ratio fell about 6 percentage points between 2016 and 2024 before commencing a steady rise, exceeding its 2016 level by 2030, exceeding 100 percent by 2039, and reaching 252 percent in 2091.

These conclusions are rooted in the projected trends in receipts, spending, and deficits in the context of current law and policy, although, as described in the following pages, there is considerable uncertainty surrounding these projections. The projections are on the basis of policies currently in place and are neither forecasts nor predictions. Changes in policy – from

¹The projections in this report do not reflect the Tax Cuts and Jobs Act (P.L. 115-97), which was enacted on December 22, 2017. For more information on the Tax Cuts and Jobs Act, see Note 25. Subsequent Events.

sweeping changes such as major reform of the tax system, to more routine developments such as changes in aggregate funding for discretionary programs – could have a significant effect on eventual fiscal outcomes.

Current Policy Projections for Primary Deficits

A key determinant of growth in the debt-to-GDP ratio and hence fiscal sustainability is the ratio of the primary deficit-to-GDP. The primary deficit is the difference between non-interest spending and receipts, and the primary deficit-to-GDP ratio is the primary deficit expressed as a percent of GDP. As shown in Chart 1, the primary deficit-to-GDP ratio spiked during 2009 through 2012 due to the 2008-09 financial crisis and the ensuing severe recession, as well as the increased spending and temporary tax reductions enacted to stimulate the economy and support recovery. These elevated primary deficits resulted in a sharp increase in the ratio of debt to GDP, which rose from 39 percent at the end of 2008 to 70 percent at the end of 2012. As an economic recovery took hold, the primary deficit ratio fell, averaging 1.9 percent of GDP over 2013 through 2017. This deficit level was still high enough that the debt held by the public increased further relative to GDP, ending 2017 at 76 percent. The primary deficit is projected to shrink further in the next few years as the discretionary spending limits called for in the *Budget Control Act of 2011* (BCA) remain in effect and the economic recovery boosts tax receipts. After 2021, however, increased spending for Social Security and health programs due in part to the continued retirement of the baby boom generation is projected to result in increasing primary deficits that reach 1.1 percent of GDP in 2027. The primary deficit peaks at 2.1 percent of GDP in 2037 and 2038, gradually decreases beyond that point as the aging of the population continues at a slower pace, and reaches 0.6 percent in 2088 through 2092.

Trends in the primary deficit are heavily influenced by tax receipts. The receipt share of GDP was markedly depressed in 2009 through 2012 because of the recession and tax reductions enacted as part of the *2009 American Recovery and Reinvestment Act* (ARRA) and the *Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010*. The share has increased in subsequent years and was 17.2 percent in 2017, similar to its 30-year average of 17.3 percent due to continued economic growth and the higher tax rates enacted under the *American Tax Relief Act (ATRA) of 2012*. Receipts are projected to grow slightly more rapidly than GDP over the projection period as increases in real (i.e., inflation-adjusted) incomes cause more taxpayers and a larger share of income to fall into the higher individual income tax brackets. Other possible paths for the receipts-to-GDP ratio and the implications for projected debt held by the public are analyzed in the “Alternative Scenarios” section.

On the spending side, the non-interest spending share of GDP is projected to stay at or below its current level of about 19 percent until 2025, and to then rise gradually to 21.5 percent of GDP in 2037 and 21.8 percent of GDP in 2070 through 2092. Slight reductions in the non-interest spending share of GDP over the next few years are mostly due to the caps on discretionary spending which hold growth in discretionary spending below GDP growth. The subsequent increases are principally due to faster growth in Medicare, Medicaid, and Social Security spending (see Chart 1). The aging of the baby boom generation over the next 25 years, among other factors, is projected to increase the Social Security, Medicare, and Medicaid spending shares of GDP by about 1.1 percentage points, 1.5 percentage points, and 0.5 percentage points, respectively. After 2042, the Social Security spending share of GDP remains relatively stable, while the combined Medicare and Medicaid spending share of GDP continues to increase, albeit at a slower rate, due to projected increases in health care costs.

Current Policy Projections for Debt and Interest Payments

The primary deficit projections in Chart 1, along with projections for interest rates and GDP, are the principal determinants of the projections for the debt-to-GDP ratio that are shown in Chart 2. That ratio was 76 percent at the end of fiscal year 2017, and under current policy is projected to be 74 percent in 2027, 136 percent in 2047, and 297 percent in 2092. The continuous rise of the debt-to-GDP ratio after 2023 indicates that current policy is unsustainable.

The change in debt held by the public from one year to the next is approximately equal to the budget deficit, the difference between total spending and total receipts.² Total spending is non-interest spending plus interest spending. Chart 3 shows that the rapid rise in total spending and the unified deficit is almost entirely due to projected interest payments on the growing debt. As a percent of GDP, interest spending was 1.4 percent in 2017, and under current policy is projected to reach 5.1 percent in 2037 and 15.1 percent in 2092.

² The change in debt each year is also affected by certain transactions not included in the budget deficit, such as changes in Treasury’s cash balances and the non-budgetary activity of Federal credit financing accounts. These transactions are assumed to hold constant at about 0.4 percent of GDP each year, with the same effect on debt as if the primary deficit was higher by that amount.

Another way of viewing the change in the financial outlook in this year's report relative to previous years' reports is in terms of the projected debt-to-GDP ratio in 2090, the last year of the projection period in the FY 2015 report. This ratio is projected to reach 289 percent in the fiscal year 2017 projections, which compares with 249 percent projected in the fiscal year 2016 projections and 223 percent projected in the fiscal year 2015 projections.³

The Cost of Delay in Closing the 75-Year Fiscal Gap

The longer policy action to close the fiscal gap is delayed, the larger the post reform primary surpluses must be to achieve the target debt-to-GDP ratio at the end of the 75-year period. This can be illustrated by varying the years in which reforms closing the fiscal gap are initiated while holding the target ratio of debt to GDP in 2092 equal to the 2017 ratio (76 percent). Three reforms are considered, each one beginning in a different year, and each one increasing the primary surplus relative to current policy by a fixed percent of GDP starting in the reform year. The analysis shows that the longer policy action is delayed, the larger the post-reform primary surplus must be to bring the debt-to-GDP ratio to 76 percent of GDP in 2092. Future generations are harmed by delays in policy changes because delay necessitates higher primary surpluses during their lifetimes, and those higher primary surpluses must be achieved through some combination of lower spending and higher taxes and other receipts.

As previously shown in Chart 1, under current policy, primary deficits occur throughout the projection period. Table 1 shows primary surplus changes necessary to make the debt-to-GDP ratio in 2092 equal to its level in 2017 under each of the three policies. If reform begins in 2018, then it is sufficient to raise the primary surplus share of GDP by 2.0 percentage points in every year between 2018 and 2092 in order for the debt-to-GDP ratio in 2092 to equal its level in 2017 (76 percent). This policy raises the average 2018-2092 primary surplus-to-GDP ratio from -1.2 percent to +0.8 percent.

³ For further information on changes from the 2015 projections, see the Required Supplementary Information in the 2016 *Financial Report*.

Table 1
Costs of Delaying Fiscal Reform

Timing of Reforms	Required Change in Average Primary Surplus
Reform in 2018 (No Delay)	2.0 percent of GDP between 2018 and 2092
Reform in 2028 (Ten-Year Delay)	2.4 percent of GDP between 2028 and 2092
Reform in 2038 (Twenty-Year Delay) .	3.0 percent of GDP between 2038 and 2092

Note: Reforms taking place in 2017, 2027, and 2037 from the 2016 Financial Report were 1.6, 1.9, and 2.4 percent of GDP, respectively.

In contrast to a reform that begins immediately, if reform begins in 2028 or 2038, then the primary surpluses must be raised by 2.4 percent and 3.0 percent of GDP, respectively, in order for the debt-to-GDP ratio in 2092 to equal 76 percent. The difference between the primary surplus increase necessary if reform begins in 2028 and 2038 (2.4 and 3.0 percent of GDP, respectively) and the increase necessary if reform begins in 2018 (2.0 percent of GDP) is a measure of the additional burden policy delay would impose on future generations. The costs of delay are due to the additional debt that accumulates between 2017 and the year reform is initiated, in comparison to the scenario in which reform begins immediately.

Alternative Scenarios

The long-run outlook for the budget is extremely uncertain. This section illustrates this inherent uncertainty by presenting alternative scenarios for the growth rate of health care costs, interest rates, discretionary spending, and receipts. (Not considered here are the effects of alternative assumptions for long-run trends in birth rates, mortality, and immigration.)

The population is aging rapidly and will continue to do so over the next several decades, which puts pressure on programs such as Social Security, Medicare, and Medicaid. A shift in projected fertility, mortality, or immigration rates could have important effects on the long-run projections. Higher-than-projected immigration, fertility, or mortality rates would improve the long-term fiscal outlook. Conversely, lower-than-projected immigration, fertility, or mortality rates would result in deterioration in the long-term fiscal outlook.

Effect of Changes in Health Care Cost Growth

One of the most important assumptions underlying the projections is the future growth of health care costs. These future growth rates – both for health care costs in the economy generally and for federal health care programs such as Medicare, Medicaid, and ACA exchange subsidies – are highly uncertain. In particular, enactment of the ACA in 2010 and the *Medicare Access and CHIP Reauthorization Act (MACRA)* in 2015 established cost controls for Medicare hospital and physician payments whose long-term effectiveness is still to be demonstrated. The Medicare spending projections in the long-term fiscal projections are based on the projections in the 2017 Medicare Trustees’ Report, which assume the ACA and MACRA cost control measures will be effective in producing a substantial slowdown in Medicare cost growth. As discussed in Note 22—Social Insurance, the Medicare projections are subject to much uncertainty about the ultimate effects of these provisions to reduce health care cost growth. For the long-term fiscal projections, that uncertainty also affects the projections for Medicaid and exchange subsidies, because the cost per beneficiary in these programs is assumed to grow at the same reduced rate as Medicare cost growth per beneficiary.

As an illustration of the dramatic effect of variations in health care cost growth rates, Table 2 shows the effect on the size of reforms necessary to close the fiscal gap of per capita health care cost growth rates that are one percentage point higher or two percentage points higher than the growth rates in the base projection, as well as the effect of delaying closure of the fiscal gap.⁴ As indicated earlier, if reform is initiated in 2018, eliminating the fiscal gap requires that the 2018-2092 primary surplus increase by an average of 2.0 percent of GDP in the base case. However, that figure increases to 5.0 percent of GDP if per capita health cost growth is assumed to be 1 percentage point higher, and 10.0 percent of GDP if per capita

⁴ The base case health cost growth rates are derived from the projections in the 2017 Medicare trustees’ report. These projections are summarized and discussed in Note 22 (see Table 1B in particular) and the “Medicare Projections” section of the RSI for the SOSI.

health cost growth is 2 percentage points higher. The cost of delaying reform is also increased if health care cost growth is higher, due to the fact that debt accumulates more rapidly during the period of inaction. For example, the lower part of Table 2 shows that delaying reform initiation from 2018 to 2028 requires that 2028-2092 primary surpluses be higher by an average of 0.4 percent of GDP in the base case, 1.0 percent of GDP if per capita health cost growth is 1 percentage point higher, and 1.9 percent of GDP if per capita health cost growth is 2 percentage points higher. The dramatic deterioration of the long-run fiscal outlook caused by higher health care cost growth shows the critical importance of managing health care cost growth.

Table 2			
Impact of Alternative Health Cost Scenarios on Cost of Delaying Fiscal Reform			
Scenario	Primary Surplus Increase (% of GDP)		
	Starting in:		
	2018	2028	2038
Base Case.....	2.0	2.4	3.0
1% pt. higher per person health cost growth.....	5.0	6.0	7.4
2% pt. higher per person health cost growth.....	10.0	11.9	14.7
	Change in Primary Surplus Increase if Reform is Delayed From 2018 to:		
		2028	2038
Base Case.....		0.4	1.0
1% pt. higher per person health cost growth.....		1.0	2.4
2% pt. higher per person health cost growth.....		1.9	4.8

NOTE: Increments may not equal the subtracted difference of the components due to rounding.

Effects of Changes in Interest Rates

A higher debt-to-GDP ratio is likely to increase the interest rate on Government debt, making it more costly for the Government to service its debt. Table 3 displays the effect of several alternative scenarios using different nominal (and real) interest rates than assumed in the base case on the size of reforms to close the fiscal gap as well as the effect of delaying closure of the fiscal gap. If reform is initiated in 2018, eliminating the fiscal gap requires that the 2018-2092 primary surplus increase by an average of 2.0 percent of GDP in the base case, 2.6 percent of GDP if the interest rate is 1.0 percentage point higher in every year, and 1.3 percent of GDP if the interest rate is 1.0 percentage point lower in every year. The cost of delaying reform is also increased if interest rates are higher, due to the fact that interest paid on debt accumulates more rapidly during the period of inaction. For example, the lower part of Table 3 shows that delaying reform initiation from 2018 to 2028 requires that 2028-2092 primary surpluses be higher by an average of 0.4 percent of GDP in the base case, 0.7 percent of GDP if the interest rate is 1.0 percentage point higher in every year, and 0.2 percent of GDP if the interest rate is 1.0 percentage point lower in every year.

Table 3
Impact of Alternative Interest Rate Scenarios on Cost of Delaying Fiscal Reform

Scenario	Primary Surplus Increase (% of GDP) Starting in:		
	2018	2028	2038
Base Case: Average of 5.1 percent over 75 years.....	2.0	2.4	3.0
1.0 percent higher interest rate in each year.....	2.6	3.3	4.4
1.0 percent lower interest rate in each year.....	1.3	1.5	1.8
	Change in Primary Surplus Increase if Reform is Delayed From 2018 to:		
	2028	2038	
Base Case: Average of 5.1 percent over 75 years.....	0.4	1.0	
1.0 percent higher interest rate in each year.....	0.7	1.7	
1.0 percent lower interest rate in each year.....	0.2	0.5	

NOTE: Increments may not equal the subtracted difference of the components due to rounding.

Effects of Changes in Discretionary Spending Growth

The growth of discretionary spending has a large impact on long-term fiscal sustainability. The current base projection for discretionary spending assumes that discretionary spending stays within the statutory caps that apply through 2021, and grows with GDP after that point. The implications of two alternative scenarios are shown in Table 4. The first alternative scenario allows discretionary spending to grow with inflation and population after 2021 so as to hold discretionary spending constant on a real per capita basis. (This growth rate assumption is slower than growth with GDP but is still higher than the standard 10-year budget baseline assumption, which assumes that discretionary spending grows with inflation but not with population.) The second alternative scenario sets discretionary spending from 2018 to 2021 to levels consistent with the path established prior to the cap reductions required by the failure of the Joint Select Committee on Deficit Reduction, and then grows discretionary spending with GDP from that point forward. As shown in Table 4, if discretionary spending grows with inflation and population, eliminating the fiscal gap requires that the 2018-2092 primary surplus increase by an average of 0.3 percent of GDP. If discretionary spending rises to the levels prior to Joint Committee sequestration and then grows with GDP, the fiscal gap increases from 2.0 percent of GDP to 2.4 percent of GDP. The cost of delaying reform is greater when discretionary spending levels are higher. Initiating reforms in 2028 requires that the primary surplus increase by an average of 0.4 percent of GDP per year in the base case, and increase by 0.5 percent of GDP if discretionary levels return to pre-Joint Committee sequestration levels in 2018. If delayed until 2038, the primary surplus must increase by an average of 1.0 percent of GDP in the base case, and increase by 1.1 percent of GDP at pre-sequestration levels.

Table 4
Impact of Alternative Discretionary Spending Growth Scenarios on Cost of Delaying Fiscal Reform

Scenario	Primary Surplus (% of GDP) Starting		
	2018	2028	2038
Base Case: Discretionary spending growth with GDP after 2021.....	2.0	2.4	3.0
Growth with inflation and population after 2021.....	0.3	0.3	0.4
Reversion in 2018 to pre-Joint Committee sequester levels and growth with GDP after 2021.....	2.4	2.8	3.5
	Change in Primary Increase if Reform is Delayed From 2018 to:		
	2028	2038	
Base Case: Discretionary spending growth with GDP after 2021.....	0.4	1.0	
Growth with inflation and population after 2021.....	-	0.1	
Reversion in 2018 to pre-Joint Committee sequester levels and growth with GDP after 2021.....	0.5	1.1	

NOTE: Increments may not equal the subtracted difference of the components due to rounding.

Effects of Changes in Individual Income Receipt Growth

The growth rate of receipts, specifically individual income taxes, is another key determinant of long-term sustainability. The base projections assume growth in individual income taxes over time to account primarily for the slow shift of individuals into higher tax brackets due to real wage growth (“real bracket creep”). This assumption approximates the long-term historical growth in individual income taxes relative to wages and salaries and is consistent with current tax code policy without change, as future legislation would be required to prevent real bracket creep. As an illustration of the effect of variations in individual income tax growth, Table 5 shows the effect on the size of reforms necessary to close the fiscal gap and the effect of delaying closure of the fiscal gap if long-term receipt growth as a share of wages and salaries is 0.1 percentage point higher, than the base case, as well as 0.1 percentage point lower than the base case. If reform is initiated in 2018, eliminating the fiscal gap requires that the 2018-2092 primary surplus increase by an average of 2.0 percent of GDP in the base case, only 0.9 percent of GDP if receipt growth is 0.1% higher, but 3.1 percent of GDP if receipt growth is 0.1% lower. The cost of delaying reform is also affected if receipt growth assumptions change, much as was the case in the previous alternative scenarios.

Table 5
Impact of Alternative Revenue Growth Scenarios on Cost of Delaying Fiscal Reform

Scenario	Primary Surplus Increase (% of GDP)		
	Starting in:		
	2018	2028	2038
Base Case: Individual income tax bracket creep of 0.1% of wages and salaries per year.....	2.0	2.4	3.0
0.2% of wages and salaries per year after 2027.....	0.9	1.1	1.4
0.0% of wages and salaries per year after 2027 (no bracket creep)....	3.1	3.6	4.5
	Change in Primary Surplus Increase if Reform is Delayed From 2018 to:		
	2028	2038	
Base Case: Individual income tax bracket creep of 0.1% of wages and salaries per year.....		0.4	1.0
0.2% of wages and salaries per year after 2027.....		0.2	0.4
0.0% of wages and salaries per year after 2027 (no bracket creep).....		0.6	1.5

NOTE: Increments may not equal the subtracted difference of the components due to rounding.

Fiscal Projections in Context

In this report, a sustainable fiscal policy has been defined as one where the Federal debt-to-GDP ratio is stable or declining. However, this definition does not indicate what a sustainable debt-to-GDP ratio might be. Any particular debt ratio is not the ultimate goal of fiscal policy. Rather, the goals of fiscal policy are many. They include financing public goods, such as infrastructure and government services; promoting a strong and growing economy; and managing the debt so that it is not a burden on future generations. These goals are interrelated, and readers should consider how policies intended to affect one might depend on or affect another.

This report shows that current policy is not sustainable. In evaluating policies that could make policy sustainable, note that debt may play roles in both facilitating and hindering a healthy economy. For example, Government deficit spending supports demand and allows economies to emerge from recessions more quickly. Debt may also be a cost-effective means of financing capital investment that promotes future economic growth, which may in turn make future debt levels more manageable. However, economic theory also suggests that high levels of debt may contribute to higher interest rates, leading to lower private investment and a smaller capital stock which the economy can use to grow. Unfortunately, it is unclear what debt-to-GDP ratio would be sufficiently high to produce these negative outcomes, or whether the key concern is the level of debt per se, or a trend that shows debt increasing over time.

While several empirical studies have attempted to discern a definite relationship between debt and economic growth from the past experience of countries, the evidence is mixed. One study suggested that as advanced countries' debt-to-GDP ratios exceeded 90 percent it had significant negative consequences for real GDP growth through rising interest rates, crowding out of private investment, and reduced capital formation.⁵ Real GDP growth is generally lower by about 1 percent when the countries' debt-to-GDP ratios are above 90 percent relative to the times when they are below 90 percent.⁶ However,

⁵ Reinhart, Carmen M., and Kenneth S. Rogoff. 2010. "Growth in a Time of Debt." *American Economic Review*, 100(2): 573-78.

⁶ Errata: "Growth in a Time of Debt," Carmen M. Reinhart and Kenneth S. Rogoff. Harvard University, 2013.

after removing sample countries with very high indebtedness – those with debt-to-GDP ratios of more than 120 percent – and very low indebtedness – those with debt-to-GDP ratios of less than 30 percent – the negative relationship between growth and debt is difficult to determine. Another study reports that differences in average GDP growth in countries with debt-to-GDP ratios between 30-60 percent, 60-90 percent, and 90-120 percent cannot be statistically distinguished.⁷ Some countries with high debt-to-GDP ratios have been observed to experience lower-than-average growth, while other countries with similarly high debt ratios have continued to enjoy robust growth. Analogously, low debt-to-GDP ratios are no guarantee of strong economic growth. Moreover, the direction of causality is unclear. High debt may undermine growth through increased interest rates and lower business confidence, or low growth may contribute to high debt by depressed tax revenues and increased deficit spending on social safety net programs.

Nevertheless, to put the current and projected debt-to-GDP ratios in context, it is instructive to examine how the United States experience compares with that of other countries. The United States Government's debt as a percentage of GDP is relatively large compared with central government debt of other countries, but far from the largest among developed countries. Based on historical data as reported by the International Monetary Fund (IMF) for 13 select countries, the debt-to-GDP ratio in 2015 ranged from 0.2 percent of GDP to 100.6 percent of GDP.⁸ The United States is not included in this set of statistics, which underscores the difficulty in calculating debt ratios under consistent definitions, but the IMF does report a similar debt statistic for the United States as 84 percent of GDP.⁹ Despite using consistent definitions where available, these debt measures are not strictly comparable due to differences in the share of government debt that is debt of the central government, how government responsibilities are shared between central and local governments, how current policies compare with the past policies that determine the current level of debt, and how robustly each economy grows.

The historical experience of the U.S. may also provide some perspective. As Chart 4 shows, the debt-to-GDP ratio was highest in the 1940s, following the debt buildup during World War II. In the projections in this report, the U.S. would reach the previous peak debt ratio in 2039. However, the origins of current and future Federal debt are quite different from the wartime debt of the 1940s, which limits the pertinence of past experience.

⁷ Herndon, Thomas, Michael Ash, and Robert Pollard, "Does High Public Debt Consistently Stifle Economic Growth? A Critique of Reinhart and Rogoff," *Cambridge Journal of Economics*, 2013.

⁸ Government Finance Statistics Yearbook, Main Aggregates and Balances, available at <https://data.imf.org>. Data is for D1 debt liabilities for the central government, excluding social security funds.

⁹ Data is for D1 debt liabilities for the central government, including social security funds. For the few countries where both central government debt ratios (excluding and including social security funds) are reported, the values are similar.

As the cross-country and historical comparisons suggest, there is a very imperfect relationship between the current level of central government debt and the sustainability of overall government policy. Past accrual of debt is certainly important, but current policies and their implications for future debt accumulation are as well.

Conclusion

The past nine years saw debt held by the public nearly double as a share of GDP, bringing it to a level not seen since shortly after World War II. The projections in this *Financial Report* indicate that if policy remains unchanged, the debt-to-GDP ratio will hold roughly stable over the next decade but then begin a steady increase that soon far exceeds historical levels and continues throughout the projection period and beyond. This implies that current policies are not sustainable and must ultimately change. Subject to the important caveat that policy changes are not so abrupt that they slow economic growth, the sooner policies are put in place to avert these trends, the smaller are the adjustments necessary to return the Nation to a sustainable fiscal path, and the lower the burden of the debt will be to future generations.

Social Insurance

The social insurance programs consisting of Social Security, Medicare, Railroad Retirement, and Black Lung were developed to provide income security and health care coverage to citizens under specific circumstances as a responsibility of the Government. Because taxpayers rely on these programs in their long-term planning, social insurance program information should indicate whether the current statutory provisions of the programs can be sustained, and more generally what effect these provisions likely have on the Government's financial condition. The resources needed to run these programs are raised through taxes and fees. Eligibility for benefits depends in part on earnings and time worked by the individuals. Social Security benefits are generally redistributed intentionally toward lower-wage workers (i.e., benefits are progressive). In addition, each social insurance program has a uniform set of eligibility events and schedules that apply to all participants.

Social Security and Medicare

Social Security

The Federal Old Age and Survivors Insurance (OASI) Trust Fund was established on January 1, 1940, as a separate account in the Treasury. The Federal Disability Insurance (DI) Trust Fund, another separate account in the Treasury, was established on August 1, 1956. The OASI fund pays cash retirement benefits to eligible retirees and their eligible dependents and survivors, and the much smaller DI fund pays cash benefits to eligible individuals who are unable to work because of medical conditions and certain family members of such eligible individuals. Though the events that trigger benefit payments are quite different, both trust funds have the same dedicated financing structure: primarily payroll taxes and income taxes on benefits. All financial operations of the OASI and DI Programs are handled through these respective funds. The two funds are often referred to as the combined OASDI Trust Funds. At the end of calendar year 2016, OASDI benefits were paid to approximately 61 million beneficiaries.

The primary financing source for these two funds are taxes paid by workers, their employers, and individuals with self-employment income, based on work covered by the OASDI Program. Currently, employers and employees each pay 6.2 percent of taxable earnings, and the self-employed pay 12.4 percent of taxable earnings. Payroll taxes are levied on wages and net earnings from self-employment up to a specified maximum annual amount, referred to as maximum taxable earnings (\$127,200 in 2017), that increases each year with economy-wide average wages.

Legislation passed in 1984 subjected up to half of OASDI benefits to income tax and allocated the revenue to the OASDI Trust Funds. In 1993 legislation increased the potentially taxed portion of benefits to 85 percent and allocated the additional revenue to the Medicare's Hospital Insurance Trust Fund.

Medicare

The Medicare Program, created in 1965, has two separate trust funds: the Hospital Insurance (HI) Trust Fund (otherwise known as Medicare Part A) and the Supplementary Medical Insurance (SMI) Trust Funds (which consists of the Medicare Part B and Part D¹⁰ accounts). HI pays for acute inpatient hospital services, hospice, and major alternatives to hospitals (skilled nursing services, for example). SMI pays for hospital outpatient services, physician services, and assorted other services and products through the Part B account and for prescription drugs through the Part D account.

Though the events that trigger benefit payments are similar, HI and SMI have different dedicated financing structures. Similar to OASDI, HI is financed primarily by payroll contributions. Currently, employers and employees each pay 1.45 percent of earnings, while self-employed workers pay 2.9 percent of their net earnings. Beginning in 2013, employees and self-employed individuals with earnings above certain thresholds pay an additional HI tax of 0.9 percent on earnings above those thresholds. Other income to the HI Trust Fund includes a small amount of premium income from voluntary enrollees, a portion of the federal income taxes that beneficiaries pay on Social Security benefits (as explained above), and interest credited on Treasury securities held in the HI Trust Fund. As is explained in the next section, these Treasury securities and related interest have no effect on the consolidated statement of governmentwide finances.

For SMI, direct transfers from the General Fund financed 74 percent and 76 percent of 2017 program costs for Parts B and D, respectively. Premiums paid by beneficiaries and, for Part D state transfers, generally financed the remainder of

¹⁰ Medicare legislation in 2003 created the new Part D account in the SMI Trust Fund to track the finances of a new prescription drug benefit that began in 2006. As is the case for Medicare Part B, a little more than three-quarters of revenues to the Part D account will come from future transfers from the General Fund. Consequently, the nature of the relationship between the SMI Trust Fund and the Federal Budget described below is largely unaffected by the presence of the Part D account though the magnitude will be greater.

expenditures. For beneficiaries dually eligible for Medicare and Medicaid, states must pay the Part D account a portion of their estimated foregone drug costs for this population (referred to as state transfers). As with HI, interest received on Treasury securities held in the SMI Trust Fund is credited to the fund. These Treasury securities and related interest have no effect on the consolidated statement of governmentwide finances. See Note 22—Social Insurance, for additional information on Medicare program financing.

Figure 1
Social Security, Medicare, and Governmentwide Finances

Social Security, Medicare, and Governmentwide Finances

The current and future financial status of the separate OASDI, HI, and SMI Trust Funds is the focus of the Social Security and Medicare Trustees’ Reports, a focus that may appropriately be referred to as the “trust fund perspective.” In contrast, the Government primarily uses the budget concept as the framework for budgetary analysis and presentation. It represents a comprehensive display of all federal activities, regardless of fund type or on- and off-budget status, and has a broader focus than the trust fund perspective that may appropriately be referred to as the “budget perspective” or the “governmentwide perspective.” Social Security and Medicare are among the largest expenditure categories of the U.S. federal budget. This section describes in detail the important relationship between the trust fund perspective and the governmentwide perspective.

Figure 1 is a simplified depiction of the interaction of the Social Security and Medicare Trust Funds with the rest of the federal budget.¹¹ The boxes on the left show sources of funding, those in the middle represent the trust funds and other Government accounts, which include the General Fund into which that funding flows, and the boxes on the right show simplified expenditure categories. The figure is intended to illustrate how the various sources of program revenue flow through the budget to beneficiaries. The general approach is to group revenues and expenditures that are linked specifically to Social Security and/or Medicare separately from those for other government programs.

Each of the trust funds has its own sources and types of revenue. With the exception of General Fund transfers to SMI, each of these revenue sources represents revenue from the public that is dedicated specifically for the respective trust fund and cannot be used for other purposes. In contrast, personal and corporate income taxes as well as other revenue go into the

¹¹ The federal budget encompasses all Government financing and is synonymous with a governmentwide perspective.

General Fund and are drawn down for any Government program for which Congress has approved spending.¹² The arrows from the boxes on the left represent the flow of the revenues into the trust funds and other Government accounts.

The heavy line between the top two boxes in the middle of Figure 1 represents intragovernmental transfers to the SMI Trust Fund from other Government accounts. The Medicare SMI Trust Fund is shown separately from the two Social Security Trust Funds (OASI and DI) and the Medicare HI Trust Fund to highlight the unique financing of SMI. Currently, SMI is the only one of the programs that is funded through transfers from the General Fund, which is part of the other Government accounts (the SMI Part D account also receives transfers from the states). The direct transfers finance roughly three-fourths of SMI Program expenses. The transfers are automatic; their size depends on how much the program requires, not on how much revenue comes into the Treasury. If General Fund revenues become insufficient to cover both the mandated transfer to SMI and expenditures on other general Government programs, Treasury has to borrow to make up the difference. In the longer run, if transfers to SMI increase beyond growth in general revenues—and as shown in the Medicare Trustees Report and Chart 5 later in this section, they are projected to increase significantly in coming years—then Congress must either raise taxes, cut other Government spending, reduce SMI benefits, or borrow even more.

The dotted lines between the middle boxes of Figure 1 also represent intragovernmental transfers but those transfers arise in the form of “borrowing/lending” between the Government accounts. Interest credited to the trust funds arises when the excess of program income over expenses is loaned to the General Fund. The vertical lines labeled *Surplus Borrowed* represent these flows from the trust funds to the other Government accounts. These loans reduce the amount the General Fund has to borrow from the public to finance a deficit (or likewise increase the amount of debt paid off if there is a surplus). However, the General Fund has to credit interest on the loans from the trust fund programs, just as if it borrowed the money from the public. The credits lead to future obligations for the General Fund (which is part of the other Government accounts). These transactions are indicated in Figure 1 by the vertical arrows labeled *Interest Credited*. The credits increase trust fund income exactly as much as they increase credits (future obligations) in the General Fund. From the governmentwide standpoint, at least in an accounting sense, these interest credits are a wash.

When the trust funds get the receipts that they loan to the General Fund, these receipts provide additional authority to spend on benefits and other program expenses. The General Fund, in turn, has taken on the obligation of paying interest on these loans every year and repaying the principal when trust fund income from other sources falls below expenditures.

How loans from the trust funds to the General Fund and later repayments of those loans affect tax income and expenditures of the General Fund is uncertain. Two extreme cases encompass the possibilities. At one extreme, each dollar the trust funds loan to the General Fund might reduce borrowing from the public by a dollar at the time the loan is extended, in which case the General Fund could repay all trust fund loans by borrowing from the public without raising the level of public debt above the level that would have occurred in the absence of the loans. At the other extreme, each dollar the trust funds loan to the General Fund might result in some combination of higher General Fund spending and lower General Fund revenues amounting to one dollar at the time the loans are extended, in which case General Fund loan repayments to the trust funds might initially be financed with borrowing from the public but must at some point be financed with a combination of higher General Fund taxes and lower General Fund spending than would have occurred in the absence of the loans. In this latter extreme, trust fund loans result in additional largess (i.e., higher spending and/or lower taxes) in General Fund programs at the time the loans are extended, but ultimately that additional largess is financed with additional austerity (i.e., lower spending and/or higher taxes) in General Fund programs at later dates. The actual impact of trust fund loans to the General Fund and their repayment on General Fund programs is at one of these two extremes or somewhere in between.

Actual dollar amounts roughly corresponding to the flows presented in Figure 1 are shown in Table 1 for fiscal year 2017. In Table 1, revenues from the public (left side of Figure 1) and expenditures to the public (right side of Figure 1) are shown separately from transfers between Government accounts (middle of Figure 1). Note that the transfers (\$311.7 billion) and interest credits (\$96.3 billion) received by the trust funds appear as negative entries under “All Other” and are thus offsetting when summed for the total budget column. These two intragovernmental transfers are the key to the differences between the trust fund and budget perspectives.

From the governmentwide perspective, only revenues received from the public (and states in the case of Medicare, Part D) and expenditures made to the public are important for the final balance. Trust fund revenue from the public consists of payroll taxes, benefit taxes, and premiums. For HI, the difference between total expenditures made to the public (\$293.3 billion) and revenues (\$289.0 billion) was \$4.3 billion in 2017, indicating that HI had a relatively small negative effect on the overall budget outcome *in that year*. For the SMI account, revenues from the public (primarily premiums) fell short of total

¹² Other programs also have dedicated revenues in the form of taxes and fees (and other forms of receipt) and there are a large number of dedicated trust funds in the federal budget. Total trust fund receipts account for about 40 percent of total Government receipts with the Social Security and Medicare Trust Funds accounting for about two-thirds of trust fund receipts. For further discussion, see the report issued by the Government Accountability Office, *Federal Trust and Other Earmarked Funds*, GAO-01-199SP, January 2001. In the figure and the discussion that follows, all other programs, including these other dedicated trust fund programs, are grouped under “Other Government Accounts” to simplify the description and maintain the focus on Social Security and Medicare.

expenditures made to the public by \$303.6 billion in 2017, which resulted in a net draw on the overall budget balance in that year. For OASDI, the difference between total expenditures made to the public (\$944.7 billion) and revenues from the public (\$905.4 billion) was \$39.3 billion in 2017, indicating that OASDI had a negative effect on the overall budget outcome in that year. Combined OASDI payroll and benefit tax revenues were increased by \$46.0 billion in fiscal year 2017.

The trust fund perspective is captured in the bottom section of each of the three trust fund columns. For HI, total revenues exceeded total expenditures by \$5.3 billion in 2017, as shown at the bottom of the first column. For SMI, total revenues exceeded total expenditures by \$8.3 billion. The total revenue for SMI is \$422.4 billion (\$110.4 + \$312.0), which includes \$312.0 billion transferred from other Government accounts (General Fund). Transfers to the SMI Program from other Government accounts (the General Fund), amounting to about 75 percent of program costs, are obligated under current law and, therefore, appropriately viewed as revenue from the trust fund perspective. For OASDI, total revenues of \$991.9 billion (\$905.4 + \$86.5) exceeded total expenditures of \$944.7 billion by \$47.2 billion. Total revenues for OASDI included \$86.5 billion in transfers from the General Fund, made up of interest credits of \$86.5 billion.

Table 1
Revenues and Expenditures for Medicare and Social Security Trust Funds and the Total Federal Budget for the Fiscal Year ended September 30, 2017

(In billions of dollars)	Trust Funds					Total ¹

Net results for trust fund perspective³	5.3	8.3	47.2	60.8	N/A	N/A

¹ This column is the sum of the preceding two columns and shows data for the total federal budget. The figure \$665.7 was the total federal deficit in fiscal year 2017.

² The OASDI figure includes \$4.5 billion transferred to the Railroad Retirement Board for benefit payments and is therefore an expenditure to the public.

³ Net results are computed as revenues less expenditures.

Notes: Totals may not equal the sum of components due to rounding.

"N/A" indicates not applicable.

Cash Flow Projections

Background

Economic and Demographic Assumptions. The Boards of Trustees¹³ of the OASDI and Medicare Trust Funds provide in their annual reports to Congress short-range (10-year) and long-range (75-year) actuarial estimates of each trust fund. Because of the inherent uncertainty in estimates for 75 years into the future, the Boards use three alternative sets of economic and demographic assumptions to show a range of possibilities. The economic and demographic assumptions used for the most recent set of intermediate projections for Social Security and Medicare are shown in the "Social Security" and "Medicare" sections of Note 22—Social Insurance.

¹³ There are six trustees: the Secretaries of the Treasury (managing trustee), Health and Human Services, and Labor; the Commissioner of the Social Security Administration; and two public trustees who are appointed by the President and confirmed by the Senate for a 4-year term. By law, the public trustees cannot both be members of the same political party.

Worker-to-Beneficiary Ratio. The expenditure projections for both the OASDI and Medicare Programs reflect the aging of the large baby-boom generation, born in the years 1946 to 1964, and its ultimate passing. Under the intermediate assumptions, cost rates are projected to rise rapidly between 2017 and 2035, primarily because the number of beneficiaries rises much more rapidly than the number of covered workers as the baby-boom generation retires. For the most part, current workers pay for current benefits. Due to the lower fertility rates of the baby-boom generation as compared to those of their parents' generation, and the expected low fertility rates of all future generations, there is a relatively smaller number of persons born after the baby boom who will then finance the retirement of the baby-boom generation. Chart 1 shows that in 2016, every OASDI beneficiary had 2.8 workers to pay for his or her benefit. In 2030, however, after the last baby boomer turns 65, there will be only about 2.3 workers per beneficiary. The projected ratio continues to decline until there are just 2.0 workers per beneficiary by 2091. A similar demographic pattern confronts the Medicare Program. The number of workers per HI beneficiary declines from 3.1 in 2016 to 2.4 in 2030, and continues to decline throughout the projection period to 2091, when there are just 2.1 workers per HI beneficiary.

**Chart 1—Number of Covered Workers per OASDI Beneficiary
1970-2091**

Social Security Projections

Income and Expenditures. Chart 2 shows historical values and actuarial estimates of combined OASDI annual noninterest income and expenditures for 1970-2091. The estimates are for the open-group population of all workers and beneficiaries projected to be alive in each year. The expenditure projections in Chart 2 and all subsequent charts assume all scheduled benefits are paid regardless of whether the income and assets are available to finance them.

**Chart 2—OASDI Income (Excluding Interest) and Expenditures
1970-2091**

Annual OASDI cost exceeded noninterest income in 2010 for the first time since 1983. It is projected that cost will continue to exceed noninterest income throughout the 75-year valuation period. Projected OASDI cost increases more rapidly than projected noninterest income through 2037 primarily because the retirement of the baby-boom generation will increase the number of beneficiaries much faster than the number of covered workers increases, as subsequent lower-birth-rate generations replace the baby-boom generation at working ages. From 2038 to 2051, the cost rate (the ratio of program cost to taxable payroll) generally declines because the aging baby-boom generation is gradually replaced at retirement ages by historically low-birth-rate generations. Thereafter, increases in life expectancy cause OASDI cost to increase generally relative to noninterest income, but more slowly than between 2010 and 2037. Nevertheless, total trust fund income, including interest income, is more than sufficient to cover costs through 2021, so trust fund asset reserves continue to grow. Beginning in 2022, cost exceeds total income, and combined OASI and DI Trust Fund reserves diminish until they become depleted in 2034. After trust fund reserve depletion, continuing income is sufficient to support expenditures at a level of 77 percent of program cost for the rest of 2034, declining to 73 percent for 2091. To meet all OASDI cost on a timely basis, the combined OASI and DI Trust Funds need to redeem Treasury securities. To finance this redemption, the government will increase its borrowing from the public, raise taxes (other than OASDI payroll taxes), and/or reduce expenditures (other than OASDI cost).

Income and Expenditures as a Percent of Taxable Payroll. Chart 3 shows annual noninterest income and expenditures expressed as percentages of taxable payroll, commonly referred to as the income rate and cost rate, respectively. Under the intermediate assumptions, demographic factors would by themselves cause the projected cost rate to rise rapidly for the next two decades before leveling off in about 2035. However, the recent recession temporarily depressed taxable earnings and increased the number of beneficiaries, which in turn sharply, but temporarily, increased the cost rate starting in 2009. From a peak in 2013, the cost rate declines through 2017 under the economic recovery and thereafter returns to a gradually rising trend. The projected income rate is stable at about 13 percent throughout the 75-year period.

Chart 3—OASDI Income (Excluding Interest) and Expenditures as a Percent of Taxable Payroll 1970-2091

Income and Expenditures as a Percent of GDP. Chart 4 shows estimated annual noninterest income and expenditures, expressed as percentages of GDP, which is the total value of goods and services produced in the United States. This alternative perspective shows the size of the OASDI Program in relation to the capacity of the national economy to sustain it. In calendar year 2016, OASDI cost was about \$922 billion, which was about 5.0 percent of GDP. The cost of the program (based on current law) rises rapidly to 6.1 by 2037, then declines to 5.9 percent by 2050, and generally increases to 6.1 percent of GDP by 2091. The rapid increase from 2017 to 2035 is projected to occur as baby boomers become eligible for OASDI benefits, lower birth rates result in fewer workers per beneficiary, and beneficiaries continue to live longer. In 2091, expenditures are projected to exceed income by approximately 1.54 percent of GDP. As the economy recovers, Social Security's noninterest income, which reflects scheduled tax rates, remains at its current level of about 4.8 percent of GDP through 2040. Thereafter, noninterest income as a percent of GDP declines gradually, to about 4.6 percent by 2091, because the share of employee compensation provided as non-covered fringe benefits is expected to increase gradually.

as a Percent of GDP
1970-2091**

Sensitivity Analysis. Projections of the future financial status of the OASDI program depend on many demographic and economic assumptions, including fertility, mortality, net immigration, average wages, inflation, and interest rates on Treasury securities. The income will depend on how these factors affect the size and composition of the working population and the level and distribution of wages and earnings. Similarly, the cost will depend on how these factors affect the size and composition of the beneficiary population and the general level of benefits.

Because perfect long-range projections of these factors are impossible and actual experience is likely to differ from the estimated or assumed values of these factors, this section is included to illustrate the sensitivity of the long-range projections to changes in assumptions by analyzing six key assumptions: average annual reduction in death rates, total fertility rate, real-wage differential, Consumer Price Index (CPI) change, net immigration, and real interest rate. For this analysis, the intermediate assumptions are used as the reference point, and each selected assumption is varied individually. The variation used for each individual assumption reflects the levels used for that assumption in the low-cost (Alternative I) and high-cost (Alternative III) projections. For example, when analyzing sensitivity with respect to variation in real wages, income, and expenditure projections using the intermediate assumptions are compared to the outcome when projections are done by changing only the real wage assumption to either low-cost or high-cost alternatives.

The low-cost alternative is characterized by assumptions that improve the financial status of the program (relative to the intermediate assumption) such as slower improvement in mortality (beneficiaries die younger). In contrast, assumptions under the high-cost alternative worsen the financial outlook. All present values are calculated as of January 1, 2017 and are based on estimates of income and cost during the 75-year projection period 2017-2091.

Table 2 shows the effects of changing individual assumptions on the present value of estimated OASDI expenditures in excess of income (the *shortfall* of income relative to expenditures in present value terms). The assumptions are shown in parentheses. For example, if the annual reduction in death rates were changed from 0.77 percent, the intermediate assumption, to 0.42 percent, meaning that people die younger, the shortfall for the period of estimated OASDI income relative to cost would decrease to \$12,976 billion from \$15,357 billion; if the annual reduction were changed to 1.16 percent, meaning that people live longer, the shortfall would increase to \$17,942 billion.

A higher fertility rate means more workers relative to beneficiaries over the projection period, thereby lowering the shortfall relative to the intermediate assumption. Table 2 demonstrates that if the ultimate total fertility rate were changed from 2.0 children per woman, the intermediate assumption, to 1.8 children per woman, the shortfall for the period of estimated OASDI income relative to cost would increase to \$16,683 billion from \$15,357 billion; if the ultimate rate were changed to 2.2 children per woman, the shortfall would decrease to \$13,899 billion.

The annual real-wage differential is the difference between the percentage increases in: (1) the average annual wage in OASDI covered employment; and (2) the average annual Consumer Price Index (CPI). Higher real wage growth results in faster income growth relative to expenditure growth. As shown in Table 2, if the ultimate real-wage differential were changed from 1.20 percentage points, the intermediate assumption, to 0.58 percentage points, the shortfall for the period of estimated OASDI income relative to cost would increase to \$17,629 billion from \$15,357 billion; if the ultimate real-wage differential were changed from 1.20 to 1.82 percentage points, the shortfall would decrease to \$11,928 billion.

Table 2 demonstrates that if the ultimate annual increase in the CPI were changed from 2.6 percent, the intermediate assumption, to 2.0 percent, the shortfall for the period of estimated OASDI income relative to cost would increase to \$15,827 billion from \$15,357 billion; if the ultimate annual increase in the CPI were changed to 3.2 percent, the shortfall would decrease to \$14,876 billion. The seemingly counter-intuitive result that higher CPI increases result in decreased shortfalls (and vice versa) is explained by the time lag between the effects of the CPI changes on taxable payroll and on benefit payments. The effect on taxable payroll due to a greater increase in average wages is experienced immediately, while the effect on benefits is experienced with a lag of about one year. For this reason, larger increases in the CPI cause earnings and income to increase sooner and, therefore, by more each year, than benefits and cost.

Immigration generally occurs at relatively young adult ages, so there is no significant effect on beneficiaries (and, therefore, on benefits) in the early years of the projection period, but the effect on the numbers of workers (and, therefore, on payroll tax income) is immediate. Therefore, even in the early years, the present values, year by year, are generally higher (less negative in later years) for higher net annual immigration. However, the increased payroll taxes for a given year are eventually offset by benefits paid in that year to earlier immigrant cohorts. Therefore, the present values based on the three assumptions about net annual immigration become more similar at the end of the projection period. Table 2 shows that if the intermediate immigration assumptions were changed so that the average level for the 75-year period decreased from 1,286,000 persons to 961,000 persons, the present value of the shortfall for the period of estimated OASDI income relative to cost would increase to \$16,181 billion from \$15,357 billion. If, instead, the immigration assumptions were changed so that net annual immigration would be expected to average 1,623,000 persons, the present value of the shortfall would decrease to \$14,620 billion.

Finally, Table 2 shows the sensitivity of the shortfall to variations in the real interest rate or, in present value terminology, the sensitivity to alternative discount rates assuming a higher discount rate results in a lower present value. If the ultimate real interest rate were changed from 2.7 percent, the intermediate assumption, to 2.2 percent, the shortfall for the

period of estimated OASDI income relative to cost, when measured in present-value terms would increase to \$18,200 billion from \$15,357 billion; if the ultimate annual real interest rate were changed to 3.2 percent, the present-value shortfall would decrease to \$13,089 billion.

Table 2
Present Values of Estimated OASDI Expenditures in Excess of Income
Under Various Assumptions, 2017-2091

(Dollar values in billions; values of assumptions shown in parentheses)

Assumption	Financing Shortfall Range		
	Low	Intermediate	High
Average annual reduction in death rates	12,976 (0.42)	15,357 (0.77)	17,942 (1.16)
Total fertility rate.....	13,899 (2.2)	15,357 (2.0)	16,683 (1.8)
Real wage differential	11,928 (1.82)	15,357 (1.20)	17,629 (0.58)
CPI change.....	14,876 (3.2)	15,357 (2.6)	15,827 (2.0)
Net immigration ¹	14,620 (1,623,000)	15,357 (1,286,000)	16,181 (961,000)
Real interest rate.....	13,089 (3.2)	15,357 (2.7)	18,200 (2.2)

¹ Amounts represent the average annual net immigration over the 75-year projection period.

Medicare Projections

Medicare Legislation. The projections in this year's report are based on current law, with one exception related to the projected depletion of the Medicare Part A Trust Fund, and include the enactment of the *Medicare Access and CHIP Reauthorization Act of 2015* (MACRA; P.L. 114-10), which repealed the sustainable growth rate (SGR) formula that set physician fee schedule payments. While the physician payment updates and new incentives put in place by MACRA avoid the significant short-range physician payment issues that would have resulted from the SGR system approach, they nevertheless raise important long-range concerns. In particular, additional payments of \$500 million per year for one group of physicians and 5-percent annual bonuses for another group are scheduled to expire in 2025, resulting in a significant one-time payment reduction for most physicians. In addition, the law specifies the physician payment update amounts for all years in the future, and these amounts do not vary based on underlying economic conditions, nor are they expected to keep pace with the average rate of physician cost increases. The specified rate updates could be an issue in years when levels of inflation are high and would be problematic when the cumulative gap between the price updates and physician costs becomes large. The gap will continue to widen throughout the projection, and it is estimated that physician payment rates under current law will be lower than they would have been under the SGR formula by 2048. Absent a change in the delivery system or level of

update by subsequent legislation, access to Medicare-participating physicians may become a significant issue in the long term under current law.

Incorporated in these projections is the sequestration of non-salary Medicare expenditures as required by the following laws:

- *Budget Control Act of 2011* (P.L. 112-25, enacted on August 2, 2011), as amended by the *American Taxpayer Relief Act of 2012* (P.L. 112-240, enacted on January 2, 2013);
- *Continuing Appropriations Resolution, 2014* (P.L. 113-67, enacted on December 26, 2013);
- Sections 1 and 3 of P.L. 113-82, enacted on February 15, 2014;
- *Protecting Access to Medicare Act of 2014* (P.L. 113-93, enacted on April 1, 2014); and
- *Bipartisan Budget Act of 2015* (P.L. 114-74, enacted on November 2, 2015).

The sequestration reduces benefit payments by 2 percent from April 1, 2013 through March 31, 2025, and by 4 percent from April 1, 2025 through September 30, 2025. Due to sequestration, non-salary administrative expenses are reduced by an estimated 5 percent from March 1, 2013 through September 30, 2025.

These projections also incorporate the effects of the *Patient Protection and Affordable Care Act*, as amended by the *Health Care and Education Reconciliation Act of 2010*. This legislation, referred to collectively as the *Affordable Care Act* or ACA, contains roughly 165 provisions affecting the Medicare program by reducing costs, increasing revenues, improving benefits, combating fraud and abuse, and initiating a major program of research and development to identify alternative provider payment mechanisms, health care delivery systems, and other changes intended to improve the quality of health care and reduce costs.

The 2017 Medicare Trustees' Report warns that the financial projections for the Medicare program reflect substantial, but very uncertain, cost savings deriving from provisions of the ACA and MACRA that lower increases in Medicare payment rates to most categories of health care providers. Without fundamental change in the current delivery system, these adjustments would probably not be viable indefinitely. It is conceivable that providers could improve their productivity, reduce wasteful expenditures, and take other steps to keep their cost growth within the bounds imposed by the Medicare price limitations. For such efforts to be successful in the long range, however, providers would have to generate and sustain unprecedented levels of productivity gains—a very challenging and uncertain prospect. In view of the factors described above, it is important to note that Medicare's actual future costs are highly uncertain for reasons apart from the inherent challenges in projecting health care cost growth over time.

Changes in Projection Methods. The projections in this year's report, with one exception related to Part A, are based on current law; that is, it is assumed that laws on the books will be implemented and adhered to with respect to scheduled taxes, premium revenues, and payments to providers and health plans. The one exception is that the projections disregard payment reductions that would result from the projected depletion of the Medicare Hospital Insurance (HI) Trust Fund. Under current law, payments would be reduced to levels that could be covered by incoming tax and premium revenues when the HI Trust Fund was depleted.

Total Medicare. Chart 5 shows expenditures and current-law noninterest revenue sources for HI and SMI combined as a percentage of GDP. For 2017, total Medicare expenditures are expected to exceed noninterest revenue, but by only a very small margin, and modest surpluses are projected to continue for 2018 through 2020. Deficits are expected to return in 2021 and to remain for the balance of the projection, as expenditures grow faster than revenue. Under the ACA, beginning in 2013 the HI Trust Fund receives an additional 0.9 percent tax on earnings in excess of \$250,000 for joint tax return filers and \$200,000 for individual tax return filers. As a result of this provision, it is projected that payroll taxes will grow slightly faster than GDP. HI revenue from income taxes on Social Security benefits will gradually increase as a share of GDP as the share of benefits subject to such taxes increases. Beginning in 2009, as HI payroll tax receipts declined due to the recession and general revenue transfers increased, the latter income source became the largest single source of income to the Medicare program as a whole. General revenue transfers to the Part B account increased significantly in 2016, as required by the *Bipartisan Budget Act (BBA)* of 2015 to compensate for premium revenue that was not received in 2016 due to the hold harmless provision, which limited the Part B premium increase for a majority of beneficiaries. After decreasing from 2016 to 2017, general revenues will gradually increase as a share of Medicare financing from 2017 through 2029 and grow to about 48 percent by 2030, stabilizing thereafter. SMI premiums will also grow in proportion to general revenue transfers, placing a growing burden on beneficiaries. For high-income enrollees, SMI premiums began to increase more rapidly in 2011 and will continue to do so as a result of ACA provisions that increase Part D premiums and freeze the income thresholds used to determine Part B and Part D income-related premiums for 2011-2019. MACRA contains further provisions that affect the income-related premium thresholds and that will result in more premium income to Part B and Part D. SMI general revenues currently equal 1.5 percent of GDP and will increase to an estimated 2.7 percent in 2091 under current law.

Chart 5—Total Medicare (HI and SMI) Expenditures and Noninterest Income as a Percent of GDP 1970-2091

Source: https://www.ssa.gov/oact/TRSUM/images/LD_ChartC.html

Medicare, Part A (Hospital Insurance)— Income and Expenditures. Chart 6 shows historical and actuarial estimates of HI annual income (excluding interest) and expenditures for 1970-2091 in nominal dollars. The estimates are for the open-group population.

**Chart 6—Medicare Part A Income (Excluding Interest) and Expenditures
1970-2091**

(In billions of dollars)

Medicare, Part A Income and Expenditures as a Percent of Taxable Payroll. Chart 7 illustrates income (excluding interest) and expenditures as a percentage of taxable payroll over the next 75 years. The projected HI cost rates shown in the 2017 report are lower than those from the 2016 report for all years largely due to lower utilization assumptions for inpatient hospital services, which were primarily based on lower-than-expected utilization in 2016. Since the standard HI payroll tax rates are not scheduled to change in the future under present law, most payroll tax income as a percentage of taxable payroll is estimated to remain constant at 2.90 percent. In addition, starting in 2013, high-income workers pay an additional 0.9 percent of their earnings above \$200,000 (for single workers) or \$250,000 (for married couples filing joint income tax returns). Because these income thresholds are not indexed, over time an increasing proportion of workers will become subject to the additional HI tax rate, and consequently total HI payroll tax revenues will increase steadily as a percentage of taxable payroll. Income from taxation of benefits will also increase as a greater proportion of Social Security beneficiaries become subject to such taxation, since the income thresholds determining taxable benefits are not indexed for price inflation. Thus, as Chart 7 shows the income rate is expected to gradually increase over current levels. As indicated in the chart, the cost rate is projected to decline through 2018, largely due to (i) expenditure growth that was constrained in part by low utilization and low payment updates, and (ii) a rebound of taxable payroll growth from 2007-2009 recession levels. After 2018 the cost rate is projected to rise primarily due to retirements of those in the baby-boom generation and partly due to a projected return to modest health services cost growth. This cost rate increase is moderated by the accumulating effect of the productivity adjustments to provider price updates, which are estimated to reduce annual HI per capita cost growth by an average of 0.8 percent through 2026 and 1.1 percent thereafter. The percentage of expenditures covered by noninterest income is projected to decrease from 88 percent in 2029, the year the HI Trust Fund is projected to be depleted, to 81 percent in 2041, and then to increase to about 88 percent again by the end of the projection period.

**Chart 7—Medicare Part A Income (Excluding Interest) and Expenditures
as a Percent of Taxable Payroll
1970-2091**

Source: https://www.ssa.gov/OACT/TRSUM/images/LD_ChartB.html

Medicare, Part A Income and Expenditures as a Percent of GDP. Chart 8 shows estimated annual noninterest income and expenditures, expressed as percentages of GDP, the total value of goods and services produced in the United States. This alternative perspective shows the size of the HI Program in relation to the capacity of the national economy to sustain it. Under the intermediate assumptions, the HI balance is positive for 2017 through 2020, and then negative thereafter. Annual deficits increase through 2045, and then generally decline thereafter. The gap between expenditure and income shares of GDP widens to 0.42 percent in 2045, and then commences a slight decline, reaching 0.26 percent of GDP in 2091.

Chart 8—Medicare Part A Income (Excluding Interest) and Expenditures as a Percent of GDP 1970-2091

Medicare, Parts B and D (Supplementary Medical Insurance). Chart 9 shows historical and actuarial estimates of Medicare Part B and Part D premiums (and Part D state transfers) as well as expenditures for each of the next 75 years, in dollars. Beneficiary premiums and general revenue contributions for both Part B and Part D are established annually to cover the expected costs for the upcoming year. Should actual costs exceed those anticipated when the financing is determined, future financing rates can include adjustments to recover the shortfall. Likewise, should actual costs be less than those anticipated, the savings would result in lower future financing rates. The gap between program expenditures and revenues from premiums, drug fees, and state transfers grows throughout the projection period. This gap will need to be filled with general revenue transfers.

**Chart 9—Medicare Part B and Part D Premium and State Transfer Income and Expenditures
1970-2091**

(In billions of dollars)

Medicare Part B and Part D Premium as well as State Transfer Income and Expenditures as a Percent of GDP. Chart 10 shows expenditures for the Supplementary Medical Insurance Program over the next 75 years expressed as a percentage of GDP, providing a perspective on the size of the SMI Program in relation to the capacity of the national economy to sustain it. SMI costs are projected to continue to outpace growth in GDP but at a slower rate compared to the last 10 years. Total SMI expenditures amounted to 2.1 percent of GDP in 2016 and are projected to grow to about 3.5 percent of GDP within 25 years and to 3.7 percent by the end of the projection period. The relatively high growth during the period 2017-2026 is due to the continuing retirement of the baby-boom generation, further economic recovery, and modest increases in cost trends. Growth rates are projected to decline during the 2027-2041 period primarily as a result of a deceleration in beneficiary population growth. For the last 50 years of the projection period, cost growth moderates further due to the continued deceleration in beneficiary population growth and lower health care cost growth rate assumptions. To match the faster growth rates for SMI expenditures, beneficiary premiums, along with general revenue contributions, would increase more rapidly than GDP over time but at a slower rate compared to the last 10 years. Average per beneficiary costs for Part B and Part D benefits are projected to increase after 2016 by about 4.2 percent annually. The associated beneficiary premiums—and general revenue financing—would increase by approximately the same rate.

Chart 10—Medicare Part B and Part D Premium and State Transfer Income and Expenditures as a Percent of GDP 1970-2091

Medicare Sensitivity Analysis. This section illustrates the sensitivity of long-range cost and income estimates for the Medicare Program to changes in *selected individual assumptions*. As with the OASDI analysis, the intermediate assumption is used as a reference point, and each selected assumption is varied individually to produce three scenarios. The variation used for each individual assumption reflects the levels used for that assumption in the low-cost and high-cost projections (see description of sensitivity analysis for OASDI). All present values are calculated as of January 1, 2017 and are based on estimates of income and expenditures during the 75-year projection period.

Table 3 shows the net present value of cash flow during the 75-year projection period under three alternative assumptions for the annual growth rate in the aggregate cost of providing covered health care services to beneficiaries. These assumptions are that the ultimate annual growth rate in such costs, relative to taxable payroll, will be 1 percent slower than the intermediate assumptions, the same as the intermediate assumptions, and 1 percent faster than the intermediate assumptions. The assumptions are shown in parentheses. The table demonstrates that if the ultimate growth rate assumption is 1 percentage point lower than the intermediate assumption, the deficit decreases by \$7,194 billion. On the other hand, if the ultimate growth rate assumption is 1 percentage point higher than the intermediate assumption, the deficit increases

substantially by \$11,496 billion. This assumption has a dramatic impact on projected HI cash flow. The present value of the net cash flow under the ultimate growth rate assumption of 1 percentage point lower than the intermediate assumption actually becomes a surplus due to the improved financial outlook for the HI trust fund as a result of the ACA. Several factors, such as the utilization of services by beneficiaries or the relative complexity of services provided, can affect costs without affecting tax income. As the table indicates, the financial status of the HI Trust Fund is extremely sensitive to the relative growth rates for health care service costs.

The fertility rate assumption has a substantial impact on projected HI cash flows. As demonstrated by Table 3, for an increase of 0.2 in the assumed ultimate fertility rate, the projected present value of the HI deficit decreases by approximately \$537 billion, and for a decrease of 0.2 in the assumed ultimate fertility rate, the projected present value of the HI deficit increases by approximately \$486 billion. Under the higher fertility rate assumptions, there will be additional workers in the labor force after 20 years, and many will become subject to the additional HI tax, thereby lowering the deficit proportionately more on a present-value-dollar basis. On the other hand, under the lower fertility rate assumptions, there will be fewer workers in the workforce with a smaller number subject to the additional tax, in turn raising the HI deficit. It is important to point out that if a longer projection period were used, the impact of a fertility rate change would be more pronounced.

Relative to the intermediate case, for an increase in the ultimate real-wage differential assumption of 0.6 percentage points, the deficit—expressed in present-value dollars—decreases by approximately \$2,397 billion. Conversely, for a decrease in the ultimate real-wage differential assumption of 0.6 percentage points, the deficit increases by about \$1,429 billion. When expressed in present-value dollars, faster real-wage growth results in smaller HI cash flow deficits. A higher real-wage differential immediately increases both HI expenditures for health care and wages for all workers. There is a full effect on wages and payroll taxes, but the effect on benefits is only partial, since not all health care costs are wage-related. In practice, faster real-wage growth always improves the financial status of the HI trust fund, regardless of whether there is a small or large imbalance between income and expenditures.

As Table 3 indicates, the change in CPI inflation has an impact when the cash flow is expressed as present values. If the ultimate CPI-increase assumption is changed from 2.6 percent, the intermediate assumption, to 3.2 percent, the deficit decreases by \$1,038 billion. On the other hand, if the ultimate CPI-increase is changed from 2.6 percent, the intermediate assumption, to 2.0 percent, the deficit increases by \$1,320 billion. The projected present values of HI cash flow are relatively insensitive to the assumed level of general price inflation because price inflation has about the same proportionate effect on income as it does on costs. In present value terms, a smaller deficit results under high-inflation conditions because the present values of HI expenditures are not significantly different under the various CPI scenarios, but under high-inflation conditions the present value of HI income increases as more people become subject to the additional 0.9-percent HI tax rate required by the ACA for workers with earnings above \$200,000 or \$250,000 (for single and joint income-tax filers, respectively). Since the thresholds are not indexed, additional workers become subject to the additional tax more quickly under conditions of faster inflation, and vice versa.

Higher net immigration results in smaller HI cash flow deficits. Since immigration tends to occur most often among people at working ages, who work and pay taxes into the HI system, a change in the net immigration assumption affects revenues from payroll taxes almost immediately. However, the impact on expenditures occurs later as those individuals age and become beneficiaries.

Table 3 also shows that the present value of net HI expenditures is approximately 15 percent lower if the real interest rate is 3.2 percent rather than 2.7 percent, and approximately 19 percent higher if the real interest rate is 2.2 percent rather than 2.7 percent.

Table 3
Present Values of Estimated Medicare Part A Expenditures in Excess of Income
Under Various Assumptions, 2017-2091

(Dollar values in billions; values of assumptions shown in parentheses)

Assumption ¹	Financing Shortfall Range		
	Low	Intermediate	High
Average annual growth in health costs ²	(3,662) (2.7)	3,532 (3.7)	15,028 (4.7)
Total fertility rate ³	2,995 (2.2)	3,532 (2.0)	4,018 (1.8)
Real wage differential	1,135 (1.8)	3,532 (1.2)	4,961 (0.6)
CPI change	2,494 (3.2)	3,532 (2.6)	4,852 (2.0)
Net immigration ⁴	3,240 (1,623,000)	3,532 (1,286,000)	3,879 (961,000)
Real interest rate	3,006 (3.2)	3,532 (2.7)	4,197 (2.2)

¹ The sensitivity of the projected HI net cash flow to variations in future mortality rates also is of interest. At this time, however, relatively little is known about the relationship between improvements in life expectancy and the associated changes in health status and per beneficiary health expenditures. As a result, it is not possible at present to prepare meaningful estimates of the Part A, mortality sensitivity.

² Annual growth rate is the aggregate cost of providing covered health care services to beneficiaries. The low-cost and high-cost alternatives assume that costs increase 1 percent slower or faster, respectively, than the intermediate assumption, relative to growth in taxable payroll.

³ The total fertility rate for any year is the average number of children who would be born to a woman in her lifetime if she were to experience the birth rates by age observed in, or assumed for, the selected year and if she were to survive the entire childbearing period.

⁴ Amount represents the average annual net immigration over the 75-year projection period.

Source: Center for Medicare & Medicaid Services

Table 4 shows the effects of various assumptions about the growth in health care costs on the present value of estimated SMI (Medicare Parts B and D) expenditures in excess of income. As with HI, net SMI expenditures are very sensitive to changes in the health care cost growth assumption. For the low-cost alternative, the slower assumed growth in health costs reduces the governmentwide resources needed for Part B from \$22,392 billion to \$16,220 billion and in Part D from \$7,618 billion to \$5,388 billion, about a 28 percent and 29 percent difference for Part B and Part D, respectively. The high-cost assumption increases governmentwide resources needed to \$32,019 billion for Part B and to \$11,170 billion for Part D, about a 43 percent and a 47 percent difference for Part B and Part D, respectively.

Table 4
Present Values of Estimated Medicare Parts B and D Future Expenditures
Less Premium Income and State Transfers Under Three Health Care Cost
Growth Assumptions, 2017-2091

(In billions of dollars)

Medicare Program ¹	Governmentwide Resources Needed		
	Low (3.3)	Intermediate (4.3)	High (5.3)
Part B	16,220	22,392	32,019
Part D	5,388	7,618	11,170

¹ Annual growth rate is the aggregate cost of providing covered health care services to beneficiaries. The low and high scenarios assume that costs increase one percent slower or faster, respectively, than the intermediate assumption.

Sustainability of Social Security and Medicare

75-Year Horizon

According to the 2017 Medicare Trustees Report, the HI Trust Fund is projected to remain solvent until 2029 and, according to the 2016 Social Security Trustees Report, the OASI and DI Trust Funds are projected to have sufficient asset reserves to pay full benefits on time until 2035 and 2028, respectively. In each case, some general revenues must be used to satisfy the authorization of full benefit payments until the year of trust fund depletion. This occurs when the trust fund interest income and balances accumulated during prior years are needed to pay benefits, which leads to a transfer from general revenues to the trust funds. Moreover, under current law, General Fund transfers to the SMI Trust Fund will occur into the indefinite future and will continue to grow with the growth in health care expenditures.

The potential magnitude of future financial obligations under these three social insurance programs is, therefore, important from a budget perspective as well as for understanding generally the growing resource demands of the programs on the economy. A common way to present future cash flows is in terms of their *present value*. This approach recognizes that a dollar paid or collected next year is worth less than a dollar today because a dollar today could be saved and earn a year's worth of interest. From the 75-year budget perspective, the present value of the additional resources that would be necessary to meet projected expenditures, for the three programs combined, is \$48.9 trillion. To put this figure in perspective, it would represent 3.9 percent of the present value of projected GDP over the same period (\$1,250 trillion). These resource needs would be in addition to the payroll taxes, benefit taxes, and premium payments. Asset redemptions and SMI general revenue transfers represent formal budget commitments, but no provision exists for covering the HI and OASDI Trust Fund deficits once assets are depleted.

Table 5 shows the magnitudes of the primary expenditures and sources of financing for the three trust funds computed on an open-group basis for the next 75 years and expressed in present values. The data are consistent with the Statements of Social Insurance included in the principal financial statements. For HI, revenues from the public are projected to fall short of total expenditures by \$3,532 billion in present value terms which is the additional amount needed in order to pay scheduled benefits over the next 75 years.¹⁴ From the trust fund perspective, the amount needed is \$3,333 billion in present value after subtracting the value of the existing trust fund balances (an asset to the trust fund account but an intragovernmental transfer to the overall budget). For SMI, revenues from the public for Part B and D combined are estimated to be \$30,010 billion less than total expenditures for the two accounts, an amount that, from a budget perspective, will be needed to keep the SMI program solvent for the next 75 years. From the trust fund perspective, however, the present values of total revenues and total expenditures for the SMI Program are roughly equal due to the annual adjustment of revenue from other Government

¹⁴ Interest income is not a factor in this table as dollar amounts are in present value terms.

accounts to meet program costs.¹⁵ For OASDI, projected revenues from the public fall short of total expenditures by \$15,357 billion in present value dollars, and by \$12,509 billion from the trust fund perspective.

From the governmentwide perspective, the present value of the total resources needed for the Social Security and Medicare Programs over and above current-law funding sources (payroll taxes, benefit taxes, and premium payments from the public) is \$48,898 billion. From the trust fund perspective, which counts the trust funds (\$3,143 billion in present value) and the general revenue transfers to the SMI Program (\$30,010 billion in present value) as dedicated funding sources, additional resources needed to fund the programs are \$15,745 billion in present value.

Table 5
Present Values of Costs Less Revenues of 75-Year Open Group Obligations
HI, SMI, and OASDI

(In billions of dollars, as of January 1, 2017)	HI	SMI		OASDI	Total
		Part B	Part D		
Revenues from the public:					
Taxes	21,738	-	-	62,131	83,869
Premiums and state transfers	-	8,391	3,138	-	11,529
Total	21,738	8,391	3,138	62,131	95,398
Total costs to the public	25,270	30,783	10,756	77,487	144,296
Net results - budget perspective ¹	3,532	22,392	7,618	15,357	48,898
Revenues from other Government accounts	-	22,392	7,618	-	30,010
Trust fund balances as of 1/1/2017	199	88	8	2,848	3,143
Net results - trust fund perspective ¹	3,333	(88)	(8)	12,509	15,745

¹Net results are computed as costs less revenues and trust fund balances. Negative values are indicative of surpluses.

Note: Totals may not equal the sum of components due to rounding.

Source: 2017 OASDI and Medicare Trustees' Reports

Infinite Horizon

The 75-year horizon represented in Table 5 is consistent with the primary focus of the Social Security and Medicare Trustees' Reports. For the OASDI Program, for example, an additional \$15.4 trillion in present value will be needed above currently scheduled taxes to pay for scheduled benefits (\$12.5 trillion from the trust fund perspective). Experts have noted that limiting the projections to 75 years understates the magnitude of the long-range unfunded obligations because summary measures (such as the actuarial balance and open-group unfunded obligations) reflect the full amount of taxes paid by the next two or three generations of workers, but not the full amount of their benefits. One approach to addressing the limitations of 75-year summary measures is to extend the projection horizon indefinitely, so that the overall results reflect the projected costs and revenues after the first 75 years. Such extended projections can also help indicate whether the financial imbalance would be improving or continuing to worsen beyond the normal 75-year period. The open-group infinite horizon net obligation is the present value of all expected future program outlays less the present value of all expected future program tax and premium revenues. Such a measure is provided in Table 6 for the three trust funds represented in Table 5.

From the budget or governmentwide perspective, the values in line 1 plus the values in line 4 of Table 6 represent the value of resources needed to finance each of the programs into the infinite future. The sums are shown in the last line of the table (also equivalent to adding the values in the second and fifth lines). The total resources needed for all the programs sums to \$93.8 trillion in present value terms. This need can be satisfied only through increased borrowing, higher taxes, reduced program spending, or some combination.

¹⁵ The SMI Trust Fund has \$96 billion of existing assets.

The second line shows the value of the trust fund at the beginning of 2017. For the HI and OASDI Programs this represents, from the trust fund perspective, the extent to which the programs are funded. From that perspective, when the trust fund is subtracted, an additional \$34.2 trillion is needed to sustain the OASDI program into the infinite future, while the HI program reflects a projected surplus of \$3.6 trillion over the infinite horizon. However, looking just at present values ignores timing differences in the underlying projected cash flows; the HI Trust Fund is projected to remain solvent only until 2029. As described above, from the trust fund perspective, the SMI Program is fully funded; from a governmentwide basis, the substantial gap that exists between premiums, state transfer revenue, and program expenditures in the SMI Program (\$41.3 trillion and \$18.7 trillion for Parts B and D, respectively) represents future general revenue obligations of the federal budget.

In comparison to the analogous 75-year number in Table 5, extending the calculations beyond 2091, captures the full lifetime benefits, plus taxes and premiums of all current and future participants. The shorter horizon understates the total financial needs by capturing relatively more of the revenues from current and future workers and not capturing all of the benefits that are scheduled to be paid to them.

Table 6
Present Values of Costs Less Tax, Premium and State Transfer Revenue
through the Infinite Horizon, HI, SMI, OASDI

(in trillions of dollars as of January 1, 2017)	HI	SMI		OASDI	Total
		Part B	Part D		
Present value of future costs less future taxes, premiums, and state transfers for current participants	10.6	18.7	5.6	33.6	68.5
Less current trust fund balance	0.2	0.1	-	2.8	3.1
Equals net obligations for past and current participants	10.4	18.6	5.6	30.8	65.4
Plus net obligations for future participants	(13.9)	22.7	13.1	3.4	25.3
Equals net obligations through the infinite future for all participants	(3.6)	41.3	18.7	34.2	90.6
Present values of future costs less the present values of future income over the infinite horizon	(3.3)	41.4	18.7	37.0	93.8

Note: Totals may not equal the sum of components due to rounding.

Railroad Retirement, Black Lung, and Unemployment Insurance

Railroad Retirement

The Railroad Retirement Board (RRB) was created in the 1930s to establish a retirement benefit program for the Nation's railroad workers. As the Social Security Program legislated in 1935 would not give railroad workers credit for service performed prior to 1937, legislation was enacted in 1934, 1935, and 1937 (collectively the Railroad Retirement Acts of the 1930s) to establish a railroad retirement system separate from the Social Security Program.

As was discussed previously in this report, railroad retirement pays full retirement annuities at age 60 to railroad workers with 30 years of service. The program pays disability annuities based on total or occupational disability. It also pays annuities to spouses, divorced spouses, widow(er)s, remarried widow(er)s, surviving divorced spouses, children, and parents of deceased railroad workers. Medicare covers qualified railroad retirement beneficiaries in the same way as it does Social Security beneficiaries.

Payroll taxes paid by railroad employers and their employees provide a primary source of income for the Railroad Retirement and Survivors' Benefit Program. Other sources of program income include: the RRB-SSA-CMS Financial Interchanges with the Social Security and Medicare Trust Funds, earnings on investments, federal income taxes on railroad retirement benefits, and appropriations.

For further detail related to Railroad Retirement Program financing and actuarial assumptions, see Note 22—Social Insurance.

Cash Flow Projections

Income and Expenditures. Railroad retirement cash flow projections are based on the intermediate set of assumptions used in the RRB's actuarial valuation of the program. The estimates are for the open-group population, which includes all persons projected to participate in the Railroad Retirement Program as railroad workers or beneficiaries during the period. Thus, the estimates include payments from, and on behalf of, those who will be employed by the railroads during the period as well as those already employed at the beginning of the period. They also include expenditures made to, and on behalf of, such workers during that period. Estimated railroad retirement expenditures are expected to exceed estimated income (excluding interest and financial interchange income), in dollars, for the entire projection period (2017-2091).

Income and Expenditures as a Percent of Taxable Payroll. Estimated expenditures as a percentage of Tier II taxable payroll range between 68 percent and 72 percent through 2057, after which the percentage decreases until reaching 52 percent in 2088 through 2091. This is largely due to the projected decline in the number of annuitants per full-time employee.

Sensitivity Analysis. The projections of the future financial status of the Railroad Retirement Program depend on many economic and demographic assumptions. For further information on the sensitivity of the long-range projections of the Railroad Retirement Program and how the projections are impacted by changes in certain key assumptions, refer to RRB's financial statements.

Sustainability of Railroad Retirement

Consistent with the Statements of Social Insurance the primary expenditures and sources of financing for the Railroad Retirement Program are computed on an open-group basis for the next 75 years and are expressed in present values as of October 1, 2016. From a governmentwide perspective, revenues are expected to fall short of expenditures by approximately \$108.9 billion, which represents the present value of resources needed to sustain the Railroad Retirement Program. From a trust fund perspective, when the trust fund balance (\$26.6 billion) and the financial interchange and transfers (\$84.0 billion) are included, the combined balance of the NRRIT, the Railroad Retirement Account, and the SSEB Account show a slight surplus (\$1.7 billion). For further detail related to the sustainability of the Railroad Retirement Program, refer to RRB's financial statements.

Black Lung

The Federal Coal Mine Health and Safety Act of 1969 created the Black Lung Disability Benefit Program to provide compensation, medical, and survivor benefits for eligible coal miners who are totally disabled due to pneumoconiosis (black lung disease) arising out of their coal mine employment and the Black Lung Disability Trust Fund (BLDTF) provides benefit payments when no responsible mine operator (RMO) can be assigned the liability.

As was stated in the note to Social Insurance earlier in this report, black lung disability benefit payments are funded by excise taxes from coal mine operators based on the domestic sale of coal, as are the program's administrative costs. These taxes are collected by the Internal Revenue Service (IRS) and transferred to the BLDTF.

P.L. 110-343, *Division B-Energy Improvement and Extension Act of 2008*, enacted on October 3, 2008, in section 113, (1) allowed for the temporary increase in coal excise tax rates to continue an additional five years beyond the statutory limit and (2) restructured the BLDTF debt by refinancing the outstanding repayable advances (which had higher interest rates) with discounted debt instruments similar in form to zero-coupon bonds (which had lower interest rates), plus a one-time appropriation. This Act also allowed that any subsequent debt issued by the BLDTF may be used to make benefit payments, other authorized expenditures, or to repay debt and interest from the initial refinancing. All debt issued by the BLDTF was effected as borrowing from the Treasury's Bureau of the Fiscal Service.

For more information on Black Lung Disability Benefit Program financing and actuarial assumptions, see Note 22—Social Insurance.

Cash Flow Projections

Projected Cash Inflows and Outflows, in Constant Dollars, for the Open Group. Effective for fiscal year 2017 reporting, DOL revised its projection period from a fixed terminus of fiscal year 2040 to a rolling 25-year period beginning on the valuation date. In order to be consistent with Executive Branch policy on regulations pursuant to the Clean Power Plan (CPP), DOL's estimates of future excise tax income were based on Energy Information Administration (EIA) projections of future coal production that do not reflect CPP regulation. The EIA projections reflect the continuing trend of lower coal production which would lead to lower future excise tax income. The projections, in constant dollars for the open group, made over the 25-year period ending September 30, 2042, indicate that cash inflows from excise taxes will exceed cash outflows for benefit payments and administrative expenses for fiscal years 2018 and 2019, but cash outflows will exceed cash inflows for fiscal years 2020 through 2032 before reversing again in fiscal year 2033.

Sensitivity Analysis. For the projected cash inflows and outflows with sensitivity analysis, in constant dollars for the open group, the significant assumption for medical cost inflation was increased by one percent. For the sensitivity analysis, the other significant assumptions (coal excise tax revenue estimates, tax rate structure, number of beneficiaries, life expectancy, federal civilian pay raises, interest rate on new debt issued by the BLDTF, and CPI-U for goods and services) were left unchanged. Cash projections depend on the assumptions used and actual experience may differ materially from the projections. These projections with sensitivity analysis, in constant dollars for the open group, made over the 25-year period ending September 30, 2042, indicate that cash inflows from excise taxes will exceed cash outflows for benefit payments and administrative expenses for fiscal years 2018 and 2019, but cash outflows exceed cash inflows for fiscal years 2020 through 2033 before reversing again in fiscal year 2034. For further information on the sensitivity of the projections of the Black Lung Disability Benefit Program and how the projections are impacted by changes in assumptions, refer to DOL's financial statements.

Sustainability of Black Lung

On September 30, 2017, total liabilities of the BLDTF exceeded assets by \$5.6 billion. This net position represents the accumulated shortfall of excise taxes necessary to meet benefit payments, administrative costs, and interest expense incurred prior to and subsequent to the debt refinancing pursuant to P.L. 110-343. Prior to the enactment of P.L. 110-343, this shortfall was funded by repayable advances to the BLDTF, which were repayable with interest. Pursuant to P.L. 110-343, any shortfall will be financed with debt instruments similar in form to zero-coupon bonds, with a maturity date of one year and bear interest at the Treasury 1-year rate. For further detailed information on the sustainability of the Black Lung Disability Benefit Program, refer to DOL's financial statements.

Unemployment Insurance

The Unemployment Insurance (UI) Program was created in 1935 to provide income assistance to unemployed workers who lose their jobs generally through no fault of their own, and are unemployed due to a lack of suitable work. The program protects workers during temporary periods of unemployment through the provision of unemployment compensation benefits. The program is administered through a unique system of federal and state partnerships established in federal law but executed through conforming state laws by state agencies. The federal government provides broad policy guidance and program

direction through the oversight of DOL, while program details are established through individual state UI statutes, administered through state UI agencies.

The UI Program is financed through the collection of federal and state unemployment taxes levied on subject employers and deposited in the Unemployment Trust Fund (UTF) and federal appropriations. The fund was established to account for the receipt, investment, and disbursement of unemployment taxes. Federal unemployment taxes are used to pay for the administrative costs of the UI Program, including grants to each state to cover the costs of state UI operations and the federal share of extended UI benefits. Federal unemployment taxes are also used to fund an account within the UTF to make advances to state UI accounts when a state's UI account balance has been exhausted and the state is unable to make benefit payments.

The UI Program provides regular and extended benefit payments to eligible unemployed workers. Regular UI program benefits are established under state law and are payable for a period not to exceed a maximum duration. In 1970 federal law began to require states to extend this maximum period of benefit duration by 50 percent during periods of high unemployment. These extended benefit payments are paid equally from federal and state accounts.

Cash Flow Projections

The significant assumptions used in the cash flow projections of the UTF include total unemployment rates, civilian labor force levels, percent of unemployed receiving benefits, total wages, distribution of benefit payments by state, state tax rate structures, state taxable wage bases, interest rates on UTF investments, and the CPI-U for good and services. Cash projections depend on the assumptions used and actual experience may differ materially from the projections. Under expected economic conditions, total cash inflows, excluding interest earnings, are projected to exceed total cash outflows through the end of the projection period.

Sensitivity Analysis. The effect on the accumulated UTF assets of projected total cash inflows and cash outflows of the UTF, in constant dollars, over the ten-year period ending September 30, 2027, are demonstrated in two sensitivity analyses. Each sensitivity analysis uses an open group, which includes current and future participants in the UI Program. Sensitivity Analysis I assumes higher rates of unemployment and Sensitivity Analysis II assumes even higher rates of unemployment compared to expected economic conditions. In Sensitivity Analysis I, which uses a higher unemployment rate of 5.72 percent beginning in fiscal year 2018, net cash inflows are negative in fiscal years 2018 through 2021, become positive in fiscal year 2022, and remain positive through 2027. In Sensitivity Analysis II, net cash outflows, including interest earnings and expenses, are projected in fiscal years 2019 through 2023, but outflows exceed inflows in fiscal years 2024 through 2027. Net cash inflows are reestablished in fiscal year 2024 and peak in fiscal year 2026, with a drop in the unemployment rate to 8.28 percent in fiscal year 2022, and then steadily downward for fiscal years 2023 through 2027. The example of expected economic conditions and two sensitivity analyses, in constant dollars, demonstrate the counter cyclical nature of the UI Program, which experiences net cash inflows during periods of low unemployment that are depleted by net cash outflows during periods of increased unemployment. For further detail on the sensitivity of the projections of the UI Program, refer to DOL's financial statements.

Sustainability of Unemployment Insurance

The ability of the UI Program to meet a participant's future benefit payment needs depends on the availability of accumulated taxes and earnings within the UTF. The effect of projected benefit payments on the accumulated net assets of the UTF is measured, under an open group scenario, which includes current and future participants in the UI Program. As of September 30, 2017, total assets within the UTF exceeded total liabilities by \$58.6 billion. At the present time there is a surplus; any surplus of tax revenues and earnings on these revenues over benefit payment expenses is available to finance benefit payments in future periods when tax revenues may be insufficient. For more information on the sustainability of the UI Program, refer to DOL's financial statements.

Unemployment Trust Fund Solvency

Each state's accumulated UTF net assets or reserve balance should provide a defined level of benefit payments over a defined period. To be minimally solvent, a state's reserve balance should provide for one year's projected benefit payment needs based on the highest levels of benefit payments experienced by the state over the last 20 years. A ratio of 1.0 or greater indicates that the state UTF account balance is minimally solvent. States below this level are vulnerable to exhausting their funds in a recession. States exhausting their reserve balance must borrow funds from the Federal Unemployment Account (FUA) to make benefit payments. In fiscal year 2017, there were no FUA borrowings.

The results of DOL's state by state analysis indicate 28 state funds plus the fund of the Virgin Islands were below the minimal solvency ratio of 1.0 at September 30, 2017.

Deferred Maintenance and Repairs

Deferred maintenance and repairs result from maintenance not being performed on a timely basis and is the estimated cost to bring Government-owned property, plant, and equipment to an acceptable condition. Deferred maintenance and repairs exclude the cost of expanding the capacity of assets or upgrading them to serve needs different from those originally intended. The consequences of not performing regular maintenance and repairs could include increased safety hazards, poor service to the public, higher costs in the future, and inefficient operations. Estimated deferred maintenance and repairs costs are not accrued in the Statements of Net Cost or recognized as a liability on the Balance Sheets.

The amounts disclosed for deferred maintenance and repairs are allowed to be measured using one of the following three methods:

- Condition assessment surveys which are periodic inspections of Government-owned property to determine the current condition and estimated cost to bring the property to an acceptable condition.
- Life-cycle cost forecast that is an acquisition or procurement technique that considers operation, maintenance, and other costs in addition to the acquisition cost of assets.
- Any other method of choice that is similar to the condition assessment survey or life-cycle costing methods.

The table below of deferred maintenance and repairs is presented as a single estimate in accordance with SFFAS No. 42, *Deferred Maintenance and Repairs: Amending Statements of Federal Financial Accounting Standards 6, 14, 29, and 32*. These amounts were all measured using the condition assessment survey method. Please refer to the individual financial statements of DOI, DOD, USDA, DOE, HHS, NASA, and VA for detailed significant information on deferred maintenance and repairs.

Deferred Maintenance and Repairs as of September 30, 2017, and 2016		
(In billions of dollars)	2017	2016
Asset category:		
General property, plant, and equipment	151.6	165.3
Heritage assets	18.1	19.5
Stewardship land.....	0.5	0.4
Total deferred maintenance and repairs	<u>170.2</u>	<u>185.2</u>

Other Claims for Refunds

Management has estimated amounts that may be paid out as other claims for tax refunds. This estimate represents an amount (principal and interest) that may be paid for claims pending judicial review by the federal courts or, internally, by appeals. The total estimated payout (including principal and interest) for claims pending judicial review by the federal courts is \$8.2 billion and \$4.8 billion for fiscal years 2017 and 2016, respectively. For those under appeal, the estimated payout is \$2.2 billion and \$2.3 billion for fiscal years 2017 and 2016, respectively. Although these refund claims have been deemed to be probable, they do not meet the criteria in SFFAS No. 5, *Accounting for Liabilities of the Federal Government*, for reporting the amounts in the balance sheets or for disclosure in the notes to the financial statements. However, they meet the criteria in SFFAS No. 7, *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, as amended, for inclusion as required supplementary information. To the extent judgments against the Government for these claims prompt other similarly situated taxpayers to file similar refund claims, these amounts could become significantly greater.

Tax Assessments

The Government is authorized and required to make inquiries, determinations, and assessments of all taxes that have not been duly paid. Unpaid assessments result from taxpayers filing returns without sufficient payment, as well as enforcement programs such as examination, under-reporter, substitute for return, and combined annual wage reporting. Under federal accounting standard, unpaid assessments are categorized as taxes receivable if taxpayers agree or a court has determined the assessments are owed. If neither of these conditions are met, the unpaid assessments are categorized as compliance assessments. Assessments with little or no future collection potential are called write-offs. Although compliance assessments and write-offs are not considered receivables under federal accounting standards, they represent legally enforceable claims of the Government. There is, however, a significant difference in the collection potential between compliance assessments and receivables.

Compliance assessments and pre-assessment work in process are \$75.8 billion and \$77.3 billion for fiscal years 2017 and 2016, respectively. The amount of allowance for uncollectible amounts pertaining to compliance assessments cannot be reasonably estimated, and thus the net realizable value of the value of the pre-assessment work-in-process cannot be determined. The amount of assessments that agencies have statutory authority to collect at the end of the period but that have been written off and excluded from accounts receivable are \$111.0 billion and \$139.0 billion for fiscal years 2017 and 2016, respectively.

Federal Oil and Gas Resources

The DOI is responsible for managing the nation's oil and natural gas resources and the mineral revenues on federal lands, both onshore and on the Outer Continental Shelf. This management process can be broken down into six essential analysis components: pre-leasing, post-leasing and pre-production, production and post-production, revenue collection, fund disbursement, and compliance.

Federal Oil and Gas Resources as of September 30, 2017, and 2016

(In billions of dollars)	Offshore		Onshore		Total	
	2017	2016	2017	2016	2017	2016
Oil and lease condensate.....	23.7	23.7	12.2	12.8	35.9	36.5
Natural gas, wet after lease separation.....	1.8	2.6	9.3	12.3	11.1	14.9
Total	<u>25.5</u>	<u>26.3</u>	<u>21.5</u>	<u>25.1</u>	<u>47.0</u>	<u>51.4</u>

The above table presents the estimated present value of future federal royalty receipts on estimated proved reserves¹⁶ as of September 30, 2017 and 2016. The federal government's estimated petroleum royalties have as their basis the DOE's Energy Information Administration (EIA) estimates of proved reserves. The EIA provides such estimates for federal offshore areas and they are adjusted to extract the federal subset of onshore proved reserves. The federal proved reserves were then further adjusted to correspond with the effective date of the actual production for calendar year 2015, the most recently published EIA proved reserves report and then are projected, separately for oil and natural gas, over time to simulate a schedule of when the reserves would be produced. Future royalties are then calculated from these production streams by applying future price estimates by the OMB, and effective royalty rates, adjusted for transportation allowances and other allowable deductions. The valuation method used for gas captures royalties from three products—dry gas, wet gas, and natural gas liquids—which collectively are reported as natural gas, wet after lease separation. The present value of these royalties are then determined by discounting the revenue stream back to the effective date at a public discount rate assumed to be equal to the OMB's estimates of future 30-year Treasury bill rates. The 30-year rate was chosen because this maturity life most closely approximates the productive lives of the proved reserves estimates.

¹⁶ Per the EIA, lease condensate is a mixture consisting primarily of pentanes and heavier hydrocarbons which is recovered as a liquid from natural gas in lease separation facilities. This category excludes natural gas plant liquids, such as butane and propane, which are recovered at downstream natural gas processing plants or facilities. Also per the EIA, natural gas, wet after lease separation, is the volume of natural gas remaining after removal of lease condensate in lease and/or field separation facilities, if any, and after exclusion of nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Natural gas liquids may be recovered from volume of natural gas, wet after lease separation, and at natural gas processing plants (<https://www.eia.gov/naturalgas/data.cfm>).

**Estimated Federal Oil and Gas Petroleum Royalties (Proved Reserves)
As of September 30, 2017, and 2016**

Petroleum Category	Quantity (in millions)		Average Purchase Price (\$)		Average Royalty Rate (%)	
	2017	2016	2017	2016	2017	2016
Oil and lease condensate (Bbl):						
Offshore	4,022.4	4,362.2	46.86	37.77	13.06	13.08
Onshore	2,278.0	2,655.0	45.20	35.79	12.12	12.14
Total	<u>6,300.4</u>	<u>7,017.2</u>				
Natural gas, wet after lease separation (Mcf):						
Offshore	5,946.4	7,327.7	3.28	2.43	11.99	11.77
Onshore	39,877.7	44,836.7	3.07	2.31	10.58	9.68
Total	<u>45,824.1</u>	<u>52,164.4</u>				

Bbl = barrels

Mcf = 1,000 cubic feet

The table above provides the estimated quantity, a weighted average purchase price, and a weighted average royalty rate by category of estimated federal petroleum royalties at the end of fiscal year 2017 and 2016.¹⁷ The estimated quantities, average purchase prices and royalty rates vary by region; the above table reflects an overall weighted average purchase price and royalty rate, and is not presented on a regional basis, but is instead calculated based on regional averages. The prices and royalty rates are based upon historical (or estimated) averages, excluding prior-period adjustments, if any, and are affected by such factors as accounting adjustments and transportation allowances, resulting in effective average prices and royalty rates. Prices are valued at the lease rather than at the market center, and differ from those used to compute the asset estimated present values, which are forecasted and discounted based upon OMB economic assumptions. For further details on federal oil and gas resources, refer to the financial statements of DOI. In addition to the oil and gas resources discussed above, the federal government also owns oil and gas resources that are not currently under lease.

¹⁷ Gulf of Mexico proved reserves are royalty bearing volumes. In the Gulf of Mexico, an additional 689.7 million Bbl for fiscal year 2017 and 884.3 million Bbl for fiscal year 2016 of proved oil reserves, and 1,180.3 million Mcf for fiscal year 2017 and 1,104.2 million Mcf for fiscal year 2016 of proved gas reserves are not reflected in these totals as they are estimated to be producible royalty free under various royalty relief provisions. The net present value of the royalty value of the royalty free proved reserves volumes in the Gulf of Mexico is estimated to be \$4.4 billion for fiscal year 2017 and \$5.0 billion for fiscal year 2016.

Federal Natural Resources Other than Oil and Gas

Federal Natural Resources Other than Oil and Gas as of September 30, 2017, and 2016

(in billions of dollars)

Natural Resource Category	2017	2016
Coal royalties	9.0	8.8
Total	9.0	8.8

The Office of Natural Resources Revenue (ONRR) within DOI is responsible for the management and collection of revenues associated with federal coal leases which are managed by the Bureau of Land Management (BLM) within DOI. The ONRR achieves optimal value by ensuring that all natural resource revenues are efficiently and accurately collected as well as disbursed to recipients in a timely manner by performing audit and revenue compliance activities.

The Mineral Leasing Act of 1920, as amended, and the *Mineral Leasing Act for Acquired Lands of 1947*, as amended, gives DOI the responsibility for coal leasing on approximately 700 million acres of federal mineral estate which includes 570 million of acres where coal development is allowed. The surface estate of these lands may be under the control of BLM, the U.S. Forest Service (within USDA), private or state land owners, or other federal agencies.

Public lands are available for coal leasing after the lands have been evaluated through a multiple-use planning process. *The Mineral Leasing Act*, as amended by the *Federal Coal Leasing Amendments Act of 1976*, generally requires that coal be leased competitively and that the federal government must receive a fair market value for land leased for coal development. Once a lease is issued, federal coal leasing laws and lease terms determine the federal government's share of production from coal leasing operations.

DOI receives coal leasing revenues from a bonus paid at the time of the lease, an annual rent payment of \$3.00 per acre, and royalties paid on the value of the coal after it has been mined. A portion of the total federal coal royalties will be distributed to other non-federal entities. The royalty rate for surface-mining methods is 12.5 percent and is 8 percent for underground mining, and the BLM can approve reduced royalty rates based on maximum economic recovery. Regulations that govern BLM's coal leasing program are contained in Title 43, Groups 3000 and 3400 of the Code of Federal Regulations.

The above table presents the estimated present value of federal coal royalties under lease contract or other long-term arrangements as of September 30, 2017 and 2016. The federal government's estimated coal royalties have as their basis the DOI's BLM estimates of recoverable reserves. The federal recoverable reserves are then further adjusted to correspond with the effective date of the analysis and then are projected over time to simulate a schedule of when the reserves would be produced. Futures royalties are then calculated by applying future price estimates and effective royalty rates, adjusted for transportation allowances and other allowable deductions. The present value of these royalties are then determined by discounting the revenue stream back to the effective date at a public discount rate assumed to be equal to the OMB's estimates of future 30-year Treasury bill rates. The 30-year rate was chosen because this maturity life most closely approximates the productive lives of the recoverable reserves estimates.

In addition to the coal resources discussed above, the federal government has other natural resources under lease contract whereby the lessee is required to pay royalties on the sale of the natural resource. These natural resources include soda ash, potash muriates of potash and langbeinite phosphate, lead concentrate, copper concentrate, and zinc concentrate. Soda ash and potash have the largest estimated present value of future royalties. The federal government also owns coal resources and certain other natural resources that are not currently under lease. For further details on federal natural resources-other than oil and gas, refer to the financial statements of DOI.

United States Government Other Information (Unaudited) for the Years Ended September 30, 2017, and 2016

Tax Burden

The Internal Revenue Code provides for progressive tax rates, whereby higher earned income is generally subject to higher tax rates. The following tables present the latest available information on income tax and related income, deductions, and credit: for individuals by income level, and for corporations by size of assets.

Individual Income Tax Liability for Tax Year 2015						
Adjusted Gross Income (AGI)	Number of Taxable Returns (In thousands)	AGI (in millions of dollars)	Total Income Tax (in millions of dollars)	Average AGI Per Return (in whole dollars)	Average Income Tax per Return (in whole dollars)	Income Tax as a Percentage of AGI
Under \$15,000	35,824	61,630	2,033	1,720	57	3.3%
\$15,000 under \$30,000	30,043	662,661	18,468	22,057	615	2.8%
\$30,000 under \$50,000	26,539	1,040,372	57,698	39,202	2,174	5.5%
\$50,000 under \$100,000	32,802	2,339,474	205,693	71,321	6,271	8.8%
\$100,000 under \$200,000 ...	18,533	2,506,498	316,350	135,245	17,070	12.6%
\$200,000 under \$500,000 ...	5,428	1,546,515	299,832	284,914	55,238	19.4%
\$500,000 or more	1,324	2,053,160	557,817	1,550,725	421,312	27.2%
Total	150,493	10,210,310	1,457,891			

Corporation Income Tax Liability for Tax Year 2014

Total Assets (In thousands of dollars)	Income Subject to Tax (in millions of dollars)	Total Income Tax After Credits (in millions of dollars)	Percentage of Income Tax After Credits to Taxable Income
Zero Assets	16,236	5,347	32.9%
\$1 under \$500.....	8,728	1,786	20.5%
\$500 under \$1,000	3,787	918	24.2%
\$1,000 under \$5,000	13,567	4,080	30.1%

\$100,000 under \$250,000	32,119	8,303	25.9%
\$250,000 under \$500,000	29,921	9,453	31.6%
\$500,000 under \$2,500,000	120,328	35,316	29.3%
\$2,500,000 or more	1,126,109	254,458	22.6%
Total	<u>1,401,175</u>	<u>336,078</u>	

Tax Gap

The tax gap is the difference between what taxpayers should pay and what they actually pay on time. The tax gap, about \$458.0 billion annually based on updated estimates, represents the amount of noncompliance with the tax laws. It is estimated that \$52.0 billion of the gross tax gap will eventually be collected resulting in a net tax gap of \$406.0 billion. The IRS remains committed to finding ways to increase compliance and reduce the tax gap, while minimizing the burden on the vast majority of taxpayers who pay their taxes accurately and on time.

The tax gap is the aggregate amount of tax (excluding interest and penalties) that is imposed by the tax laws for any given tax year but is not paid voluntarily and timely. The tax gap arises from three types of noncompliance: not filing required tax returns on time or at all (the nonfiling gap), underreporting the correct amount of tax on timely filed returns (the underreporting gap), and not paying on time the full amount reported on timely filed returns (the underpayment gap). Underreporting of income tax, employment taxes, and other taxes represents 84.5 percent of the gross tax gap. Each instance of noncompliance by a taxpayer contributes to the tax gap, whether or not the IRS detects it, and whether or not the taxpayer is even aware of the noncompliance. Some of the tax gap arises from intentional (willful) noncompliance, and some of it arises from unintentional mistakes.

The collection gap is the cumulative amount of assessed tax, penalties, and interest that has been assessed over many years, but has not been paid by a certain point in time and which the IRS expects to remain uncollectible. In essence, it represents the difference between the total balance of unpaid assessments and the net taxes receivable reported on the IRS' balance sheet. The tax gap and the collection gap are related and overlapping concepts, but they have significant differences. The collection gap is a cumulative balance sheet concept for a particular point in time, while the tax gap is like an income statement item for a single year. Moreover, the tax gap estimates include all noncompliance, while the collection gap includes only amounts that have been assessed (a small portion of all non-compliance).

Unmatched Transactions and Balances

(in millions of dollars)	Fiscal Year 2017	Restated Fiscal Year 2016
Change in intragovernmental unmatched balances:		
Debt/investment	(4,145.3)	4,130.3
Interest payable/receivable	-	18.6
Interest payable/receivable-loans and not otherwise classified ..	-	6.5
Accounts payable/receivable capital transfers	-	(13.4)
Loans payable/receivable	-	(1.1)
Benefit program contributions payable/receivable.....	10.6	12.4
Accounts payable/receivable	(574.9)	167.6
Advances from/to others & deferred credits/prepayments	61.2	(301.7)
Transfers payable/receivable	(50.2)	14.5
Other assets/liabilities.....	-	1,976.1
Fund balance with Treasury	399.0	1,074.7
Asset for custodial and non-entity asset/liability	-	13,727.7
	<u>(4,299.6)</u>	<u>20,812.2</u>
Unmatched intragovernmental transactions:		
Federal securities interest revenue/expense-investment exchange.....	-	(629.2)
Borrowings interest revenue/expense-exchange	-	2.9
Borrowings gains/losses	-	(9.0)
Non-expenditure transfers-in/out	(438.4)	2,218.2
Expenditure transfers-in/out	688.2	426.9
Transfers-in/out without reimbursement.....	(89.5)	208.3
Imputed financing source/cost.....	-	(0.1)
Benefit program revenue/cost	(896.3)	(906.1)
Non-reciprocating*	8,914.8	(19,150.8)
Revenue and other financing sources*	297.4	-
Appropriations expended	342.4	(361.3)
Appropriations used	(342.4)	300.3
Appropriations received/warrants issued.....	(390.1)	3,296.0
Appropriations of unavailable special or trust fund receipts transferred out/in.....	-	(3.0)
Custodial and non-entity collections transferred out/in	(6,865.6)	(11,445.5)
Other taxes and receipts/trust fund warrants	-	(2,787.6)
Accrual amounts collected/transferred in.....	-	5.0
Other.....	501.4	(113.7)
	<u>1,721.9</u>	<u>(28,948.7)</u>
Unmatched transactions and balances, net	<u>(2,577.7)</u>	<u>(8,136.5)</u>
() Parentheses indicate a decrease to Net Position.		
* The fiscal year 2016 amounts for revenue and other financing sources are included under "Non-reciprocating."		

The Statement of Operations and Changes in Net Position includes an amount for unmatched transactions and balances that result from the consolidation of federal reporting entities. Transactions between federal entities must be eliminated in consolidation to calculate the financial position of the government. Many of the amounts included in the table represent intragovernmental activity and balances that differed between federal agency trading partners and often totaled significantly more in the absolute than the net amounts shown. The table also reflects other consolidating adjustments and other adjustments that contributed to the unmatched transactions and balances amount. In fiscal year 2017, a number of lines in the unmatched transactions and balances table were adjusted to zero after intragovernmental difference analysis determined they were immaterial at or below \$0.1 billion. The adjustments were added to, subtracted from, gross cost in the Statement of Net Cost.

Unmatched transactions and balances between federal entities impact not only in the period in which differences originate but also in the periods where differences are resolved. As a result, it would not be proper to conclude that increases or decreases in the unmatched amounts shown in the “Unmatched Transactions and Balances” table reflect improvements or deteriorations in the Government’s ability to resolve intragovernmental transactions. The federal community considers the identification and accurate reporting of intragovernmental activity a priority.

United States Government Required Supplementary Stewardship Information (Unaudited) for the Years Ended September 30, 2017, and 2016

Stewardship Investments

Stewardship investments focus on government programs aimed at providing long-term benefits by improving the Nation's productivity and enhancing economic growth. These investments can be provided through direct federal spending or grants to state and local governments for certain education and training programs, research and development, and federally financed but not federally owned property, such as bridges and roads. When incurred, these investments are included as expenses in determining the net cost of operations. Stewardship investments for the current year and for the immediately preceding four years are shown in the table below.

Stewardship Investments for the Years Ended September 30, 2013, through 2017					
	Fiscal Year 2017	Fiscal Year 2016	Fiscal Year 2015	Fiscal Year 2014	Fiscal Year 2013
(In billions of dollars)					
Investments in non-federal physical property...	65.0	65.1	64.8	65.6	66.1
Investments in human capital	111.6	131.1	97.8	108.5	58.7
Research and development:					
Investments in basic research.....	36.5	35.5	29.4	34.0	35.2
Investments in applied research.....	32.7	32.5	28.8	28.1	28.0
Investments in development	68.2	64.9	63.3	61.8	64.1
Total investments	<u>314.0</u>	<u>329.1</u>	<u>284.1</u>	<u>298.0</u>	<u>252.1</u>

Non-Federal Physical Property

The Government makes grants and provides funds for the purchase, construction, and/or major renovation of state and local government physical properties. Costs for non-federal physical property programs are included as expenses in the Statements of Net Cost and are reported as investments in the table. They are measured on the same accrual basis of accounting used in the *Financial Report* statements. DOT, HUD, and EPA had \$56.8 billion (87.4 percent), \$3.4 billion (5.2 percent), and \$2.8 billion (4.3 percent), respectively, of the total non-federal physical property investments in fiscal year 2017. Within DOT, the Federal Highway Administration invested \$42.0 billion during fiscal year 2017, primarily via reimbursement from the Highway Trust Fund, for States' construction costs on projects related to the federal highway system. The main programs in which the States participate are the National Highway System, Interstate Systems, Surface Transportation, and Congestion Mitigation/Air Quality Improvement programs. The States' contribution is 10 percent for the Interstate System and 20 percent for most other programs.

Human Capital

The Government runs several programs that invest in human capital. Those investments go toward increasing and maintaining a healthy economy by educating and training the general public. Costs do not include training expenses for federal workers.

Education, VA, and DOL had \$83.4 billion (74.7 percent), \$15.0 billion (13.4 percent), and \$6.2 billion (5.6 percent), respectively, of the total human capital investments in fiscal year 2017. Increases and decreases in Education's annual human capital investments are primarily attributable to fluctuations in the loan program subsidy estimate and loan modification costs.

Education administers a wide variety of programs related to general public education and training programs that are intended to increase or maintain national economic productive capacity. The Office of Federal Student Aid administers need-based financial assistance programs for students pursuing postsecondary education and makes available federal grants, direct loans, and work-study funding to eligible undergraduate and graduate students.

The significant human capital programs administered by DOL relate to grants for job training and employment programs. The significant human capital programs administered by VA include veterans rehabilitation and employment programs which are provided to service disabled veterans; they are designated to improve employability and promote independence for the disabled. They also include education and training programs intended to provide higher education to dependents that might not be able to participate otherwise.

Research and Development

Federal investments in research and development (R&D) comprise those expenses for basic research, applied research, and development that are intended to increase or maintain national economic productive capacity or yield other future benefits.

- Investments in basic research are for systematic studies to gain knowledge or understanding of the fundamental aspects of phenomena and of observable facts without specific applications toward processes or products in mind.
- Investments in applied research are for systematic studies to gain knowledge or understanding necessary for determining the means by which a recognized and specific need may be met.
- Investments in development are the systematic use of the knowledge and understanding gained from research for the production of useful materials, devices, systems, or methods, including the design and development of prototypes and processes.

With regard to basic and applied research, HHS had \$17.9 billion (49.0 percent) and \$12.5 billion (38.3 percent), of the total basic and applied research investments, respectively, in fiscal year 2017. HHS also had similar R&D investment amounts (and percentage contributions) in each of the preceding four years.

Within HHS, the National Institutes of Health (NIH) conducts almost all (97 percent) of the Department's basic and applied research. The NIH research program includes all aspects of the medical research continuum, including basic and disease-oriented research, observational and population-based research, behavioral research, and clinical research, including research to understand both health and disease states, to move laboratory findings into medical applications, to assess new treatments or compare different treatment approaches; and health services research. The NIH regards the expeditious transfer

of the results of its medical research for further development and commercialization of products of immediate benefit to improved health as an important mandate.

With regard to development, the DOD and NASA had \$58.0 billion (85.0 percent) and \$6.6 billion (9.7 percent), respectively, of total development investments in fiscal year 2017. Major outputs of DOD development are scientific studies, investigations, research papers, hardware components, software codes, or limited construction of a weapon system component, to include non-system-specific development efforts. Development takes what has been discovered or learned from basic research and uses it to establish technological feasibility, assessment of operability, and production capability. Development is comprised of five stages: 1) advanced technology development, 2) advanced component development and prototypes, 3) system development and demonstration, 4) research, development, test and evaluation management support, and 5) operational systems development.

NASA development includes activities to extend the knowledge of Earth, its space environment, and the universe, and to invest in new aeronautics and advanced space transportation technologies that support the development and application of technologies critical to the economic, scientific, and technical competitiveness of the United States.

This page is intentionally blank.

Appendix A: Reporting Entity

This appendix lists the organizations and agencies (entities) included in the U.S. Government's consolidated reporting entity for the *Financial Report*, as well as some entities not included in the reporting entity. Federal Accounting Standards Advisory Board's (FASAB) Statement of Federal Financial Accounting Concept (SFFAC) 2, *Entity and Display*, provides criteria for determining which entities are included in the reporting entity.

Under the first, conclusive criterion, any entity appearing in the "Federal Programs by Agency and Account" section of the federal budget is included in the consolidated reporting entity. Also, based on a consideration of the indicative criteria in the aggregate, certain entities not meeting the conclusive criteria are also included in the consolidated reporting entity, as the general purpose financial statements might be misleading or incomplete if the organization were not included therein. Indicative criteria are that an entity (1) exercises government sovereign power to carry out federal functions, (2) is owned by the federal government, particularly if the ownership is of the organization and not just the property, (3) is subject to the direct or continuing administrative control of the reporting entity, (4) carries out federal missions and objectives, (5) determines the outcome or disposition of matters affecting recipients of services that the federal government provides, and (6) has a fiduciary relationship with a reporting entity.

1. Entities included in the Reporting Entity for the Financial Report:

There are a total of 156 entities that met either the conclusive or indicative criteria, and as such are included in the *Financial Report*. The lists below describe three groups of entity types that comprise the reporting entity for the *Financial Report* and include entities from all three branches of government.

*These entities are no longer active and have either returned all remaining fund balances to Treasury during fiscal year 2017 or have remaining fund balances pending final return to Treasury as of September 30, 2017.

Legislative and Judicial Branches

There are no legal or other requirements for the legislative or judicial branches to prepare consolidated audited financial statements or to provide accrual-based accounting data for inclusion in the governmentwide financial statements. However, a portion of legislative and judicial branch entities voluntarily prepare accrual-based financial statements (e.g., Government Accountability Office, Government Publishing Office, and Library of Congress) and are included in the 156 entities listed above. The other entities of the legislative and judicial branch voluntarily provide accrual-based accounting data for inclusion in the governmentwide financial statements, except for the U.S. Senate which is included on a cash basis.

2. Entities not Included in the Reporting Entity of the Financial Report

The entities discussed below either do not meet the conclusive criteria or indicative criteria or were specifically excluded from the consolidated reporting entity in accordance with SFFAC 2. Information about the federal government's relationship with and investments in or liabilities to certain of these entities are disclosed in the notes to the financial statements.

Entities that Did not Meet the Conclusive or Indicative Criteria

The following entities are examples of entities with which the federal government has business relationships but did not meet the above mentioned conclusive or indicative criteria:

- Federal Home Loan Banks
- National Railroad Passenger Corporation (does business as Amtrak)
- Resolution Funding Corporation
- Student Loan Marketing Association
- The Financing Corporation

Entities Specifically Excluded From the Consolidated Reporting Entity

SFFAC 2 specifically excludes the Federal Reserve System—the Board of Governors of the Federal Reserve System and the Federal Reserve Banks. The Federal Reserve System could be considered as functioning consistent with the indicative criteria presented above since it establishes and monitors monetary policy. However, in the United States, the organization and functions pertaining to monetary policy are traditionally separated from and independent of the other central government organizations and functions in order to achieve more effective monetary and fiscal policies and economic results. Therefore, the Federal Reserve System is not considered part of the governmentwide reporting entity.

SFFAC 2 also excludes bailout entities. The Federal government may guarantee or pay debt for a privately owned entity whose failure could have an adverse impact on the nation's economy, commerce, national security, etc. As a condition of the bailout, the Federal government may obtain rights similar to the authorities associated with the indicative criteria presented above. However, the existence of these rights does not make the bailed out entity part of the governmentwide reporting entity.

Examples of bailout entities are:

- Federal Home Loan Mortgage Corporation (Freddie Mac)
- Federal National Mortgage Association (Fannie Mae)

Appendix B: Acronyms

This appendix lists the acronyms used in the MD&A, Financial Statements, Notes to the Financial Statements, RSI, RSSI, and Other Information sections of this *Financial Report*.

ACA	Affordable Care Act
ACH	Automated Clearing House
AIG	American International Group, Inc.
APM	Alternative Payment Models
ARRA	American Recovery and Reinvestment Act of 2009
ASC	Accounting Standards Codification
ATRA	American Taxpayer Relief Act of 2012
Bbl	Barrel
BCA	Budget Control Act
BLDTF	Black Lung Disability Trust Fund
BLM	Bureau of Land Management
Board	Federal Reserve Board of Governors
BRS	Blended Retirement System
CCIO	Center for Consumer Information and Insurance Oversight
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CFO	Chief Financial Officers
CFO Act	Chief Financial Officers Act of 1990
CFOC	Chief Financial Officers Council
CHIP	Children's Health Insurance Program
CMS	Centers for Medicare and Medicaid Services
COFAR	Council on Financial Assistance Reform
COLA	Cost of Living Adjustments
CPI	Consumer Price Index
CPI-U	Consumer Price Index for All Urban Consumers
CPIM	Consumer Price Index—Medical
CPI-W	Consumer Price Index for Urban Wage Earners and Clerical Workers

Independent Auditor's Report

The President
The President of the Senate
The Speaker of the House of Representatives

In our audits of the U.S. government's consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016, we found the following:

- Certain material weaknesses¹ in internal control over financial reporting and other limitations on the scope of our work resulted in conditions that continued to prevent us from expressing an opinion on the accompanying accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016.²
- Significant uncertainties (discussed in Note 22 to the consolidated financial statements), primarily related to the achievement of projected reductions in Medicare cost growth, prevented us from expressing an opinion on the sustainability financial statements,³ which consist of the 2017 and 2016 Statements of Long-Term Fiscal Projections;⁴ the 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance;⁵ and the 2017 and 2016 Statements of Changes in Social Insurance Amounts. A material weakness in internal control also prevented us from expressing an opinion on the 2017 and 2016 Statements of Long-Term Fiscal Projections.

¹A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected, on a timely basis. A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis.

²The accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016, consist of the (1) Statements of Net Cost, (2) Statements of Operations and Changes in Net Position, (3) Reconciliations of Net Operating Cost and Budget Deficit, (4) Statements of Changes in Cash Balance from Budget and Other Activities, and (5) Balance Sheets, including the related notes to these financial statements. Most revenues are recorded on a modified cash basis. We previously reported that certain material weaknesses and, for some years, other limitations on the scope of our work prevented us from expressing an opinion on the accrual-based consolidated financial statements of the U.S. government for fiscal years 1997 through 2016.

³The sustainability financial statements are based on projections of future receipts and spending, while the accrual-based consolidated financial statements are based on historical information, including the federal government's assets, liabilities, revenue and net cost.

⁴The Statements of Long-Term Fiscal Projections⁴ for fiscal years 2017 and 2016 present, for all the activities of the federal government, the present value of projected receipts and noninterest spending under current policy without change, the relationship of these amounts to projected gross domestic product (GDP), and changes in the present value of projected receipts and noninterest spending from the prior year. The valuation date for the Statements of Long-Term Fiscal Projections is September 30.

⁵Statements of Social Insurance are presented for the current year and each of the 4 preceding years as required by U.S. generally accepted accounting principles. For the Statements of Social Insurance, the valuation date is January 1 for the Social Security and Medicare programs, October 1 for the Railroad Retirement program (January 1 for fiscal years 2013, 2014, and 2015), and September 30 for the Black Lung program.

- Material weaknesses resulted in ineffective internal control over financial reporting for fiscal year 2017.
- Material weaknesses and other scope limitations discussed in this audit report limited tests of compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements for fiscal year 2017.

The following sections of this audit report discuss in more detail (1) our report on the accompanying consolidated financial statements, which includes (a) two emphasis of matters—equity investments, related to the federal government's actions to stabilize financial markets and to promote economic recovery, and long-term fiscal challenges, (b) Required Supplementary Information (RSI),⁶ Required Supplementary Stewardship Information (RSSI),⁷ and Other Information⁸ included with the consolidated financial statements in the *Fiscal Year 2017 Financial Report of the United States Government (2017 Financial Report)*, and (c) information on Chief Financial Officers Act of 1990 (CFO Act) agency financial management systems; (2) our Report on Internal Control over Financial Reporting; (3) our Report on Compliance with Laws, Regulations, Contracts, and Grant Agreements; and (4) the Department of the Treasury's (Treasury) and the Office of Management and Budget's (OMB) comments on a draft of this audit report. Appendix I discusses our audit objectives, scope, and methodology.

Report on the Consolidated Financial Statements

The Secretary of the Treasury, in coordination with the Director of OMB, is required to annually submit audited financial statements for the U.S. government to the President and Congress. GAO is required to audit these statements.⁹ As noted above, the consolidated financial statements consist of the accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016, and the sustainability financial statements, consisting of the 2017 and 2016 Statements of Long-Term Fiscal Projections; the 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance; the 2017 and 2016 Statements of Changes in Social Insurance Amounts; and the related notes to the financial statements.

We performed sufficient audit work to provide this report on the consolidated financial statements. We considered the limitations on the scope of our work regarding the accrual-based consolidated financial statements and the sustainability financial statements in forming our conclusions. Our work was performed in accordance with U.S. generally accepted government auditing standards.

⁶RSI consists of Management's Discussion and Analysis and information in the Required Supplementary Information section of the *Fiscal Year 2017 Financial Report of the United States Government*.

⁷RSSI consists of information on stewardship investments in the Required Supplementary Stewardship Information section of the *Fiscal Year 2017 Financial Report of the United States Government*.

⁸Other information consists of information in the *Fiscal Year 2017 Financial Report of the United States Government* other than the consolidated financial statements, RSI, RSSI, the auditor's report, and the Statement of the Comptroller General of the United States.

⁹The Government Management Reform Act of 1994 has required such reporting, covering the executive branch of government, beginning with financial statements prepared for fiscal year 1997. 31 U.S.C. § 331(e). Treasury and OMB include the legislative and judicial branches in the consolidated financial statements as well.

Management's Responsibility

Management of the federal government is responsible for (1) the preparation and fair presentation of annual consolidated financial statements of the U.S. government in accordance with U.S. generally accepted accounting principles; (2) preparing, measuring, and presenting RSI and RSSI in accordance with U.S. generally accepted accounting principles; (3) preparing and presenting other information included in documents containing the consolidated financial statements and auditor's report, and ensuring the consistency of that information with the consolidated financial statements, RSI, and RSSI; and (4) maintaining effective internal control over financial reporting, including the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express opinions on these consolidated financial statements based on conducting the audit in accordance with U.S. generally accepted government auditing standards. We are also responsible for applying certain limited procedures to the RSI, RSSI, and other information included with the consolidated financial statements. Because of the matters discussed below, we were unable to obtain sufficient appropriate evidence to provide a basis for audit opinions on the consolidated financial statements.

Basis for Disclaimers of Opinion on the Consolidated Financial Statements

Accrual-Based Consolidated Financial Statements

The federal government is not able to demonstrate the reliability of significant portions of the accompanying accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016, principally resulting from limitations related to certain material weaknesses in internal control over financial reporting and other limitations affecting the reliability of these financial statements and the scope of our work as discussed below.¹⁰ As a result of these limitations, readers are cautioned that amounts reported in the accrual-based consolidated financial statements and related notes may not be reliable.

The federal government did not maintain adequate systems or have sufficient appropriate evidence to support certain material information reported in the accompanying accrual-based consolidated financial statements. The underlying material weaknesses in internal control, which have existed for years, contributed to our disclaimer of opinion on the accrual-based consolidated financial statements. Specifically, these weaknesses concerned the federal government's inability to

¹⁰Such limitations include (1) the Department of Defense, the Department of Housing and Urban Development, and the Railroad Retirement Board each received a disclaimer of opinion on their respective fiscal year 2017 financial statements; (2) the Department of Energy's audited financial statements for fiscal year 2017 were not issued as of the date of this audit report; (3) the Department of Agriculture obtained an unmodified opinion on its consolidated Balance Sheet as of September 30, 2017, but its consolidated Statement of Net Cost, consolidated Statement of Changes in Net Position, combined Statement of Budgetary Resources, and the related Notes for the fiscal year ended September 30, 2017, were not audited; and (4) for fiscal year 2017, the financial information for Defense Security Cooperation Agency and the General Fund of the U.S. Government was not audited.

- satisfactorily determine that property, plant, and equipment and inventories and related property, primarily held by the Department of Defense (DOD), were properly reported in the accrual-based consolidated financial statements;
- reasonably estimate or adequately support amounts reported for certain liabilities, such as environmental and disposal liabilities, or determine whether commitments and contingencies were complete and properly reported;
- support significant portions of the reported total net cost of operations, most notably related to DOD, and adequately reconcile disbursement activity at certain federal entities;
- adequately account for and reconcile intragovernmental activity and balances between federal entities;
- reasonably assure that the consolidated financial statements are (1) consistent with the underlying audited entities' financial statements, (2) properly balanced, and (3) in accordance with U.S. generally accepted accounting principles; and
- reasonably assure that the information in the (1) Reconciliations of Net Operating Cost and Budget Deficit and (2) Statements of Changes in Cash Balance from Budget and Other Activities is complete and consistent with the underlying information in the audited entities' financial statements and other financial data.

These material weaknesses continued to (1) hamper the federal government's ability to reliably report a significant portion of its assets, liabilities, costs, and other related information; (2) affect the federal government's ability to reliably measure the full cost, as well as the financial and nonfinancial performance, of certain programs and activities; (3) impair the federal government's ability to adequately safeguard significant assets and properly record various transactions; and (4) hinder the federal government from having reliable financial information to operate in an efficient and effective manner. Due to these material weaknesses and to other limitations on the scope of our work discussed below, additional issues may exist that were not identified and could affect the accrual-based consolidated financial statements. Appendix II describes these material weaknesses in more detail and highlights the primary effects of these material weaknesses on the accompanying accrual-based consolidated financial statements and on the management of federal government operations.

Sustainability Financial Statements

Significant uncertainties (discussed in Note 22 to the consolidated financial statements), which primarily relate to the achievement of projected reductions in Medicare cost growth, affect the sustainability financial statements. In addition, the material weakness related to the Reconciliations of Net Operating Cost and Budget Deficit and the Statements of Changes in Cash Balance from Budget and Other Activities, discussed above, hampers the federal government's ability to demonstrate the reliability of historical budget information used for certain key inputs to the 2017 and 2016 Statements of Long-Term Fiscal Projections. As a result of these significant uncertainties and this material weakness, readers are cautioned that amounts reported in the 2017 and 2016 Statements of Long-Term Fiscal Projections; the 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance; the 2017 and 2016 Statements of Changes in Social Insurance Amounts; and the related notes to these financial statements may

not fairly present, in all material respects, the sustainability information for those years in accordance with U.S. generally accepted accounting principles.

For 2017 and 2016, these significant uncertainties primarily relate to the following.

- Medicare projections in the 2017 and 2016 Statements of Long-Term Fiscal Projections and the 2017, 2016, and 2015 Statements of Social Insurance were based on benefit formulas under current law and included a significant reduction in Medicare payment rate updates for productivity improvements for most categories of Medicare providers,¹¹ based on full implementation of the provisions of the Patient Protection and Affordable Care Act, as amended (ACA),¹² and physician payment updates specified by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA).¹³
- Management has noted that actual future costs for Medicare are likely to exceed those shown by the current law projections presented in the 2017, 2016, and 2015 Statements of Social Insurance due, for example, to the likelihood of modifications to the scheduled reductions in Medicare payment rate updates for productivity adjustments relating to most categories of Medicare providers and to the specified physician payment updates. The extent to which actual future costs exceed the current law amounts due to changes to the scheduled reductions in Medicare payment rate updates for productivity adjustments and to specified physician payment updates depends on both the specific changes that might be enacted and whether enacted legislation would include further provisions to help offset such costs. Consequently, there are significant uncertainties concerning the achievement of these projected reductions in Medicare payment rate updates.
- Management has developed an illustrative alternative projection intended to provide additional context regarding the long-term sustainability of the Medicare program and to illustrate the uncertainties in the Statement of Social Insurance projections. The present value of future estimated expenditures in excess of future estimated revenue for Medicare, included in the illustrative alternative projection in Note 22, exceeds the \$33.5 trillion estimate in the 2017 Statement of Social Insurance by \$12.0 trillion.
- Management noted that these significant uncertainties about projected reductions in health care cost growth also affect the projected Medicare and Medicaid costs reported in the 2017 and 2016 Statements of Long-Term Fiscal Projections.

¹¹Under the Patient Protection and Affordable Care Act's productivity adjustment provisions, productivity improvements are expected to result in lower overall Medicare spending due to smaller annual increases in the Medicare payment rates paid to many health care providers. This is often referred to as a reduction in Medicare payment rate updates. The health care provider categories affected include, but are not limited to, inpatient/outpatient hospital services, skilled nursing facilities, home health care, ambulance, ambulatory surgical centers, durable medical equipment, and prosthetics.

¹²ACA, Pub. L. No. 111-148, 124 Stat. 119 (Mar. 23, 2010), as amended by the Health Care and Education Reconciliation Act of 2010, Pub. L. No. 111-152, 124 Stat. 1029 (Mar. 30, 2010). In this report, references to the ACA include any amendments made by the Health Care and Education Reconciliation Act of 2010.

¹³MACRA, Pub. L. No. 114-10, title I, § 101, 129 Stat. 87, 89 (Apr. 16, 2015). MACRA included many provisions that affect Medicare, including the repeal of the sustainable growth rate formula for calculating annual updates to Medicare reimbursement payment rates to physicians and certain nonphysician medical providers and established an alternative set of annual updates.

The 2014 and 2013 Statements of Social Insurance were affected by significant uncertainties, primarily related to the achievement of projected reductions in Medicare payment rate updates for productivity improvements. The 2013 Statement of Social Insurance was also affected by uncertainties related to projected reductions in Medicare payment rates for physician services. Specifically, the Medicare projections in the 2013 Statement of Social Insurance were based on benefit formulas in current law and included significant reductions in Medicare payment rates for productivity improvements and physician services.

The 2014 Statement of Social Insurance reflected a change from the assumption regarding scheduled reductions in Medicare payment rates for physician services that was used in the 2013 Statement of Social Insurance. Specifically, the 2014 Statement of Social Insurance reflected a projected baseline that assumed that the physician payment rate reductions would not occur and that physician payment rates would annually increase at a rate equal to the average sustainable growth rate override that occurred over the 10-year period ending on March 31, 2015. For 2014 and 2013, management noted that actual future costs for Medicare were likely to exceed those shown by the current law projections presented in the 2014 and 2013 Statements of Social Insurance due, for example, to the likelihood of modifications to the scheduled reductions in Medicare payment rates for productivity adjustments.

Projections of Medicare costs are sensitive to assumptions about future decisions by policymakers and about the behavioral responses of consumers, employers, and health care providers as policy, incentives, and the health care sector change over time. Such secondary impacts are not fully reflected in the sustainability financial statements but could be expected to influence the excess cost growth rate used in the projections.¹⁴ Key drivers of uncertainty about the excess cost growth rate include the future development and deployment of medical technology, the evolution of personal income, and the cost and availability of insurance, as well as federal policy changes, such as the implementation of the ACA. The Required Supplementary Information section of the *2017 Financial Report* includes unaudited information concerning how changes in various assumptions would change the present value of future estimated expenditures in excess of future estimated revenue. As discussed in that section, the projections are very sensitive to changes in the health care cost growth assumption.

As discussed in Notes 22 and 23 to the financial statements, the sustainability financial statements are based on management's assumptions. These sustainability financial statements present the present value of the U.S. government's estimated future receipts and future spending using a projection period sufficient to illustrate long-term sustainability.¹⁵ The sustainability financial statements are intended to aid users in assessing whether future resources will likely be sufficient to sustain public services and to meet obligations as they come due. The Statements of Social Insurance and Changes in Social Insurance Amounts are based on income and benefit formulas in current law (except for the 2014 Medicare projections, which use the projected baseline) and assume that scheduled benefits will continue after any related trust funds are exhausted. The Statements of Long-Term Fiscal Projections are based on the continuation of current policy and also assume that scheduled benefits will continue after any related trust funds are exhausted. The sustainability financial statements are not forecasts or predictions.

¹⁴The excess cost growth rate is the increase in health care spending per person relative to the growth of GDP per person after removing the effects of demographic changes on health care spending.

¹⁵The projection period used for the Social Security, Medicare, and Railroad Retirement social insurance programs is 75 years. Beginning in fiscal year 2017, the Black Lung program has a rolling 25-year projection period. For fiscal years 2013 through 2016, the Black Lung program projection period was through September 30, 2040.

In preparing the sustainability financial statements, management considers and selects assumptions and data that it believes provide a reasonable basis to illustrate whether current policy or law is sustainable. Assumptions underlying such sustainability information do not consider changes in policy or all potential future events that could affect future receipts, future spending, and sustainability, such as, for example, implementation of policy changes to avoid trust fund exhaustion or unsustainable debt levels.

As discussed in the unaudited Required Supplementary Information section of the *2017 Financial Report*, the Social Security and Medicare Hospital Insurance (Part A) trust funds are, based on achievement of the cost reductions discussed above, projected to be exhausted in 2034 and 2029, respectively, at which time they would be unable to pay the full amount of scheduled future benefits.¹⁶ For Social Security, future revenues were projected to be sufficient to pay 77 percent of scheduled benefits in 2034, the year of projected trust funds (combined) exhaustion, and decreasing to 73 percent of scheduled benefits in 2091. For Medicare Hospital Insurance (Part A), future revenues were projected to be sufficient to pay 88 percent of scheduled benefits in 2029, the year of projected trust fund exhaustion, declining to 81 percent by 2041, and then gradually increasing to 88 percent of scheduled benefits again in 2091.

Because of the large number of factors that affect the sustainability financial statements and the fact that future events and circumstances cannot be estimated with certainty, even if current policy is continued, there will be differences between the estimates in the sustainability financial statements and the actual results, and those differences may be material.

Other Limitations on the Scope of Our Work

For fiscal years 2017 and 2016, there were other limitations on the scope of our work, in addition to the material weaknesses and significant uncertainties noted above, that contributed to our disclaimers of opinion on the consolidated financial statements. Such limitations primarily relate to our ability to obtain adequate representations from management. Treasury and OMB depend on representations from certain federal entities to provide their representations to us regarding the U.S. government's consolidated financial statements. Treasury and OMB were unable to provide us with adequate representations regarding the U.S. government's accrual-based consolidated financial statements for fiscal years 2017 and 2016, primarily because of insufficient or no representations provided to them by certain federal entities, including DOD.

Disclaimers of Opinion on the Consolidated Financial Statements

Accrual-Based Consolidated Financial Statements

Because of the significance of the related matters described in the Basis for Disclaimer of Opinion paragraphs above, we were not able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on the accrual-based consolidated financial statements. Accordingly, we do not express an opinion on the accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016.

¹⁶The combined Social Security trust funds consist of the Federal Old-Age and Survivors Insurance trust fund and the Federal Disability Insurance trust fund, whose assets are projected to be exhausted in 2035 and 2028, respectively.

Sustainability Financial Statements

Because of the significance of the related matters described in the Basis for Disclaimer of Opinion paragraphs above, we were not able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on the Statements of Long-Term Fiscal Projections for 2017 and 2016; the Statements of Social Insurance for 2017, 2016, 2015, 2014, and 2013; and the Statements of Changes in Social Insurance Amounts for 2017 and 2016. Accordingly, we do not express an opinion on these sustainability financial statements.

Emphasis of Matters

The following key items deserve emphasis in order to put the information contained in the consolidated financial statements and the Management's Discussion and Analysis section of the *2017 Financial Report* into context. However, our disclaimers of opinion noted above are not modified with respect to these matters.

Equity Investments Related to the Federal Government's Actions to Stabilize Financial Markets and to Promote Economic Recovery

In 2008, during the financial crisis, the federal government placed the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac) under conservatorship and entered into preferred stock purchase agreements with these government-sponsored enterprises (GSE) to help ensure their financial stability. The agreements with the GSEs could affect the federal government's financial position. As of September 30, 2017, the federal government continued to report about \$93 billion of investments in the GSEs, which is net of about \$102 billion in valuation losses.

In valuing these equity investments, management considered and selected assumptions and data that it believed provided a reasonable basis for the estimated values reported in the accrual-based consolidated financial statements. However, as discussed in Note 1 to the consolidated financial statements, there are many factors affecting these assumptions and estimates that are inherently subject to substantial uncertainty arising from the uniqueness of the transactions and the likelihood of future changes in general economic, regulatory, and market conditions. As such, there will be differences between the estimated values as of September 30, 2017, and the actual results, and such differences may be material. Also, as discussed in Note 1 to the consolidated financial statements, the financial statements do not include the assets, liabilities, or results of operations of entities in which Treasury holds either a direct, indirect, or beneficial equity interest. Treasury and OMB have determined that none of the entities meet the criteria for a federal entity.¹⁷

Long-Term Fiscal Challenges

The 2017 Statement of Long-Term Fiscal Projections and related information in Note 23 and in the unaudited Required Supplementary Information section of the *2017 Financial Report* show that absent policy changes, the federal government continues to face an unsustainable long-

¹⁷For additional information on the criteria used to determine which federal entities are included in the reporting entity for the consolidated financial statements, as well as the reasons for not including certain entities, such as Fannie Mae and Freddie Mac, see app. A of the *2017 Financial Report*.

term fiscal path.¹⁸ For the 2017 projections, debt-to-gross domestic product (GDP) at the end of the 75-year projection period was higher than in the 2016 and 2015 projections. The budget deficit increased for the second consecutive year in fiscal year 2017. Although the budget deficit projections in the *2017 Financial Report* show a slight improvement in the near term with the budget deficit below current levels for the next 5 years, it increases beginning in 2023. Over the long term, the imbalance between spending and revenue that is built into current law and policy is projected to lead to continued growth of the deficit and debt held by the public as a share of GDP. This situation—in which debt grows faster than GDP—means the current federal fiscal path is unsustainable.

Under these projections, spending for the major health and retirement programs are projected to increase more rapidly than GDP in the coming decades due to an aging population and projected continued increases in health care costs. The projections for Social Security and Medicare are based on the same assumptions underlying the information presented in the Statement of Social Insurance and assume that the provisions enacted in the ACA designed to slow the growth of Medicare costs are sustained and remain effective throughout the projection period.¹⁹ They also reflect the effects of MACRA, which, among other things, revised the methodology for determining physician payment rates. If, however, the Medicare cost containment measures and physician payment rate methodology are not sustained over the long term—concerns expressed by the Trustees of the Medicare trust funds, the Centers for Medicare & Medicaid Services' Chief Actuary, the Congressional Budget Office (CBO), and others—spending on federal health care programs will grow more rapidly than assumed in the projections.

GAO and CBO prepare long-term federal fiscal simulations, which also continue to show debt held by the public rising as a share of GDP in the long term.²⁰ GAO, CBO, and the 2017 Statement of Long-Term Fiscal Projections all project that debt held by the public as a share of GDP will surpass its historical high (106 percent in 1946) within the next 14 to 22 years. The Tax Cuts and Jobs Act will hold important implications for this timeframe. All of these long-term projections each use somewhat different assumptions, but their results are the same; absent policy changes, the federal government's fiscal path is unsustainable.

At the end of fiscal year 2017, debt held by the public reached about 76 percent of GDP, far above the post-World War II (since 1946) average of 45 percent. Debt held by the public at these high levels could limit the federal government's flexibility to address emerging issues and unforeseen challenges, such as another economic downturn or large-scale disaster. These

¹⁸The 2017 Statement of Long-Term Fiscal Projections is based on current policy as of September 30, 2017. Therefore, the 2017 projections, related footnotes, and Required Supplementary Information do not reflect the effects of the Tax Cuts and Jobs Act, Pub. L. No. 115-97, 131 Stat. 2054, enacted on December 22, 2017, or any other legislation enacted after September 30, 2017 that changes policy that was in effect as of the end of the fiscal year. Management notes that next year's 2018 Statement of Long-Term Fiscal Projections in the *Financial Report* will incorporate the effects of such legislation enacted after September 30, 2017, based on an updated economic forecast and other economic developments.

¹⁹ACA, Pub. L. No. 111-148, 124 Stat. 119 (Mar. 23, 2010), as amended by the Health Care and Education Reconciliation Act of 2010, Pub. L. No. 111-152, 124 Stat. 1029 (Mar. 30, 2010).

²⁰Similar to the 2017 Statement of Long-Term Fiscal Projections, GAO and CBO simulations also do not reflect the effects of the Tax Cuts and Jobs Act or other legislation enacted after September 30, 2017. For more information on GAO's simulations, see GAO, *The Nation's Fiscal Health: Action is Needed to Address the Federal Government's Fiscal Future*, GAO-17-237SP (Washington, D.C.: Jan. 17, 2017). For more information on CBO's simulations, see Congressional Budget Office, *The 2017 Long-Term Budget Outlook* (Washington, D.C.: March 2017).

unforeseen events, also known as fiscal risks or fiscal exposures, place additional pressure on the federal budget. They are responsibilities, programs, and activities that may legally commit or create expectations for future federal spending based on current policy, past practices, or other factors.²¹ A more complete understanding of them can help policymakers anticipate changes in future spending and can enhance oversight of federal resources.

Other Matters

Required Supplementary Information and Required Supplementary Stewardship Information

U.S. generally accepted accounting principles issued by the Federal Accounting Standards Advisory Board (FASAB) require that RSI and RSSI be presented in the *2017 Financial Report* to supplement the financial statements. Although RSI and RSSI are not a part of the financial statements, FASAB considers this information to be an essential part of financial reporting for placing the financial statements in appropriate operational, economic, or historical context. We were unable to apply certain limited procedures to the RSI and RSSI in accordance with U.S. generally accepted government auditing standards because of the material weaknesses and other scope limitations discussed in this audit report. We did not audit and do not express an opinion or provide any assurance on the RSI or RSSI.

Other Information

Other information included in the *2017 Financial Report* contains a wide range of information, some of which is not directly related to the consolidated financial statements. This information is presented for purposes of additional analysis and is not a required part of the consolidated financial statements, RSI, or RSSI. We read the other information included with the consolidated financial statements in order to identify material inconsistencies, if any, with the consolidated financial statements. We did not audit and do not express an opinion or provide any assurance on the other information in the *2017 Financial Report*.

Readers are cautioned that the material weaknesses, significant uncertainties, and other scope limitations discussed in this audit report may affect the reliability of certain information contained in the RSI, RSSI, and other information that is taken from the same data sources as the accrual-based consolidated financial statements and the sustainability financial statements.

CFO Act Agency Financial Management Systems

The federal government's ability to efficiently and effectively manage and oversee its day-to-day operations and programs relies heavily on the ability of entity financial management systems to produce complete, reliable, timely, and consistent financial information for use by executive branch agencies and Congress.²² The Federal Financial Management Improvement Act of 1996 (FFMIA) was designed to lead to system improvements that would result in CFO Act agency managers routinely having access to reliable, useful, and timely financial-related information with which to measure performance and increase accountability throughout the year.

²¹GAO-17-237SP.

²²The Federal Financial Management Improvement Act of 1996, which is reprinted in 31 U.S.C. § 3512 note, defines "financial management systems" to include the financial systems and the financial portions of mixed systems necessary to support financial management, including automated and manual processes, procedures, controls, data, hardware, software, and support personnel dedicated to the operation and maintenance of system functions.

The 24 CFO Act agencies are responsible for implementing and maintaining financial management systems that substantially comply with the requirements of FFMIA. FFMIA requires auditors, as part of the 24 CFO Act agencies' financial statement audits, to report whether those agencies' financial management systems substantially comply with (1) federal financial management systems requirements, (2) applicable federal accounting standards, and (3) the federal government's *U.S. Standard General Ledger* at the transaction level.

For fiscal year 2017, auditors at 10 of 23 CFO Act agencies reported that the agencies' financial management systems did not substantially comply with one or more of the three FFMIA requirements.²³ For fiscal year 2016, auditors at 11 of the 24 CFO Act agencies reported that the agencies' financial management systems did not substantially comply with one or more of the three FFMIA requirements. Agency management at the 24 CFO Act agencies also annually report on FFMIA compliance. For fiscal year 2017, agency management at 8 of 23 CFO Act agencies reported that their agencies' financial management systems did not substantially comply with one or more of the three FFMIA requirements. For fiscal year 2016, agency management at 9 of the 24 CFO Act agencies reported that their agencies' financial management systems did not substantially comply with one or more of the three FFMIA requirements. Based on agency financial reports, differences in the assessments of substantial compliance between the auditors and agency management reflect differences in management's and auditors' views regarding the impact of reported deficiencies on agencies' financial management systems.

Long-standing financial management systems weaknesses at several large CFO Act agencies, along with the size and complexity of the federal government, continue to present a formidable management challenge in providing accountability to the nation's taxpayers and have contributed significantly to certain of the material weaknesses and other limitations discussed in this audit report.

Report on Internal Control over Financial Reporting

Management's Responsibility

Management of the federal government is responsible for (1) maintaining effective internal control over financial reporting, including the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error, and (2) evaluating the effectiveness of internal control over financial reporting, based on criteria established under the Federal Managers' Financial Integrity Act (FMFIA).²⁴

²³As of the issue date of this audit report, the audited financial statements were not issued for one of the CFO Act agencies—the Department of Energy.

²⁴31 U.S.C. § 3512 (c), (d) (commonly referred to as FMFIA). This act requires executive agency heads to evaluate and report annually to the President and Congress on the adequacy of their internal control and accounting systems and on actions to correct significant problems.

Auditor's Responsibility

The purpose of an audit of financial statements is to express an opinion on the financial statements. An audit of financial statements includes considering internal control over financial reporting to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of internal control over financial reporting. Accordingly, we do not express an opinion on the effectiveness of internal control over financial reporting. We did not consider all internal controls relevant to operating objectives as broadly established under FMFIA, such as those controls relevant to preparing performance information and ensuring efficient operations.

Our responsibility is to report any material weaknesses or significant deficiencies in internal control over financial reporting for fiscal year 2017 that come to our attention as a result of our audit.²⁵ Based on the scope of our work and the effects of the other limitations on the scope of our audit noted throughout this audit report, our internal control work was not designed to, and would not necessarily, identify all deficiencies in internal control, including those that might be material weaknesses or significant deficiencies. Therefore, additional material weaknesses or significant deficiencies may exist that were not identified. Our work was performed in accordance with U.S. generally accepted government auditing standards.

Definitions and Inherent Limitations of Internal Control over Financial Reporting

An entity's internal control over financial reporting is a process effected by those charged with governance, management, and other personnel, the objectives of which are to provide reasonable assurance that (1) transactions are properly recorded, processed, and summarized to permit the preparation of financial statements in accordance with U.S. generally accepted accounting principles, and assets are safeguarded against loss from unauthorized acquisition, use, or disposition, and (2) transactions are executed in accordance with provisions of applicable laws (including those governing the use of budget authority), regulations, contracts, and grant agreements, noncompliance with which could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent, or detect and correct, misstatements due to fraud or error.

Material Weaknesses Resulted in Ineffective Internal Control over Financial Reporting

The material weaknesses discussed in this audit report resulted in ineffective internal control over financial reporting. Consequently, the federal government's internal control did not provide reasonable assurance that a material misstatement of the consolidated financial statements would be prevented, or detected and corrected, on a timely basis.

In addition to the material weaknesses that contributed to our disclaimers of opinion on the accrual-based consolidated financial statements and the sustainability financial statements, which were discussed previously, we found the following three other material weaknesses in internal control. These other material weaknesses were the federal government's inability to

²⁵A significant deficiency is a deficiency, or a combination of deficiencies, in internal control over financial reporting that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

- determine the full extent to which improper payments occur and reasonably assure that appropriate actions are taken to reduce them,
- identify and resolve information security control deficiencies and manage information security risks on an ongoing basis, and
- effectively manage its tax collection activities.

These material weaknesses are discussed in more detail in appendix III, including the primary effects of the material weaknesses on the accompanying accrual-based consolidated financial statements and on the management of federal government operations.

We also found two significant deficiencies in the federal government's internal control related to implementing effective internal controls at certain federal entities for the following areas:

- loans receivable and loan guarantee liabilities and
- federal grants management.

These significant deficiencies are discussed in more detail in appendix IV.

Further, individual federal entity financial statement audit reports identified additional control deficiencies that were reported by the entities' auditors as either material weaknesses or significant deficiencies at the individual entity level. We do not consider these additional deficiencies to represent material weaknesses or significant deficiencies with respect to the U.S. government's consolidated financial statements.

Intended Purpose of Report on Internal Control over Financial Reporting

The purpose of this report on internal control over financial reporting is solely to describe the scope of our consideration of internal control over financial reporting, and the results of our procedures, and not to provide an opinion on the effectiveness of internal control over financial reporting. This report on internal control over financial reporting is an integral part of an audit performed in accordance with U.S. generally accepted government auditing standards. Accordingly, this report on internal control over financial reporting is not suitable for any other purpose.

Report on Compliance with Laws, Regulations, Contracts, and Grant Agreements

Management's Responsibility

Management of the federal government is responsible for the federal government's compliance with laws, regulations, contracts, and grant agreements.

Auditor's Responsibility

An audit of federal financial statements includes testing compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements that have a direct effect on the determination of material amounts and disclosures in the consolidated financial statements, and performing certain other limited procedures. Accordingly, we did not test the federal

government's compliance with all laws, regulations, contracts, and grant agreements. Due to the limitations discussed below and the scope of our procedures, noncompliance may occur and not be detected by these tests.

Our objective was not to provide an opinion on the federal government's compliance with laws, regulations, contracts, and grant agreements. Accordingly, we do not express such an opinion. Our work was performed in accordance with U.S. generally accepted government auditing standards.

Results of Our Tests for Compliance with Laws, Regulations, Contracts, and Grant Agreements

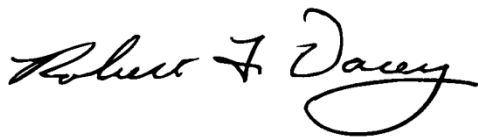

Our work to test compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements was limited by certain of the material weaknesses and other scope limitations discussed in this audit report. U.S. generally accepted government auditing standards and OMB guidance require auditors to report on entities' compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements. Certain component entity audit reports contain instances of noncompliance. None of these instances were deemed to be reportable noncompliance with regard to the accompanying U.S. government's consolidated financial statements.

Intended Purpose of Report on Compliance with Laws, Regulations, Contracts, and Grant Agreements

The purpose of this report on compliance with laws, regulations, contracts, and grant agreements is solely to describe the scope of our testing of compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements, and the results of that testing, and not to provide an opinion on compliance. This report on compliance with laws, regulations, contracts, and grant agreements is an integral part of an audit performed in accordance with U.S. generally accepted government auditing standards in considering compliance. Accordingly, this report on compliance with laws, regulations, contracts, and grant agreements is not suitable for any other purpose.

Agency Comments

We provided a draft of this audit report to Treasury and OMB officials, who provided technical comments that we have incorporated as appropriate. Treasury and OMB officials expressed their continuing commitment to addressing the problems this report outlines.

Robert F. Dacey
Chief Accountant
U.S. Government Accountability Office

February 7, 2018

Appendix I

Objectives, Scope, and Methodology

Our objectives were to audit the consolidated financial statements consisting of the (1) accrual-based consolidated financial statements as of and for the fiscal years ended September 30, 2017, and 2016, and (2) sustainability financial statements, which consist of the 2017 and 2016 Statements of Long-Term Fiscal Projections; the 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance; and the 2017 and 2016 Statements of Changes in Social Insurance Amounts. Our objectives also included reporting on internal control over financial reporting and on compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements.

The Chief Financial Officers Act of 1990 (CFO Act), as expanded by the Government Management Reform Act of 1994 (GMRA), requires the inspectors general of the 24 CFO Act agencies to be responsible for annual audits of agency-wide financial statements prepared by these agencies.²⁶ GMRA requires GAO to be responsible for the audit of the U.S. government's consolidated financial statements,²⁷ and the Accountability of Tax Dollars Act of 2002 (ATDA) requires most other executive branch entities to annually prepare financial statements and have them audited.²⁸ The Office of Management and Budget and the Department of the Treasury (Treasury) have identified 39 federal entities that are significant to the U.S. government's fiscal year 2017 consolidated financial statements, including the 24 CFO Act agencies.²⁹ We consider these 39 entities to be significant component entities for purposes of our audit of the consolidated financial statements. Our work was performed in coordination and cooperation with the inspectors general and independent public accountants for these significant component entities to achieve our respective audit objectives. Our audit approach regarding the accrual-based consolidated financial statements primarily focused on determining the current status of the material weaknesses that contributed to our disclaimer of opinion on the accrual-based consolidated financial statements and the other material weaknesses affecting internal control that we reported in our report on the consolidated financial statements for fiscal year 2016.³⁰ We also separately audited the financial statements of certain component entities, and parts of a significant component entity, including the following.

- We audited and expressed an unmodified opinion on the Internal Revenue Service's (IRS) financial statements as of and for the fiscal years ended September 30, 2017, and 2016.³¹ In fiscal years 2017 and 2016, IRS collected about \$3.4 trillion and \$3.3 trillion, respectively, in tax payments each year and paid about \$437 billion and \$426 billion, respectively, in refunds to taxpayers. For fiscal year 2017, we continued to report a material weakness in

²⁶31 U.S.C. § 3521(e). GMRA authorized the Office of Management and Budget to designate agency components that also would receive financial statement audits. See 31 U.S.C. § 3515(c).

²⁷GMRA, Pub. L. No. 103-356, § 405(c), 108 Stat. 3410, 3416-17 (Oct. 13, 1994), *codified at* 31 U.S.C. § 331(e)(2).

²⁸ATDA, Pub. L. No. 107-289, 116 Stat. 2049 (Nov. 7, 2002), *codified at* 31 U.S.C. § 3515.

²⁹See *Treasury Financial Manual*, vol. I, pt. 2, ch. 4700, for a listing of the 39 entities.

³⁰GAO, *Financial Audit: Fiscal Years 2016 and 2015 Consolidated Financial Statements of the U.S. Government*, GAO-17-283R (Washington, D.C.: Jan. 12, 2017).

³¹GAO, *Financial Audit: IRS's Fiscal Years 2017 and 2016 Financial Statements*, GAO-18-165 (Washington, D.C.: Nov. 9, 2017).

internal control over unpaid assessments that resulted in ineffective internal control over financial reporting. In addition, we continued to report a significant deficiency in IRS's internal control over financial reporting systems. We also reported that we found no reportable noncompliance for fiscal year 2017 with provisions of applicable laws, regulations, contracts, and grant agreements we tested.

- We audited and expressed an unmodified opinion on the Schedules of Federal Debt managed by Treasury's Bureau of the Fiscal Service (Fiscal Service) for the fiscal years ended September 30, 2017, and 2016.³² For these 2 fiscal years, the schedules reported (1) approximately \$14.7 trillion (2017) and \$14.2 trillion (2016) of federal debt held by the public,³³ (2) about \$5.6 trillion (2017) and \$5.4 trillion (2016) of intragovernmental debt holdings,³⁴ and (3) about \$296 billion (2017) and \$273 billion (2016) of interest on federal debt held by the public. We also reported that although internal controls could be improved, Fiscal Service maintained, in all material respects, effective internal control over financial reporting relevant to the Schedule of Federal Debt as of September 30, 2017. In addition, we reported that we found no reportable noncompliance for fiscal year 2017 with provisions of applicable laws, regulations, contracts, and grant agreements we tested related to the Schedule of Federal Debt.
- We audited and expressed unmodified opinions on the U.S. Securities and Exchange Commission's (SEC) and its Investor Protection Fund's (IPF) financial statements as of and for the fiscal years ended September 30, 2017, and 2016.³⁵ We also reported that SEC maintained, in all material respects, effective internal control over financial reporting for both the entity as a whole and IPF as of September 30, 2017. In addition, we reported that we found no reportable noncompliance for either SEC or IPF for fiscal year 2017 with provisions of applicable laws, regulations, contracts, and grant agreements we tested.
- We audited and expressed an unmodified opinion on the Federal Housing Finance Agency's (FHFA) financial statements as of and for the fiscal years ended September 30, 2017, and 2016.³⁶ We also reported that FHFA maintained, in all material respects, effective internal control over financial reporting as of September 30, 2017. In addition, we reported that we found no reportable noncompliance for fiscal year 2017 with provisions of applicable laws, regulations, contracts, and grant agreements we tested.

³²GAO, *Financial Audit: Bureau of the Fiscal Service's Fiscal Years 2017 and 2016 Schedules of Federal Debt*, GAO-18-134 (Washington, D.C.: Nov. 9, 2017).

³³Debt held by the public on the Schedules of Federal Debt represents federal debt issued by Treasury and held by investors outside of the federal government, including individuals, corporations, state or local governments, the Federal Reserve, and foreign governments.

³⁴Intragovernmental debt holdings represent federal debt owed by Treasury to federal government accounts, primarily federal trust funds, such as Social Security and Medicare.

³⁵GAO, *Financial Audit: Securities and Exchange Commission's Fiscal Years 2017 and 2016 Financial Statements*, GAO-18-186R (Washington, D.C.: Nov. 15, 2017).

³⁶GAO, *Financial Audit: Federal Housing Finance Agency's Fiscal Years 2017 and 2016 Financial Statements*, GAO-18-166R (Washington, D.C.: Nov. 15, 2017).

- We audited and expressed an unmodified opinion on the Office of Financial Stability's (OFS) financial statements for the Troubled Asset Relief Program (TARP) as of and for the fiscal years ended September 30, 2017, and 2016.³⁷ We also reported that OFS maintained, in all material respects, effective internal control over financial reporting for TARP as of September 30, 2017. In addition, we reported that we found no reportable noncompliance for fiscal year 2017 with provisions of applicable laws, regulations, contracts, and grant agreements we tested.
- We audited and expressed an unmodified opinion on the Bureau of Consumer Financial Protection's (CFPB) financial statements as of and for the fiscal years ended September 30, 2017, and 2016.³⁸ We also reported that CFPB maintained, in all material respects, effective internal control over financial reporting as of September 30, 2017. In addition, we reported that we found no reportable noncompliance for fiscal year 2017 with provisions of applicable laws, regulations, contracts, and grant agreements we tested.

In addition, we considered the CFO Act agencies' and certain other federal entities' fiscal years 2017 and 2016 financial statements and the related auditors' reports prepared by the inspectors general or contracted independent public accountants. Financial statements and audit reports for these entities provide information about the entities' operations. Each entity audit report also contains details regarding any identified material weaknesses or significant deficiencies and related recommendations for the respective entity. We did not audit, and we do not express an opinion on, any of these individual federal entity financial statements.

We considered the Department of Defense's (DOD) assertion in the *DOD Agency Financial Report for Fiscal Year 2017* regarding DOD's ineffective internal controls over financial reporting and noncompliant financial management systems. In addition, in the DOD Inspector General's fiscal year 2017 report on internal control over financial reporting, the Inspector General cited material weaknesses in several areas, including (1) property, plant, and equipment; (2) inventory and operating material and supplies; (3) environmental liabilities; (4) intragovernmental eliminations; and (5) material amounts of unsupported accounting entries needed to prepare DOD's annual consolidated financial statements.

Our audit approach for the 2017 and 2016 Statements of Long-Term Fiscal Projections focused primarily on assuring that the information relating to the Statements of Social Insurance is properly reflected therein and testing the methodology used as well as evaluating key assumptions. We also evaluated whether the internal control deficiencies concerning the accrual-based consolidated financial statements affected certain key inputs used in generating the projections.

Because of the significance of the amounts presented in the Statements of Social Insurance and Statements of Changes in Social Insurance Amounts related to the Social Security Administration (SSA) and the Department of Health and Human Services (HHS), our audit approach regarding these statements focused primarily on these two agencies. For each federal entity preparing a Statement of Social Insurance and Statement of Changes in Social Insurance

³⁷GAO, *Financial Audit: Office of Financial Stability (Troubled Asset Relief Program) Fiscal Years 2017 and 2016 Financial Statements*, GAO-18-170R (Washington, D.C.: Nov. 9, 2017).

³⁸GAO, *Financial Audit: Bureau of Consumer Financial Protection's Fiscal Years 2017 and 2016 Financial Statements*, GAO-18-185R (Washington, D.C.: Nov. 15, 2017).

Amounts,³⁹ we considered the entity's 2017, 2016, 2015, 2014, and 2013 Statements of Social Insurance and the 2017 and 2016 Statements of Changes in Social Insurance Amounts, as well as the related auditor's reports prepared by the inspectors general or contracted independent public accountants.

We performed sufficient audit work to provide our reports on (1) the consolidated financial statements; (2) internal control over financial reporting; and (3) compliance with selected provisions of applicable laws, regulations, contracts, and grant agreements. We considered the limitations on the scope of our work regarding the accrual-based consolidated financial statements and the sustainability financial statements in forming our conclusions. Our work was performed in accordance with U.S. generally accepted government auditing standards.

³⁹These entities are SSA, HHS, the Railroad Retirement Board, and the Department of Labor.

Appendix II

Material Weaknesses Contributing to Our Disclaimer of Opinion on the Accrual-Based Consolidated Financial Statements

The continuing material weaknesses discussed below contributed to our disclaimer of opinion on the federal government's accrual-based consolidated financial statements.⁴⁰ The federal government did not maintain adequate systems or have sufficient appropriate evidence to support information reported in the accompanying accrual-based consolidated financial statements, as described below.

Property, Plant, and Equipment and Inventories and Related Property

The federal government could not satisfactorily determine that property, plant, and equipment (PP&E) and inventories and related property were properly reported in the accrual-based consolidated financial statements. Most of the PP&E and inventories and related property are the responsibility of the Department of Defense (DOD). As in past years, DOD did not maintain adequate systems or have sufficient records to provide reliable information on these assets. Certain other entities' auditors reported continued deficiencies in internal control procedures and processes related to PP&E.

Deficiencies in internal control over such assets could affect the federal government's ability to fully know the assets it owns, including their location and condition, and its ability to effectively (1) safeguard assets from physical deterioration, theft, or loss; (2) account for acquisitions and disposals of such assets and reliably report asset balances; (3) ensure that the assets are available for use when needed; (4) prevent unnecessary storage and maintenance costs or purchase of assets already on hand; and (5) determine the full costs of programs that use these assets.

Liabilities and Commitments and Contingencies

The federal government could not reasonably estimate or adequately support amounts reported for certain liabilities. For example, DOD was not able to estimate with assurance key components of its environmental and disposal liabilities. In addition, DOD could not support a significant amount of its estimated military postretirement health benefits liabilities included in federal employee and veteran benefits payable. These unsupported amounts related to the cost of direct health care provided by DOD-managed military treatment facilities. Further, the federal government could not determine whether commitments and contingencies, including any related to treaties and other international agreements entered into to further the federal government's interests, were complete and properly reported.

Problems in accounting for liabilities affect the determination of the full cost of the federal government's current operations and the extent of its liabilities. Also, deficiencies in internal control supporting the process for estimating environmental and disposal liabilities could result in improperly stated liabilities, as well as adversely affect the federal government's ability to determine priorities for cleanup and disposal activities and to appropriately consider future budgetary resources needed to carry out these activities. In addition, to the extent disclosures of

⁴⁰The material weakness related to the Reconciliations of Budget Deficit to Net Operating Cost and Changes in Cash Balance also contributed to our disclaimer on the 2017 and 2016 Statements of Long-Term Fiscal Projections.

commitments and contingencies are incomplete or incorrect, reliable information is not available about the extent of the federal government's obligations.

Cost of Government Operations and Disbursement Activity

Reported net costs were affected by the previously discussed material weaknesses in reporting assets and liabilities; material weaknesses in financial statement preparation, as discussed below; and the lack of adequate disbursement reconciliations at certain federal entities. As a result, the federal government was unable to support significant portions of the reported total net cost of operations, most notably those related to DOD.

With respect to disbursements, auditors of DOD and certain other federal entities reported continued control deficiencies in reconciling disbursement activity. For fiscal years 2017 and 2016, inadequate reconciliations of disbursement activity included (1) unreconciled differences between federal entities' and the Department of the Treasury's (Treasury) records of disbursements and (2) unsupported federal entity adjustments, which could also affect the balance sheet.

Unreliable cost information affects the federal government's ability to control and reduce costs, assess performance, evaluate programs, and set fees to recover costs where required or authorized. If disbursements are improperly recorded, this could result in misstatements in the financial statements and in certain data provided by federal entities for inclusion in *The Budget of the United States Government* (President's Budget) concerning obligations and outlays.

Accounting for and Reconciliation of Intragovernmental Activity and Balances

Significant progress has been made over the past few years; however, the federal government continues to be unable to adequately account for and reconcile intragovernmental activity and balances between federal entities. Federal entities are responsible for properly accounting for and reporting their intragovernmental activity and balances in their entity financial statements. When preparing the consolidated financial statements, intragovernmental activity and balances between federal entities should be in agreement and must be subtracted out, or eliminated, from the financial statements. If the two federal entities engaged in an intragovernmental transaction do not both record the same intragovernmental transaction in the same year and for the same amount, the intragovernmental transactions will not be in agreement, resulting in errors (i.e., differences or unmatched amounts) in the consolidated financial statements. The Office of Management and Budget (OMB) and Treasury require the chief financial officers (CFO) of the significant component entities to reconcile, on a quarterly basis, selected intragovernmental activity and balances with their trading partners and resolve identified differences. In addition, these entities are required to report to Treasury, their respective inspectors general, and GAO on the extent and results of intragovernmental activity and balance reconciliation efforts as of the end of the fiscal year.

Treasury has continued to actively work with significant federal component entities to resolve intragovernmental differences through its quarterly scorecard process.⁴¹ This process highlights differences requiring the entities' attention, identifies differences that need to be resolved

⁴¹For each quarter, Treasury produces a scorecard for each significant entity that reports various aspects of the entity's intragovernmental differences with its trading partners, including the composition of the differences by trading partner and category. Entities are expected to resolve, with their respective trading partners, the differences identified in their scorecards.

through a formal dispute resolution process,⁴² and reinforces the entities' responsibilities to resolve intragovernmental differences.

In fiscal year 2017, Treasury created and distributed to its management executives quarterly summaries that reported (1) year-to-year progress in resolving intragovernmental differences and (2) known issues surrounding them, thereby improving its overall monitoring of intragovernmental differences. In addition, Treasury continued to improve its procedures for identifying and monitoring systemic root causes of intragovernmental differences and related corrective action plans to address the root causes. As a result of these and other actions, a significant number of intragovernmental differences were identified and resolved. While progress was made, we continued to note that amounts reported by federal entity trading partners to Treasury were not in agreement by material amounts. Reasons for the differences cited by several CFOs included differing accounting methodologies, accounting errors, and timing differences. In addition, in the DOD Inspector General's fiscal year 2017 report on internal control over financial reporting, the Inspector General reported that DOD, which contributes significantly to the unresolved amounts, could not accurately identify its intragovernmental transactions by customer and was unable to reconcile most of its intragovernmental transactions, which resulted in adjustments that cannot be fully supported.

Further, a significant portion of intragovernmental differences are related to unresolved transactions between the General Fund of the U.S. Government (General Fund)⁴³ and federal entity trading partners related to appropriations and other intragovernmental transactions, which amount to hundreds of billions of dollars. Treasury established more specific guidance regarding General Fund activity and balances and issued this guidance for federal entities to follow in reporting their financial data. Treasury also continues to develop and refine its policies and procedures over accounting for and reporting all significant General Fund activity and balances and reconciling the activity and balances between the General Fund and its trading partners. However, the ability to effectively reconcile General Fund transactions is hampered because General Fund activity and balances have not yet been audited. Treasury will prepare and GAO will audit the fiscal year 2018 Schedules of the General Fund.

As a result of the above-noted circumstances, the federal government's ability to determine the impact of these unresolved differences on the amounts reported in the accrual-based consolidated financial statements is significantly impaired. Resolving the intragovernmental transactions problem remains a difficult challenge and will require a strong and sustained commitment by federal entities to timely resolve differences with their trading partners, as well as continued strong leadership by Treasury and OMB.

Preparation of Consolidated Financial Statements

Treasury, in coordination with OMB, has implemented several corrective actions during the past few years related to the preparation of the consolidated financial statements. Corrective actions included implementing new systems for compiling the consolidated financial statements, improving guidance for collecting data from component entities, and implementing new or

⁴²When an entity and its respective trading partner cannot resolve an intragovernmental difference, the entity must request Treasury to resolve the dispute. Treasury will review the dispute and issue a decision on how to resolve the difference, which the entities must follow.

⁴³The General Fund is a component of Treasury's central accounting function. It is a stand-alone reporting entity that comprises the activities fundamental to funding the federal government (e.g., issued budget authority, cash activity, and debt financing activities).

enhanced procedures to address certain internal control deficiencies detailed in our previously issued management report.⁴⁴ However, the federal government's systems, controls, and procedures were not adequate to reasonably assure that the consolidated financial statements are consistent with the underlying audited entity financial statements, properly balanced, and in accordance with U.S. generally accepted accounting principles (U.S. GAAP). During our fiscal year 2017 audit, we found the following.

- For fiscal year 2017, auditors reported internal control deficiencies at several component entities regarding entities' financial reporting processes that could affect information in those entities' closing packages.⁴⁵ To reasonably assure consistency of underlying entity information and financial data with the U.S. government's consolidated financial statements, entity auditors are required to separately audit and report on the financial information that the significant component entities send to Treasury through closing packages.⁴⁶ As in past years, Treasury had to record significant adjustments to correct errors found in federal entities' audited closing package information. As with the last several years, these errors primarily related to intragovernmental activity and balances and totaled tens of billions of dollars. In addition, Treasury does not have a sufficient process for working with federal entities to reduce or resolve the need for such significant adjustments.
- While progress has been made, Treasury is unable to properly balance the accrual-based consolidated financial statements due to its inability to fully eliminate intragovernmental activity and balances. To make the fiscal years 2017 and 2016 consolidated financial statements balance, Treasury recorded net decreases of \$2.6 billion and \$8.1 billion,⁴⁷ respectively, to net operating cost on the Statements of Operations and Changes in Net Position, which were identified as "Unmatched transactions and balances."⁴⁸ Treasury recorded an additional net \$2.0 billion and \$0.5 billion of unmatched transactions in the Statement of Net Cost for fiscal years 2017 and 2016, respectively. The material weakness in the federal government's ability to account for and reconcile intragovernmental activity and balances, discussed above, significantly contributes to this issue.

⁴⁴Most of the issues we identified in fiscal year 2017 existed in fiscal year 2016, and many have existed for a number of years. Most recently, in July 2017, we reported the issues we identified to Treasury and OMB and provided recommendations for corrective action. See GAO, *Management Report: Improvements Needed in Controls over the Processes Used to Prepare the U.S. Consolidated Financial Statements*, GAO-17-524 (Washington, D.C.: July 12, 2017).

⁴⁵The closing package methodology links federal component entities' audited consolidated department-level financial statements to certain line items, note disclosures, and other information on the U.S. government's consolidated financial statements.

⁴⁶There are 39 significant component entities, including the General Fund; however, the General Fund did not submit a closing package in fiscal year 2017.

⁴⁷The amount of unmatched transactions and balances for fiscal year 2016 was previously reported as \$11.7 billion in the *Fiscal Year 2016 Financial Report of the United States Government*. The fiscal year 2016 accrual-based consolidated financial statements were restated in fiscal year 2017. See Note 1.V. Restatements, in the *Fiscal Year 2017 Financial Report of the United States Government*.

⁴⁸Although Treasury was unable to determine how much of the unmatched transactions and balances relates to net operating cost, it reported this amount as a component of net operating cost in the accompanying consolidated financial statements.

- Over the past several years, Treasury has taken significant actions to assist in ensuring that financial information is reported or disclosed in the consolidated financial statements in accordance with U.S. GAAP. For example, Treasury has developed and implemented U.S. GAAP compliance operating procedures and checklists. However, Treasury's reporting of certain financial information required by U.S. GAAP continues to be impaired. Due to certain control deficiencies noted in this audit report—for example, commitments and contingencies related to treaties and other international agreements—Treasury is precluded from determining if additional disclosure in the consolidated financial statements is required by U.S. GAAP, and we are precluded from determining whether the omitted information is material. Further, Treasury's ability to report information in accordance with U.S. GAAP will also remain impaired until federal entities, such as DOD, can provide Treasury with complete and reliable information required to be reported in the consolidated financial statements.
- In fiscal year 2017, Treasury continued to make progress with corrective actions intended to resolve internal control deficiencies in the processes used to prepare the consolidated financial statements. For example, Treasury issued guidance in the *Treasury Financial Manual* requiring component entities to report or disclose criminal debt information in conformity with U.S. GAAP in their financial statements and have such information subjected to audit. During its preparation of the consolidated financial statements, Treasury verified that component entities followed such guidance. However, other internal control deficiencies existed in the processes used to prepare the consolidated financial statements.

Until these internal control deficiencies have been fully addressed, the federal government's ability to reasonably assure that the consolidated financial statements are consistent with the underlying audited federal component entities' financial statements, properly balanced, and in accordance with U.S. GAAP will be impaired. In recent years, Treasury has continued to improve its systems and processes for preparing the consolidated financial statements. It is important that Treasury (1) continues to improve its systems and (2) remains committed to maintaining the progress that has been made in this area and building on that progress to make needed improvements to fully address the magnitude of the financial reporting challenges it faces. Resolving the remaining internal control deficiencies continues to be a difficult challenge and will require a strong and sustained commitment from Treasury, OMB, and federal entities.

Reconciliations of Budget Deficit to Net Operating Cost and Changes in Cash Balance

Treasury has been consistently improving its process for preparing the (1) Reconciliation of Net Operating Cost and Budget Deficit and (2) Statement of Changes in Cash Balance from Budget and Other Activities (Reconciliation Statements). For example, during fiscal year 2017, Treasury continued to refine its process to help ensure that reconciling items reported on the Reconciliation Statements are consistent with entity financial information that is processed through Treasury's records. However, the federal government has not established and implemented effective processes and procedures for (1) identifying and reporting all items needed to prepare the Reconciliation Statements and (2) reasonably assuring that the information in these statements was fully consistent with the underlying information in the significant component entities' audited financial statements and other financial data. Until Treasury develops and fully implements an effective process for reasonably assuring completeness and consistency of the information in the statements and is able to fully reconcile this information, the effect on the U.S. government's consolidated financial statements will continue to be unknown.

The Reconciliation Statements report budget deficits for fiscal years 2017 and 2016 of about \$666 billion and \$587 billion, respectively.⁴⁹ The budget deficit is calculated by subtracting actual budget outlays (outlays) from actual budget receipts (receipts). Also, such outlays and receipts are key inputs to the Statements of Long-Term Fiscal Projections. Treasury and OMB continue to lack an effective process for reasonably assuring the consistency of the information among (1) information that Treasury uses to compute the budget deficit reported in the consolidated financial statements, (2) Treasury's records of cash transactions processed through its central accounting function, and (3) information reported in federal entity financial statements and underlying entity financial information and records. Over the past few years, Treasury has made progress by developing and implementing procedures to reconcile outlays and receipts between Treasury's records used to compute the budget deficit reported in the consolidated financial statements and underlying federal entity financial information and records. For example, in fiscal year 2017, Treasury began developing procedures related to leveraging agency Budget and Accrual Reconciliations to be required by Statement of Federal Financial Accounting Standards (SFFAS) 7: *Accounting for Revenue and Other Financing Sources and Concepts for Reconciling Budgetary and Financial Accounting*, as amended.⁵⁰ These reconciliations will assist Treasury in verifying that the amounts presented in the Reconciliations of Net Operating Cost and Budget Deficit Statement are consistent with underlying audited financial data. Also, as noted above, Treasury will prepare and GAO will audit the fiscal year 2018 Schedules of the General Fund, which include key elements reported in the Statement of Changes in Cash Balance from Budget and Other Activities.

In fiscal year 2017, we again noted that several entities' auditors reported internal control deficiencies related to monitoring, accounting, and reporting of budgetary transactions. These control deficiencies could affect the reporting and calculation of the net outlay amounts in the entities' Statements of Budgetary Resources. In addition, such deficiencies may also affect the entities' ability to report reliable budgetary information to Treasury and OMB and may affect the budget deficit reported in the accrual-based consolidated financial statements. Treasury also reports the budget deficit in its *Combined Statement of Receipts, Outlays, and Balances* and in other federal government publications.⁵¹

⁴⁹The budget deficit, receipts, and outlays amounts are reported in Treasury's *Monthly Treasury Statement* and the President's Budget.

⁵⁰SFFAS 7, as amended by SFFAS 53: *Budget and Accrual Reconciliation*, is effective for reporting periods beginning after Sept. 30, 2018, and early adoption is permitted.

⁵¹Treasury's *Combined Statement of Receipts, Outlays, and Balances* presents budget results and cash-related assets and liabilities of the federal government with supporting details. According to Treasury, this report is the recognized official publication of receipts and outlays of the federal government based on entity reporting.

Appendix III

Other Material Weaknesses

Material weaknesses in internal control discussed in this audit report resulted in ineffective controls over financial reporting. In addition to the material weaknesses discussed in appendix II that contributed primarily to our disclaimer of opinion on the accrual-based consolidated financial statements, we found the following three other material weaknesses in internal control.

Improper Payments

The federal government is unable to determine the full extent to which improper payments occur and reasonably assure that appropriate actions are taken to reduce them. Reducing improper payments is critical to safeguarding federal funds.⁵² The Improper Payments Information Act of 2002 (IPIA), as amended by the Improper Payments Elimination and Recovery Act of 2010 (IPERA) and the Improper Payments Elimination and Recovery Improvement Act of 2012 (IPERIA),⁵³ requires federal executive branch entities to (1) review all programs and activities, (2) identify those that may be susceptible to significant improper payments, (3) estimate the annual amount of improper payments for those programs and activities identified as risk susceptible, (4) implement actions to reduce improper payments and set reduction targets with respect to the risk-susceptible programs and activities, and (5) report on the results of addressing the foregoing requirements.

Federal entity improper payment estimates totaled about \$141 billion for fiscal year 2017, based on improper payment estimates reported by federal program or activity.⁵⁴ The government-wide total of reported estimated improper payments, among programs and activities that reported estimates, decreased by over \$3 billion from the prior year estimate of about \$144 billion. Agencies reported decreases in estimated improper payments for several programs and activities, which contributed to the decrease in the government-wide total and helped to offset

⁵²Under the Improper Payments Information Act of 2002, as amended, an improper payment is statutorily defined as any payment that should not have been made or that was made in an incorrect amount (including overpayments and underpayments) under statutory, contractual, administrative, or other legally applicable requirements. It includes any payment to an ineligible recipient, any payment for an ineligible good or service, any duplicate payment, any payment for a good or service not received (except for such payments where authorized by law), and any payment that does not account for credit for applicable discounts. Office of Management and Budget guidance also provides that when an agency's review is unable to discern whether a payment was proper as a result of insufficient or lack of documentation, this payment must also be considered an improper payment.

⁵³IPIA, Pub. L. No. 107-300, 116 Stat. 2350 (Nov. 26, 2002), as amended by IPERA, Pub. L. No. 111-204, 124 Stat. 2224 (July 22, 2010), and IPERIA, Pub. L. No. 112-248, 126 Stat. 2390 (Jan. 10, 2013), and reprinted in 31 U.S.C. § 3321 note.

⁵⁴The *Fiscal Year 2017 Financial Report of the United States Government* did not include a government-wide improper payment estimate or error rate. Since fiscal year 2003, a government-wide estimate and error rate had been reported in *Financial Reports* based on the programs and activities that reported estimates.

increases for certain other programs and activities.⁵⁵ For example, the Department of Health and Human Services (HHS) reported a decrease in estimated improper payments for Medicare Fee-for-Service driven by a decrease in improper payments for home health and inpatient rehabilitation facility claims. It is important to note that pursuant to the Office of Management and Budget (OMB) implementing guidance, reported improper payment estimates include overpayments, underpayments, and payments for which adequate documentation was not found, and may also be based on payment data and sampling drawn from periods that do not coincide with the fiscal year for which the estimates are reported.

The specific programs and activities included in the government-wide total of reported improper payment estimates may change from year to year. Nine federal entities did not report fiscal year 2017 estimated improper payment amounts for 27 risk-susceptible programs and activities, including the Department of Agriculture's (USDA) Supplemental Nutrition Assistance Program (SNAP), HHS's Temporary Assistance for Needy Families (TANF), and 14 programs and activities that received funding under the Disaster Relief Appropriations Act, 2013 (DRAA).⁵⁶ Further, various inspectors general reported deficiencies related to compliance with the criteria listed in IPERA for fiscal year 2016 at their respective federal entities,⁵⁷ including risk-susceptible programs and activities that did not report improper payment estimates, estimation methodologies that may not produce reliable estimates, and risk assessments that may not

⁵⁵For fiscal year 2017, agencies reported decreases in total estimated improper payments in excess of \$1 billion for four programs and increases in total estimated improper payments in excess of \$1 billion for two programs. The four programs with decreases in excess of \$1 billion were the Department of Health and Human Services' (HHS) Medicare Fee-for-Service, HHS's Medicare Advantage (Part C), HHS's Medicare Prescription Drug (Part D), and the Social Security Administration's Old-Age, Survivors, and Disability Insurance. The two programs with increases in excess of \$1 billion were the Department of Veterans Affairs' (VA) Community Care and VA's Prosthetics. In addition, the Department of Housing and Urban Development (HUD) ceased reporting an estimate for certain of its Rental Housing Assistance Programs in fiscal year 2017, contributing to a decrease in excess of \$1 billion to the government-wide total.

⁵⁶Pub. L. No. 113-2, div. A, 127 Stat. 4 (Jan. 29, 2013). Section 904(b) of DRAA deemed all programs and activities receiving appropriations under the act as susceptible to significant improper payments, subjecting such programs and activities to improper payment estimation and reporting requirements under IPIA, as amended. The 27 programs and activities included 13 non-DRAA programs and activities and 14 DRAA programs and activities. The 13 non-DRAA programs and activities were (1) USDA's SNAP, (2) USDA's Child and Adult Care Food Program, (3) HHS's TANF, (4) HHS's Advance Premium Tax Credit, (5) HHS's Cost-Sharing Reduction, (6) HUD's Office of Housing Rental Housing Assistance Programs, (7) HUD's HOME Investment Partnership, (8) HUD's Community Development Block Grant, (9) HUD's Single Family Claims, (10) HUD's Ginnie Mae Contractor Payments, (11) Department of the Treasury's (Treasury) Advance Child Tax Credit, (12) Treasury's Additional Opportunity Tax Credit, and (13) Treasury's Premium Tax Credit.

⁵⁷IPERA established a requirement for entity inspectors general to report annually on entities' compliance with criteria listed in section 3 of IPERA. The six criteria are that the entity has (1) published an annual financial statement and accompanying materials in the form and content that OMB requires for the most recent fiscal year and posted that report on the entity website; (2) conducted a risk assessment for each specific program or activity that conforms with IPIA, as amended; (3) published estimates of improper payments for all programs and activities identified as susceptible to significant improper payments under the entity's risk assessment; (4) published corrective action plans for programs and activities assessed to be at risk for significant improper payments; (5) published and met annual reduction targets for all programs and activities assessed to be at risk for significant improper payments; and (6) reported a gross improper payment rate of less than 10 percent for each program and activity for which an improper payment estimate was obtained and published. The most recent inspector general reports on compliance with the criteria listed in IPERA were issued in 2017 for fiscal year 2016. Pursuant to the OMB implementing guidance in OMB Memorandum M-15-02, appendix C to OMB Circular No. A-123, *Requirements for Effective Estimation and Remediation of Improper Payments* (Oct. 20, 2014), inspector general reports are due within 180 days of publication of the performance and accountability reports or agency financial reports. Therefore, inspector general reports on fiscal year 2017 compliance with the criteria listed in IPERA are generally expected to be issued by May 2018.

accurately assess the risk of improper payment. For example, the Department of Defense (DOD) Inspector General reported that DOD did not ensure that all required payments were included in certain programs' improper payment estimates, and as a result, DOD published unreliable estimates of improper payments for fiscal year 2016.⁵⁸

For fiscal year 2017, federal entities reported estimated improper payment rates of 10 percent or greater for 17 risk-susceptible programs and activities,⁵⁹ accounting for about 50 percent of the government-wide total of reported estimated improper payments.⁶⁰ Under IPERA, an entity that is determined by its inspector general to not be in compliance with the criteria listed in IPERA, such as reporting an improper payment rate of 10 percent or greater for any risk-susceptible program or activity, must submit a plan to Congress describing the actions that the entity will take to come into compliance.

Further, entity auditors continued to report internal control deficiencies over financial reporting in their fiscal year 2017 financial statement audit reports, such as financial system limitations and information system control weaknesses. Such deficiencies could significantly increase the risk that improper payments may occur and not be detected promptly.

The President's fiscal years 2017 and 2018 budgets included program integrity proposals at multiple agencies aimed at reducing improper payments. Also, efforts continue to implement requirements established by IPERIA, which was enacted in January 2013, to intensify efforts to identify, prevent, and recover payment error, waste, fraud, and abuse in federal spending. Among other things, IPERIA established a statutory Do Not Pay initiative, requiring entities to review prepayment and preaward procedures and ensure a thorough review of available databases to determine program or award eligibility before the release of any federal funds. IPERIA also directs OMB to annually identify a list of high-priority federal programs for greater levels of oversight and review and requires each entity responsible for administering one of these high-priority programs to annually submit a program report to its inspector general and make a report copy available to the public.

Until the federal government has implemented effective processes to determine the full extent to which improper payments occur and has taken appropriate actions across entities and programs to effectively reduce improper payments, it will not have reasonable assurance that the use of federal funds is adequately safeguarded.

⁵⁸Department of Defense, Office of Inspector General, *The DoD Did Not Comply with the Improper Payment Elimination and Recovery Act in FY 2016*, Report No. DODIG-2017-078 (Alexandria, Va.: May 8, 2017).

⁵⁹The improper payment rate reflects the estimated improper payments as a percentage of total outlays.

⁶⁰The 17 programs and activities that reported estimated improper payment rates of 10 percent or greater for fiscal year 2017 were (1) VA's Community Care; (2) VA's Purchased Long-Term Services and Supports; (3) VA's Prosthetics; (4) VA's Beneficiary Travel; (5) VA's Communications, Utilities, and Other Rent; (6) VA's Supplies and Materials; (7) VA's Medical Care Contracts and Agreements; (8) Treasury's Earned Income Tax Credit; (9) USDA's School Breakfast; (10) USDA's National School Lunch; (11) the Federal Communications Commission's Universal Service Fund Lifeline; (12) the Corporation for National and Community Service's (CNCS) Foster Grandparent; (13) CNCS's Senior Companion; (14) CNCS's AmeriCorps; (15) the Small Business Administration's Disaster Loan Disbursements; (16) the Department of Labor's Unemployment Insurance; and (17) HHS's Medicaid programs.

Information Security

GAO has reported information security as a high-risk area across government since February 1997. During our fiscal year 2017 audit, we found that serious and widespread information security control deficiencies continued to place federal assets at risk of inadvertent or deliberate misuse, financial information at risk of unauthorized modification or destruction, sensitive information at risk of inappropriate disclosure, and critical operations at risk of disruption.⁶¹ Specifically, control deficiencies were identified related to (1) security management; (2) access to computer resources (data, equipment, and facilities); (3) changes to and configuration of information system resources; (4) segregation of incompatible duties; and (5) contingency planning.

Such information security control deficiencies unnecessarily increase the risk that data recorded in or transmitted by federal financial management systems are not reliable and available. A primary reason for these deficiencies is that federal entities generally have not yet fully institutionalized comprehensive security management programs, which are critical to identifying information security control deficiencies, resolving information security problems, and managing information security risks on an ongoing basis.

Although significant challenges remain, the federal government has continued to take actions for improving information security. For example, in May 2017, the President issued an executive order on strengthening the cybersecurity of federal networks and critical infrastructure.⁶² Among other things, the order intends to hold executive agency heads accountable for managing agency-wide cybersecurity risk. In addition, it requires each executive agency to use the National Institute of Standards and Technology's Cybersecurity Framework to manage cybersecurity risk.⁶³ Nevertheless, GAO and other auditors continued to identify information security control deficiencies at federal entities. Until entities identify and resolve these deficiencies and effectively manage information security risks on an ongoing basis, federal data and systems, including financial information, will remain at risk.

Tax Collection Activities

During fiscal year 2017, a material weakness continued to affect the federal government's ability to effectively manage its tax collection activities. While the Department of the Treasury's Internal Revenue Service (IRS) made necessary and appropriate adjustments to its financial statements, IRS's underlying records did not always reflect the correct amount of taxes owed by the public to the federal government due to financial system limitations and other control deficiencies that led to errors in taxpayers' accounts. Such errors place undue burden on taxpayers who either have already paid taxes owed or owe significantly lower amounts than recorded.

⁶¹Eighteen of the 24 agencies covered by the Chief Financial Officers Act of 1990 reported information security as a significant deficiency or material weakness for fiscal year 2017.

⁶²Executive Office of the President, *Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure*, Exec. Order No. 13,800 of May 11, 2017, 82 Fed. Reg. 22,391 (Washington, D.C.: May 16, 2017).

⁶³National Institute of Standards and Technology, *Framework for Improving Critical Infrastructure Cybersecurity*, Draft Version 1.1 (Gaithersburg, Md.: Jan. 10, 2017).

Collectively, these deficiencies indicate that internal controls were not effective in (1) ensuring that reported amounts of taxes receivable and other unpaid assessments were accurate on an ongoing basis and could be relied upon by management as a tool to aid in making and supporting resource allocation decisions and (2) supporting timely and reliable financial statements, accompanying notes, and required supplementary information and other information without extensive supplemental procedures and adjustments.

Appendix IV

Significant Deficiencies

In addition to the material weaknesses discussed in appendixes II and III, we found two significant deficiencies in the federal government's internal control related to implementing effective internal controls at certain federal entities, as described below.

Loans Receivable and Loan Guarantee Liabilities

Internal control deficiencies were identified at certain significant component entities accounting for the majority of the reported balances for loans receivable and loan guarantee liabilities.⁶⁴ The deficiencies primarily involved credit subsidy estimation and internal control over such estimation. The issues and complexities associated with estimating the costs of lending and other loan-related financing activities significantly increase the risk that misstatements in agency and government-wide financial statements could occur and go undetected. Further, these control deficiencies can adversely affect the federal government's ability to support annual budget requests for these programs, make future budgetary decisions, manage program costs, and measure the performance of lending activities.

Federal Grants Management

In fiscal year 2017, several federal entities' auditors continued to identify internal control deficiencies related to grants management.⁶⁵ Reported deficiencies primarily related to monitoring of grant activities, accounting for formula grants, and estimating grant accruals.⁶⁶ These internal control deficiencies could adversely affect the federal government's ability to provide reliable financial statements as well as reasonable assurance that grants are awarded properly, recipients are eligible, and federal grant funds are used as intended.

⁶⁴Key significant component entities contributing to the significant deficiency for Loans Receivable and Loan Guarantee Liabilities include the Departments of Education, Transportation, Housing and Urban Development, and Veterans Affairs; the Export-Import Bank of the United States; and the Small Business Administration.

⁶⁵Key significant component entities contributing to the significant deficiency for Federal Grants Management include the Departments of Homeland Security, Housing and Urban Development, and Health and Human Services.

⁶⁶Formula grants are awarded to all eligible grantees based on a statutory allocation formula, which may be based on a number of variables, including population, poverty rate in a given area, or tax effort. The grants are typically awarded to states, which often pass funds through to eligible local government agencies and nonprofit organizations.
